DEPARTMENT LIBRARY & INFORMATION SCIENCE**

ISC 102: CATALOGUING I

WRITTEN BY

FRIDAH G. KIAMBATI

2020

SIR OTONDE MICHAEL AWITI-DELEGATE

INTRODUCTION

In library and information science, cataloging (or cataloguing) is the foundation of librarianship. This unit aims at introducing learners to the concept of cataloguing and other related concepts and to prepare them to undertake other advanced courses related to cataloguing. In particular it will introduce learners to cataloguing, library catalogue, functions of a library catalogue, cataloguing codes and give reasons why they are used, forms of catalogues, different kinds of catalogue in use today and comparison of the major kinds of catalogue in use today.

SIR OTONDE MICHAEL AWITI-DELEGATE

COURSE LEARNING OUTCOMES

By the end of the unit, the student will be able to:

1. Acquire knowledge in the principles of cataloguing
2. Familiarize themselves with major cataloguing tools
3. Demonstrate understanding of descriptive and subject cataloguing
4. Cultivate positive attitudes towards cataloguing as applied in the field of library science

SIR OTONDE MICHAEL AWITI-DELEGATE

COURSE DESCRIPTION

This is a blended learning course that will utilize the flex model. This means that learning materials and instructions will be given online and the lessons will be self-guided with the lecturer being available briefly for face to face sessions and support and also on-site (online) most of the time. Your lecturer will introduce a lesson and put it into perspective and you will actively participate in your search for knowledge by undertaking several online activities. This means that some of the instructional hours of the course will be delivered face to face while other lessons will be taught online through various learner and lecturer activities. It is important for you to note that one instructional hour is equivalent to two online hours. Three instructional hours will be needed per week. Out of these, one will be used for interaction with your lecturer (also referred as e-moderator in the online activities) while the other two instructional hours (translating to four online hours) will be used for online activities otherwise referred to as e-tivities in the lessons. You are advised to cover at least a lesson every week.

You will be required to participate and interact online with your peers and the e-moderator who in this case is your lecturer. Guidelines for the online activities (which we shall keep referring to as e-tivities) will be provided whenever there is an e-tivity. Please note that since the online e-tivities are part of the learning process, they may be graded at the discretion of your e-moderator. Such grading will however be communicated in the e-tivity guidelines and feedback given as soon as possible after the e-tivity. The e-tivities will include but will not be limited to online assessment quizzes, assignments and discussions. There are also assessment questions that you can attempt at the end of every lesson to test your understanding of the lesson. All the resources that have been used in this module in form of books are available under the resources section after every lesson.

SIR OTONDE MICHAEL AWITI-DELEGATE

COURSE OUTLINE

PERIOD	TOPIC
WEEK 0	INTRODUCTION
WEEK 1 & 2	CONCEPT DEFINITIONS, OBJECTIVES AND FUNCTIONS OF A LIBRARY CATALOGUE
WEEK 3	THE ESSENTIAL PARTS OF A BASIC CATALOGUE ENTRY
WEEK 4	CATALOGUING CODES
WEEK 5 & 6	MAJOR CATALOGUING CODES
WEEK 7 & 8	PHYSICAL FORMS OF CATALOGUE

SIR OTONDE MICHAEL AWITI-DELEGATE

WEEK 9	COMPUTER BASED FORMS OF CATALOGUES
WEEK 10 & 11	KINDS OF CATALOGUES
WEEK 12 & 13	EXAMINATION

OVERVIEW OF THE COURSE

Week 0: Introduction (Your Context, Your Goals)

This lesson is intended to help you acclimatize to blended learning and to create a community of learners who will motivate each other during the course. You will be required to introduce yourself to your lecturer and colleagues either physically during a face to face session or even online before other academic interactions start. It will be important to also state your context and goals as well as what you think about cataloguing. You can also share any experience that you may have regarding cataloguing.

Week 1 &2: Concept definitions, Objectives and Functions of a Library Catalogue

This lesson is designed to introduce you to the concept of cataloguing in general and library cataloguing in particular. The understanding of the concept will help you to appreciate the place and importance of cataloguing and catalogues in the organization and retrieval of information in libraries and other information organizations.

Lesson 2: The Essential Parts of a Basic Catalogue Entry

SIR OTONDE MICHAEL AWITI-DELEGATE

In this lesson, you will be introduced to the essential parts of a basic catalogue entry. In addition, this lesson will equip you with knowledge about the importance of each of the part of the basic catalogue entry.

Lesson 3: Cataloguing Codes

This lesson is intended to introduce you to cataloguing codes including justification for their use in libraries. A few important ones will be discussed in detail.

Lesson 4: Major Cataloguing Codes

This lesson is designed to introduce you to specific cataloguing codes. The understanding of the development of various cataloguing codes will help you to appreciate the place and importance of cataloguing codes in the cataloguing of information in libraries and other information organizations.

Lesson 5: Physical Forms of Catalogue

In this lesson you shall study physical forms of catalogue representing the materials and the manner in which the catalogues are made available to library users.

Lesson 6: Computer Based Physical Forms of Catalogues

In this lesson, you will study physical forms of catalogue representing the materials and these are mostly forms that are used with the aid of computers. Eventually we will look at the criteria for choosing a physical form of catalogue

Lesson 7: Kinds of Catalogues

This lesson is designed to address different kinds of catalogue or what is generally referred to as the “inner form” of catalogue. The advantages and disadvantages of the most commonly used ones will also be discussed.

