

PROCEDURE OF WRITING A LAB REPORT -CHEMISTRY REPORTS

Cover page

Name: _____

Reg no: _____

Unit code: _____

Unit title: _____

Name of Lecturer: _____

Title of experiment: _____

Date: _____

Name of partners: (Group members' names and their registration number)

Aim of experiment

Write a brief description of what the exercise sets out to achieve.

Theory

Write a brief account of the theoretical principles behind the exercise.

*Do not simply copy the material from the manual.

Requirements/Materials

SIR OTONDE MICHAEL AWITI-DELEGATE

This section provides an overview of equipment, apparatus or any other substances used in the experiment. If using any specific amounts of materials, make sure the amount is listed.

Eg. 1.13mg of Na

Method/Procedure

A summary of experimental procedure in the third person, past tense, passive voice.

Eg. The solutions were prepared.....

Please describe what you actually did during the experiments, noting especially any variations from that which is set in the manual, and not what you think you ought to have done.

If you had difficulties and omitted part of the procedure, say so.

Results

A concise record of your experimental data, preferably in tabular form.

*Do not intersperse this with calculations, discussions, etc.

If using graphs, charts or other figures, present them in this section.

Particular attention is drawn to units. Units (SI) are to be given at the head of each column of a table, on both axes of a

graph and with all numerical results.

Calculations

A logical account of the way in which the final results were obtained from the experimental data. Please give sufficient details for calculations to be followed by someone else. There is no need to show how you calculated every result that you have shown in your table. One example is enough to demonstrate how the rest of the calculations were done.

Discussion

An account of the significance of your results, comparison with literature values, discussion of errors and their sources, if applicable.

Conclusion

Clearly state your final results and relate them to the aim given earlier.

*Do not include discussion material here.

References

List journal articles or sections of textbooks that you have consulted for specific information. The denominator will give

SIR OTONDE MICHAEL AWITI-DELEGATE

you the format that you can use to write references.

*NOTE

Do not include books or articles that you have not consulted.

*For neatness, every section can be written on a fresh page.

THE END