SIR OTONDE MICHAEL AWITI-DELEGATE

SIR OTONDE MICHAEL AWITI-DELEGATE

ASSESSMENT

It is important to note that this module has embedded certain learner formative assessment feedback tools that will enable you gauge your own learning progress. The tools include online collaborative discussions forums that focus on team learning and personal mastery and will therefore provide you with peer feedback, lecturer assessment and self- reflection. You will also be required to do one major assignment/project that is meant to assess the application of the skills and knowledge gained during the course. The major assignment/project score in combination with scores for e-tivities (where graded) will account for 30% of your final examination score with the remaining 70% will be from the final written examination that will be guided by the university examination policy and procedures.

LESSON 1

CONCEPT DEFINITIONS, OBJECTIVES AND FUNCTIONS OF A LIBRARY CATALOGUE

1.1: Introduction

This lesson is designed to introduce you to the concept of cataloguing in general and library cataloguing in particular. The understanding of the concept will help you to appreciate the place and importance of cataloguing and catalogues in the organization and retrieval of information in libraries and other information organizations.

1.2 Lesson learning outcomes

By the end of this lesson, you will be able to:

- 1.2.1 Define cataloguing and explain its meaning.
- 1.2.2 Define library catalogue and distinguish it from other catalogues.
- 1.2.3 Describe the functions of a library catalogue

1.2.1 Cataloguing

SIR OTONDE MICHAEL AWITI-DELEGATE

It is not easy to define the concept “Cataloguing” straight away without first defining other related terms, the most important being “Catalogue”.

The word “Catalogue” means a list of anything. When a person prepares a list of items he/she is going to buy from a supermarket, this list qualifies to be called a catalogue.

When a person prepares a list of activities he/she wants to accomplish within a given period of time, the list can also be referred to as a catalogue.

An itinerary, which is a list of places to be visited on a tour is also a catalogue. But then, what is a library catalogue? This is a list of books and other literary items in a particular library or collection, arranged in a systematic and recognizable order. It records and describes the resources of a library or a group of libraries. When it reflects the contents of two or more libraries, it is referred to as a Union Catalogue. It therefore follows that, any list which is not in a systematic or particular order cannot be described as a library catalogue. A library catalogue is also different from a bibliography which is not confined to the contents of a particular library or group of libraries.

A bibliography for our purpose is defined as a “list of books and sometimes of other materials such as periodical articles and even illustrations written by one author, or on one subject, or printed by one printer, or in one place, or during one period”.

The term library itself is defined as a collection of books and other literary items kept in a particular place for reading, study or consultation, and arranged in a systematic order so that any one particular item may be found within the shortest period of time possible. Without systematic arrangement, a collection of books cannot be referred to as a library.

Having defined the above concepts, we can now turn to the term cataloguing which

SIR OTONDE MICHAEL AWITI-DELEGATE

is the central concept in this lesson. Cataloguing is the process of compiling a list of books and other literary items according to a set of rules, so as to enable the library and its users, and through the medium of classification, to locate any particular item in the library.

Cataloguing can also be said to be simply the process of compiling a catalogue or constructing entries for insertion into a catalogue.

e-tivity 1.2.1: The concept of cataloguing

Numbering, pacing and sequencing	1.2.1
Title	Concept of cataloguing
Purpose	The purpose of this e-tivity is to enable you to explain the concept of cataloguing as it applies to library resources
Brief summary of overall task	Watch Video 1 and then explain the concept of cataloguing as it applies to library resources
Spark	EXPLAIN THE CONCEPT OF CATALOGUING
Individual task	In about 150 words explain the concept of cataloguing as used in the library setting
Interaction begins	a) Post your work on the discussion forum 1.2.1 b) View the examples posted by your colleague students. c) Comment of 4 examples posted keeping netiquette in mind d) Check out for comments given by other students on your posted work.
E-moderator interventions	1. Ensure that learners are focused on the contents and context of discussion.

SIR OTONDE MICHAEL AWITI-DELEGATE

	2. Stimulate further learning and generation of new ideas. 3. Provide feedback on the learning progress. 4. Closing the e-tivity
Schedule and time	This task should take two hours
Next	Functions of a library catalogue

1.2.2 Library Catalogue

Having defined relevant concepts that are necessary for the understanding of the subject cataloguing, it is now appropriate to delve into the area of objectives and functions of a library catalogue in the context of organization and retrieval of information.

Objectives

These can also be referred to as the purposes of a library catalogue, or the role a library catalogue plays in the realm of organization and retrieval of information. Without the objectives, a catalogue can hardly justify its existence in a library. Briefly, the objectives of a library catalogue are:

1.2.1.1 To enable a person to find a book of which:

1.2.1.1.1 The author is known

1.2.1.1.2 The title is known

1.2.1.1.3 The subject is known

1.2.1.2 To show what the library has:

d) By a given author

e) On a given subject

f) In a given kind of literature.

1.2.1.3 To assist in the choice of a book:

g) As to its edition (Bibliographically)

h) As to its character (Literary or topical).

These objectives were formulated by Charles Ammi Cutter way back

SIR OTONDE MICHAEL AWITI-DELEGATE

in 1876, but still remain pertinent to us today.

Expressed differently, all the above mean that:

- a) If a person knows the name of an author, it is the objective of the catalogue to help him/her to find whatever book he/she is looking for by that author.
- b) If a person has a given title in mind, it is the objective of the catalogue to assist him/her to trace that book by its title in the library.
- c) The catalogue should also assist a person to trace a book in the library if he knows its subject.
- d) If a person is interested to establish what books the library has by a given author -
– say Meja Mwangi, the catalogue should assist him to establish this.
- e) If a person has a given subject in mind – say chemistry and wants to obtain books on it, the catalogue should be in a position to enable him establish what books on chemistry are in the library.
- f) If a person wants to know what books on, say poetry, drama, fiction etc., the catalogue should help him/her to establish this. Included here also are such forms as encyclopaedias, yearbooks etc, which a catalogue should help a person to trace in the library.
- g) If a person is interested in a particular edition of a given title in the library, the catalogue should assist him/her to establish whether that edition is in the library.
- h) If a person wants a book of a certain character – say according to the level of readership, or on a certain specific topic, the catalogue should assist him/her to make the proper choice.

e-tivity 1.2.2: Library catalogue

Numbering, pacing and sequencing	1.2.2
Title	Meaning of a library catalogue
Purpose	The purpose of this e-tivity is to enable you to explain the meaning of a library catalogue

SIR OTONDE MICHAEL AWITI-DELEGATE

Brief summary of overall task	Watch this video and this video and then explain the meaning of a library catalogue and distinguish it from other catalogues.
Spark	What is a Library Catalogue?
Individual task	In not more than 200 words, explain the meaning of a library catalogue and distinguish it from other catalogues.
Interaction begins	1) Post your work on the discussion forum 1.2.2 2) View the examples posted by your colleague students. 3) Comment of 4 examples posted keeping netiquette in mind 4) Check out for comments given by other students on your posted work.
E-moderator interventions	• Ensure that learners are focused on the contents and context of discussion. • Stimulate further learning and generation of new ideas. • Provide feedback on the learning progress. • Closing the e-tivity
Schedule and time	This task should take two hours
Next	Functions of a library catalogue

1.2.3 Functions of Library Catalogue

In order for the catalogue to achieve the objectives stated above, it must perform certain activities. These activities are known as the functions of a library catalogue. These are:

- (i) To record each work in the library by its author, editor, translator, commentator, illustrator, series, or by any other person, body or name, under which a reader might look. This function fulfils objective 1(a) through

SIR OTONDE MICHAEL AWITI-DELEGATE

provision of author entries.

- (ii) To arrange author entries in such a way that all works by the same author are collected together. This procedure makes it possible for readers to either find a specific work, or to survey the literary output of an author, as represented in the library. This function fulfils objectives 1(a) and 2(d).
- (iii) To record each work, and even parts of a work, under the subject it deals with. This function fulfils objectives 1(c), 2(e) and 2(f).
- (iv) To arrange subject entries so that like topics will fall together and related topics will be correlated – i.e. they will be systematically or reciprocally connected. This function fulfils objectives 1(c) and 2(e).
- (v) To provide title entries as necessary. This function fulfils objective 1(b).
- (vi) To employ the necessary cross-references by which a reader may be guided from one entry in the catalogue to another. This function fulfils several objectives particularly those relating to authors, subjects and even titles of books.
- (vii) To provide a sufficient description of each work in the library such that each title, and even different editions of the same title, will be distinguished from all others. This function fulfills several objectives but in particular number 3(g).
- (viii) To record the call number of each work by which it can be located on the shelves of the library. This function fulfills most of the objectives since the ultimate aim of a library user is usually to locate a particular work in the library once he/she traces it in the catalogue.

Ranganathan who is better known in the field of library classification has wrapped up all the functions of the catalogue under the following headings:

“Disclose to every reader his or her document;
Secure for every document its readers;
Save the time of the reader and for this purpose,
Save the time of the staff”.

e-tivity 1.2.3: Functions of a library catalogue

SIR OTONDE MICHAEL AWITI-DELEGATE

Numbering, pacing and sequencing	1.2.3
Title	Functions of a library catalogue
Purpose	The purpose of this e-tivity is to enable you to explain the functions of cataloguing in a library setting
Brief summary of overall task	Watch this video and video 2 and then explain the functions of cataloguing in the library setting
Spark	What are the objectives of cataloguing as explained by Charles Ammi Cutter?
Individual task	In a list of five items, explain the functions of cataloguing in the library setting
Interaction begins	5) Post your work on the discussion forum 1.2.3 6) View the examples posted by your colleague students. 7) Comment of 4 examples posted keeping netiquette in mind 8) Check out for comments given by other students on your posted work.
E-moderator interventions	• Ensure that learners are focused on the contents and context of discussion. • Stimulate further learning and generation of new ideas. • Provide feedback on the learning progress. • Closing the e-tivity
Schedule and time	This task should take two hours
Next	Essential parts of a basic catalogue entry

2.3 Summary

In this lesson we have defined various concepts such as catalogue, cataloguing, bibliography, library and library catalogue. We have also covered objectives of a library catalogue that is why a catalogue exists in a library and functions of a library catalogue that is the activities that a catalogue must perform.

2.4 Assessment questions

1. A library Catalogue can be defined as:
 - A. The details found in a catalogue entry
 - B. A list of activities one wants to do in a library
 - C. A list of books and other resources arranged systematically in a library
 - D. A systematic arrangement of online resources in a library website
2. Cataloguing is an Important concept used in a library. Which of the following statements best describes what cataloguing is?
 - A. It is the central concept used in a library with regard to book arrangement
 - B. It is the process of compiling a list of books and other library items according to a set of rules.
 - C. It is a process that enable library users to locate a particular book in a library
 - D. It is the process of determining where every book will be found on the library shelf
3. Ranganathan summed up the functions of the library catalogue under the following headings. Which one is not?

SIR OTONDE MICHAEL AWITI-DELEGATE

- A. Every document its reader
- B. Every document its author
- C. Save time of the user
- D. Save time of the library staff

LESSON 2: THE ESSENTIAL PARTS OF A BASIC CATALOGUE ENTRY

2.1: Introduction

This lesson is designed to introduce you to the essential parts of a basic catalogue entry. In addition, this lesson will equip you with knowledge about the importance of each of the part of the basic catalogue entry.

3.2 Learning outcomes

By the end of this lesson, you will be able to:

- 2.2.1 Explain elements of a basic catalogue entry using a sample
- 2.2.2 Discuss importance of the various parts of the basic catalogue entry

2.2.1 Basic Catalogue Entry

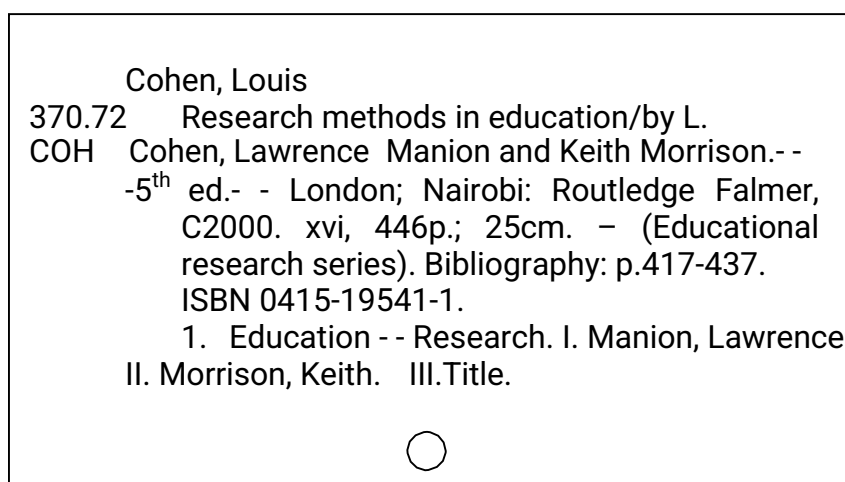

It is necessary at this stage to indicate what constitutes a catalogue entry. A catalogue entry is a record of a publication or other literary item in a catalogue. It

SIR OTONDE MICHAEL AWITI-DELEGATE

consists of bibliographic details that are necessary for the complete identification of the item. These are details that will help a library user to distinguish one title from another and even one edition of a title from another of the same title.

The amount of detail to be included in a library catalogue entry is dependent on the purpose of the catalogue and varies from library to library. However, the standard or basic catalogue entry has the details included in the following sample entry.

Figure 1: Sample basic catalogue entry

Key for figure 1

1. Heading
2. Title and statement of responsibility
3. Edition statement
4. Publication, distribution, etc details
5. Physical description details
6. Series statement
7. Notes
8. International standard book number
9. Tracings
10. Call number.

6. The Heading

This is the name, word, words or phrase at the beginning of a catalogue entry by which the position or place of the entry in the catalogue is determined.

The heading is chosen by the cataloguer to indicate some special aspect of the work catalogued e.g. authorship, series, title, subject, literary form etc.

Generally, main entry headings will consist of the name of an author, editor, compiler etc. An author can be either personal or corporate.

The choice of headings and the form in which each is to appear in the catalogue entry are usually determined by reference to a code of cataloguing rules such as the Anglo- American cataloguing rules.

2. The Title and Statement of Responsibility Area

This is part of the main body of the catalogue entry, which is also the descriptive part which identifies the document and shows the user or reader whether or not the document is the one he is looking for. This part of the catalogue entry includes the title of the document followed by any sub-title or alternative title. These elements are followed by the author statement if this is necessary. According to the Anglo-American cataloguing rules, the author statement can be omitted if its inclusion means repeating the name found on the heading of the catalogue entry and constitutes only simple authorship. If, however, the document being catalogued is by more than one author, or has been edited, compiled, translated etc., an author statement to bring out this function should be included.

3. Edition Statement Area

The statement of edition follows the author statement, if there is one, otherwise it follows the title. The edition statement is, however, only given if the work being catalogued is any other than the first edition. The edition statement is important in

SIR OTONDE MICHAEL AWITI-DELEGATE

assisting library users in the choice of the exact edition required.

4. Publication, Distribution, etc. Area (Formerly known as Imprint)

This is the part of entry which gives publication details and it follows the edition statement. The details included here are: place of publication, name of publisher and the date of publication.

5. Physical Description Area (Formerly known as Collation)

This follows publication, distribution etc. details and is normally recorded on a different paragraph from these details. The function of this area is to describe the physical makeup of the document being catalogued.

Details included in this area are:

- (i) The number of pages in the case of a one volume work, and the number of volumes in the case of a work in more than one volume.
- (ii) The kinds of illustrations included and their numbers, if this can be easily ascertained.
- (iii) The size of the book. Usually only the height is given to the next whole centimetre. However, in the case of narrow, square or oblong books, both the height and width are given.

6. Series Area

This is also known as “series note”. It is usually recorded immediately following details of physical description on the same line. It is, however, enclosed in parenthesis.

This statement gives the name of the series to which the document belongs and the number of the document in the series, if any.

7. Notes

Notes are of various kinds but the commonest are contents notes. If for instance the book contains such features as bibliographies, these are given in this area.

8. Standard Book Number

SIR OTONDE MICHAEL AWITI-DELEGATE

If a book has either a standard or international standard book number, this should be included in the catalogue entry.

9. Tracings

This is a record on the main entry card indicating other headings under which the publication will be found. In other words, it is a list of headings under which added entries have been made.

10. Call Number

After a document has been bibliographically described, its shelf location in the library too must be indicated because the ultimate aim is to trace the document in the library.

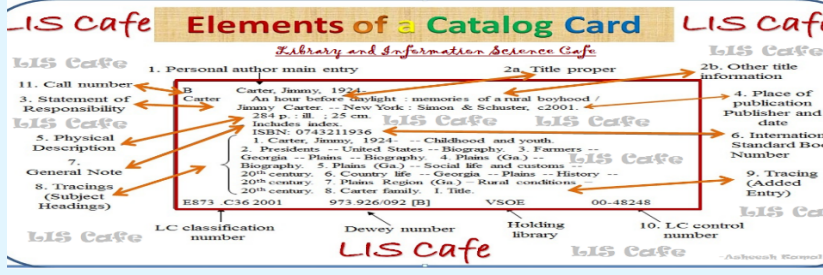

Usually, a reader does not need to read the entire catalogue entry before deciding to look for the location of the item on the shelves. Therefore, the position of the call number in the catalogue entry should be conspicuous. More often than not, it is placed on the left hand side of the catalogue entry or top right hand corner.

The call number is made up of the class number and the book number. It should include the proper prefixes to indicate the actual location of the book in relation to other books in the library. Common prefixes are Ref. for Reference, Afr. for Africana, TPC for Teaching Practice Collection etc.

E-tivity 2.2.1: Essential parts of a basic catalogue entry

Numbering, pacing and sequencing	2.2.1
Title	Essential parts of a basic catalogue entry
Purpose	The purpose of this e-tivity is to enable you to describe the essential parts of basic catalogue entry.
Brief summary of overall task	Watch this video and then describe four (4) essential parts of basic catalogue entry commenting on importance of each

SIR OTONDE MICHAEL AWITI-DELEGATE

Spark	 The diagram shows a sample catalog card for 'Carter, Jimmy, 1924-'. The card is divided into sections: 1. Personal author main entry, 2a. Title proper, 2b. Other title information, 3. Statement of Responsibility, 4. Place of publication, publisher and date, 5. Physical Description, 6. International Standard Book Number, 7. General Note, 8. Tracings (Subject Headings), 9. Tracing (Added Entry), 10. LC control number, and 11. Call number. Arrows point from 'LIS Cafe' labels to each of these elements.
Individual task	In about 200 words, describe four essential parts of basic catalogue entry and comment on the importance of each.
Interaction begins	1) Post your work on the discussion forum 2.2.1 2) View the examples posted by your colleague students. 3) Comment of 4 examples posted keeping netiquette in mind 4) Check out for comments given by other students on your posted work.

Schedule and time	This task should take two hours
Next	Cataloguing codes

3.3 Assessment questions

1. The following are elements of a catalogue entry. Which one is not?

- A. Physical description area
- B. Edition statement
- C. Call number
- D. Cataloguing code

SIR OTONDE MICHAEL AWITI-DELEGATE

2. The following statements describe a catalogue entry. Which one is the odd one out?

- A. it is a record of a publication in a catalogue
- B. consist of details that help a library user distinguish one title from another.
- C. it is a record of important publications found in a library
- D. Contain details that are necessary for complete identification of a publication

3. Which one of the following should not be included in the title and statement of responsibility area of a catalogue entry?

- A. Title of the document
- B. Brief description of the document
- C. Alternative title of the document
- D. Sub-Title of the document

SIR OTONDE MICHAEL AWITI-DELEGATE

LESSON 3: CATALOGUING CODES

3.1 Introduction

In the previous lesson, we looked at catalogues and cataloguing as well as the objectives or purposes and functions of library catalogues. We also looked at the essential parts of a catalogue entry. Finally, we surveyed the historical development of catalogues and cataloguing.

In order for a library catalogue to meet its objectives and functions, it must be prepared in accordance with certain set rules. Such rules are generally contained in what are referred to as Cataloguing Codes.

In this lesson, we shall discuss cataloguing codes including justification for their use in libraries. A few important ones will be discussed in detail.

3.2 Learning outcomes

By the end of this lesson, you will be able to:

3.3.1 Give a history of cataloguing codes

3.3.2 Define cataloguing codes and give reasons why they are used

3.2.1: Historical Survey of Cataloguing and Catalogues

The history of library cataloguing and catalogues cannot be separated from that of librarianship. This is because librarianship is first and foremost the collection, organization, preservation, dissemination and use of recorded communication. Both cataloguing and classification form the core of the part of librarianship known as “organization.”

The earliest known librarian was AMILANU – a Babylonian who lived around 1700 B.C. The well-known Library of Nineveh was founded in the year 700BC. But the very first library of the Babylonians was built in the 17th century B.C. When this library was dug up, it was found out that those ancient librarians had considerable experience in matters pertaining to both cataloguing and classification.

But besides the Babylonians, there were other early civilizations that had libraries as old and as advanced as those of Babylon.

Of greater interest to us here, however, is the catalogue. The oldest known catalogue is that of the Library of Edfu in Upper Egypt. This catalogue is said to have been engraved on the walls of the library. It is also presumed to have consisted of a mere listing of books. But we are told that even before 700 B.C., cataloguing was such a commonplace thing in libraries that, nobody thought it worthwhile either to make or preserve any records as to the methods of compiling catalogues in use then.

Four centuries after the founding of the Library of Nineveh (i.e. around 300 B.C.), the libraries of Ptolemies came into being at Alexandria. At this time, books were in the form of papyrus rolls unlike the earliest books which were in form of clay tablets. Also, the form of writing known as Cuneiform had been replaced by letters written in ink.

SIR OTONDE MICHAEL AWITI-DELEGATE

We are told that the second person to be appointed the librarian of Alexandrian Library – known as CALLIMACHUS devised a classified catalogue, which was arranged in 120 classes.

Callimachus is said to have included in his catalogue not only the title of each work catalogued but also a brief analysis of it and its author's biographical note. We are told by a notable cataloguer- - Dorothy May Norris that the year 240 B.C. can give us a work which was a classified catalogue, a bibliography and a biographical dictionary, all in one.

In the 8th century A.D., Gregory the Great is said to have given the catalogue of a collection of books to the Church of St. Clement in Rome. The catalogue was written in form of a prayer.

In the early days, library catalogues were generally found in monasteries, cathedrals, and later in universities. This is logically because these are the places where large collections of books were also found.

Entries in these catalogues were very brief and the main objective of the catalogue was to provide an inventory of stock (Equivalent to the present day's accessions register). The arrangement of the entries was therefore in the order of books as arranged on the shelves

-- which was also as books were added to stock.

Systematically – arranged catalogues began to appear only in the 13th and 14th centuries A.D.

From the historical study of catalogues, one finds that cataloguers were for a long time groping for a system. For instance, location of books as a function of the catalogue was not appreciated until the 14th century A.D.

Again, the use of the alphabetical order in author catalogues was not common until the 16th century A.D. and even the earliest known example of co-operative

SIR OTONDE MICHAEL AWITI-DELEGATE

cataloguing – Registrum Librorum Angliae (1250-1296) which resulted in a union catalogue – although arranged by author, was not an alphabetical list.

But by the 18th century, catalogues had began to change from being mere inventories to becoming finding lists. The surname entry was usual and important additions like notes and references were becoming common.

The card catalogue was introduced first at the Paris Academy of Sciences in 1743 and also in Bibliotheque Nationale in France.

The first printed catalogue of the British Museum was produced in 1787.

In the U.S., notable early catalogues were those of Havard and Yale Universities. Indeed, the earliest known alphabetico-classed catalogue is the Harvard University catalogue of 1790.

3.2.2 Cataloguing Codes

A cataloguing code is a set of rules for the guidance of cataloguers in establishing headings and preparing entries for a catalogue. The use of cataloguing codes is generally meant to ensure consistency in catalogue records. Although cataloguing codes are basically meant for use in descriptive cataloguing, they may also include rules for subject cataloguing and for filing and arranging entries.

The consistency referred to above is one that will ensure that different works by the same author are always entered under the same form of heading. It therefore follows that, different libraries using the same cataloguing code would be expected to end up with an author's works being recorded in a uniform manner in all the libraries' catalogues.

Originally, cataloguing codes were meant to explain the use of the catalogue to the layman rather than providing rules to be followed by cataloguers. This is because, although libraries since the times of classical Greece and Rome caused catalogues to be made, such compilations were more or less finding lists, having little affinity with the present day catalogues, and rarely being compiled according to a logical plan.

SIR OTONDE MICHAEL AWITI-DELEGATE

The present day codes prescribing how the books of a library should be systematically catalogued are a comparatively recent development. Indeed, the most important early code of this nature is the British Museum Code of 91 rules, which was adopted by the trustees of the British Museum in 1839.

Specific Advantages of Using Cataloguing Codes

These have generally been alluded to above. However, the following can be cited as the specific advantages of using cataloguing codes in libraries.

1. The use of cataloguing codes ensures consistency in the preparation of catalogue records. For instance, a cataloguer should not enter one document written by an author under one form of heading, and then later enter another document by the same author under another heading. Through the use of a code therefore, a bibliographic unit of a single author is established and adhered to.

It would also be expected that any libraries using the same code would end up with an author's name being entered in a uniform way in all their catalogues. Such an achievement would make for economy in time on the part of both library staff and readers who use more than one library.

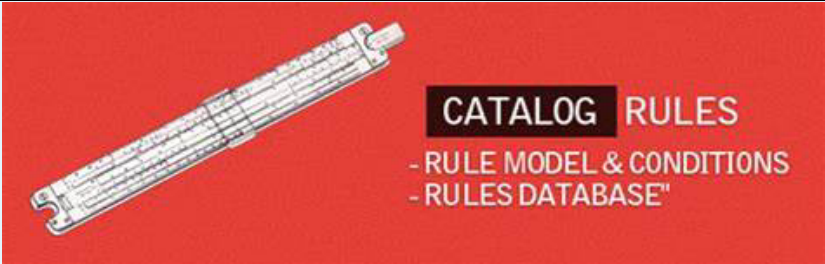

2. A system of centralized cataloguing is likely to become more viable and worthwhile. Centralized cataloguing is the cataloguing by one library, cataloguing office or some central bureau, within a system of libraries, of all books acquired by all these libraries, so that the results of such cataloguing are used by individual libraries. These results are in form of printed entries on cards, or otherwise that are distributed to all the co-operating libraries.
3. A lot of time will be saved in the compilation of union catalogues. A union catalogue is a catalogue reflecting the contents of two or more libraries. It is usually established through co-operative efforts. Contemporary library practice rightly assumes that co-operative ventures work best where libraries use the same systems as far as possible such as cataloguing

SIR OTONDE MICHAEL AWITI-DELEGATE

codes and classification schemes.

4. Since much use of catalogues takes place in conjunction with bibliographies – either general, or special with restricted coverage, uniformity of headings and description between them and library catalogues would lead to improved efficiency. This is particularly important in book selection in which bibliographies are some of the tools used. Where uniformity in headings and description is achieved, unnecessary duplication of resources is easily avoided.
5. If codes did not exist, cataloguers would have to work from scratch with every work they catalogued – from choice of headings to use of punctuations, capitalization, use of numerals and even the arrangement of entries. This would undoubtedly result in too much waste of time, and generally produce more inconsistent catalogues than would even the poorest code.

e-tivity 3.2.2: Cataloguing codes

3.2.3: Contents of an Ideal Cataloguing Code

In order for a cataloguing code to be of maximum benefit to the library in the preparation of catalogues, the code should present the cataloguer with ready-made efficient decisions. An ideal cataloguing code would therefore be expected to include rules relating to:

1. Author main entry headings covering both the choice of heading and the form of heading to be adopted. Here, rules should assist the cataloguer to make a choice

Between several possible main author headings relating to both personal or corporate authorship, and the form the heading should assume.

2. Title main entry headings, again covering both choice and form. The rules should lay down the circumstances that warrant the recording of a work under title as its main entry as opposed to recording it under an author

SIR OTONDE MICHAEL AWITI-DELEGATE

which is the norm.

3. Author and/or title added entry headings: both choice and form. The rules should lay down instances when added entries under authors and titles should be made and give directions or guidelines on how the entries should be made.
4. Author and/or title references: both choice and form. The rules should give guidance as to when author and title references become necessary and how they should be made.
5. Items for inclusion in the description covering both the order in which they are to be recorded and the method in which they are to be given.
6. Presentation of the entry covering punctuations, capitalization, italicization, and recommended layouts for all types of entries and references.
7. Choice and construction of subject headings and references, or subject index entries (This last one is in the case of classified catalogues).
8. Rules to be followed in the filing of resultant catalogue entries.
9. Guidance in limited cataloguing including selective and simplified cataloguing for various needs.
10. Lists of definitions or glossary. This is to help the users of the code to understand some difficult technical terms in the context they are used in the code.
11. Lists of abbreviations, showing where and how they are used in a catalogue entry.

Unfortunately, no single code includes all the above, but most concentrate on the majority of the points.

3.3 Summary

In this lesson we learnt about cataloguing codes. They must function properly and grow with the collection of a library. The entries, description, arrangement and style must be uniform. This is ensured by cataloguing codes. Till about the middle of the 19th century, the catalogues of libraries were based on a set of rules drafted by an individual cataloguer in a casual way on the basis of long tradition and practice prevailing in the library. Hence there was no uniformity in the catalogues of different libraries.

3.4 Assessment questions

1. A cataloguing code consist of rules that are followed in the process of preparing a library catalogue
 - A. True
 - B. False
2. The following are advantages of using a cataloguing code. Which one is not?
 - A. It makes cataloguing system more viable and worthwhile
 - B. It helps cataloguing staff to determine the call number of a book
 - C. It saves time when compiling a union catalogue
 - D. It guides the cataloguer when preparing a catalogue entry
3. An ideal cataloguing code should include rules related to the following. Which one is the odd one out?
 - A. The title main entry
 - B. Author or title added entry
 - C. Use of punctuations, Capitalization and Italicization
 - D. Size of the card catalogue

LESSON 4: MAJOR CATALOGUING CODES

4.1: Introduction

This lesson is designed to introduce you to specific cataloguing codes. The understanding of the development of various cataloguing codes will help you to appreciate the place and importance of cataloguing codes in the cataloguing of information in libraries and other information organizations.

4.2 Learning outcomes

By the end of this lesson, you will be able to:

- 4.2.1 Explain cataloguing codes from up from 1905 backwards
- 4.2.2 Discuss cataloguing codes developed between 1906-1949
- 4.2.3 Discuss cataloguing codes developed after 1950

4.2.1 Major Cataloguing Codes

Many cataloguing codes have been developed over the years some of which have

SIR OTONDE MICHAEL AWITI-DELEGATE

died a natural death while others continue to develop and flourish in response to the needs of libraries and other cataloging agencies. Some of the important ones developed to date are:

The British Museum Code

The Prussian Instructions: Rules for Alphabetical Catalogues of the Prussian Libraries

Cutter Rules for a Dictionary Catalogue, 1876 (4th ed 1904).

Library Association Cataloguing Rules for Author and Title Entries, 1908.

A.A. Cataloguing Rules 1908 (2nd ed. 1941).

Library of Congress Rules for Descriptive Cataloguing in the L.C.

1949. Vatican Library Rules for the Catalogue of Printed Books.

The Anglo-American Cataloguing Rules 1967.

The Anglo-American Cataloguing Rules, 2nd ed. 1978 (Revised Version 1988).

Since it is neither necessary nor feasible to study all the above codes, we shall concentrate on a few that have had a major contribution to the contemporary cataloguing practice.

The British Museum Code

This code was first published in 1841 and the latest revision was published in 1936. On publication, it contained 91 rules that aroused a lot of controversy as they were considered too complicated.

The code was designed for a single library - - The British Museum Library, now known as The British Library. It is the one on which the British Museum's 19th century "Catalogue of printed books" was based. This code was, and still is, used for the compilation of the mammoth 1,000 volume guard-book form of catalogue, and it is from this that the current printed and bound form of the catalogue of printed books has been made.

The rules in the code cover choice and form of headings, description and references, and they deal mainly with printed books and serials. The code, however, also contains supplementary sections on printed maps and music.

SIR OTONDE MICHAEL AWITI-DELEGATE

The importance of this code lies in the fact that it has influenced directly or indirectly other subsequent English language codes. Basically, the code provides that headings should be chosen from information found in the book itself.

Pseudonyms too are allowed as main entry headings. The concept of corporate authorship was first formulated in this code as opposed to the idea of anonymous authorship for publications by corporate bodies. However, the code favours entry of such bodies under place first, e.g. London: British Museum.

To sum up the code:

- The principle of corporate authorship was established by the code but was left a little ragged and over-indirect in heading structure.
- There is an extensive and often confusing use of form headings.
- Some curious entry words result from the apparent attempt to bring to the fore a sought term for the entry of anonymous works.
- In changes of names, etc, the earliest form is preferred.
- Since the British Museum code is the first of its type, it is probably true to say that the code has had a considerable influence on other subsequent English language codes- - sometimes useful, but sometimes “how not to do it”.
- There is no consistent policy of what is to be regarded as the “bibliographic unit”. Lastly, the British Museum code is in need of revision now that the general catalogue of printed books has been completed.

Cutter Rules for a Dictionary Catalogue

These rules were formulated in 1876 by Charles Ammi Cutter, at the height of dictionary catalogue’s popularity. The latest edition was published in 1904. The code is very comprehensive and has rules for the form of entry of personal authors, corporate authors, and titles; main entries, added entries, and references; description; subject and form; limited cataloguing; filing; certain special materials including manuscripts, music, maps and atlases. It also acknowledges paintings, drawings, and statutes as bibliographic units. The rules are accompanied by a great deal of lively discussion, much of it still very relevant today. The Cutter code is very pragmatic in that it provides alternative rules depending on the nature and

SIR OTONDE MICHAEL AWITI-DELEGATE

the size of the library as well as the physical form of catalogue in use. Cutter rightly believes that, no code of cataloguing can be adopted in all points by everyone. The code therefore goes ahead to formulate three (3) styles of cataloguing namely: Short, Medium and Full. (These are equivalent to the three levels of description provided in the Anglo-American Cataloguing Rules, 2nd edition, – to be studied later)

Where Cutter considers that no absolute ruling can be laid down, the convenience of the public – i.e. library users, is to be the final guide. The code therefore provides for entry of a work under the best known name, thus providing for permissiveness in author entries rather than rigidity. Some of the important rules in the code cover married women; change of name; pseudonyms; noblemen; and compound names.

Cutter even suggests double entry where no absolute alternative is satisfactory. Good examples are rules for illustrated books; music; and concordances.

Rules for corporate authorship are more detailed than those of the British Museum Code. Cutter provides for entry of a corporate body under the organization's name unlike the British Museum code. However, it makes an exception for official organizations which should be entered under place first. Cutter undoubtedly has had some influence on later codes as will be observed later.

4.2.2 Codes between 1905-1949

4.2.2.1 The A.A. or Joint Code (1908)

Although this code is sometimes referred to as “international”, it is in fact bilateral in its compilation. It was as a result of combined efforts of committees of the American Library Association (ALA) and the Library Association of U.K. (L.A.). Hence the name Joint Code. These two committees sought to establish unity of cataloguing practice throughout the English-speaking world.

The 1908 code aimed at large libraries of a scholarly character. It includes a total of 174 rules covering choice and form of personal and corporate author and title main entries; added entries; references; and description.

The overall arrangement of the code is reasonably satisfactory. For instance, all rules for corporate authorship are in the same section. In many of its rules, the code aims at academically correct headings and those which are most closely associated with true intellectual responsibility. For this reason, pseudonyms are not allowed, whether or not they are well known, the only exception being when the real name cannot be discovered.

Also, in the case of “diffuse authorship”, the code prefers some form of author entry rather than title entry. The author unit is sometimes carried to inaccurate limits e.g. tendency to prefer original author as main entry for works which have been extensively revised. Also, a concordance to an author’s work being entered under the author concordanced.

Although the two committees agreed on most rules, they differed on 8 rules covering :

- Noblemen
- Concordances
- Change of name
- Married women

SIR OTONDE MICHAEL AWITI-DELEGATE

Anonymous works
Different spellings
and translations
Periodicals - -
change of title.

The code was in two parts:

Part I: Entry and heading – Rules 1 – 135.

Part II: Description – Rules 136 – 174.

The rules for author headings are in two sections –
namely: Personal authors section; and corporate
authors section.

The personal authors section is further
subdivided into: I Under whom as author
II Under what part or form of name.

The Joint Code is criticized for the following weaknesses:

1. Inconsistencies as evidenced by rules 10, 16, 113 and 116 on thematic catalogues and concordances.
2. Omissions - - lack of rules in the section on government publications for reports by committees and commissions.
3. Inadequate definitions e.g. minor divisions and subordinate departments; societies and institutions.
4. Poor examples - - many of which are in German and Latin. Rules for government publications have only American examples.
5. Tendency to ignore author's identity as found in documents, plus the fact that pseudonyms (rule 38) should never be used even though the author may never have written under his real name.
- 6 The question of a collocative and direct catalogue is not settled in the code.
7. Non-author headings are sometimes suggested - - such as in rules for laws and treaties.

SIR OTONDE MICHAEL AWITI-DELEGATE

As early as the 1920s, the AA Code was under heavy criticism and the need for revision was repeatedly expressed. In the 1930s, a committee of the A.L.A. and L.A. began revision work, but the latter dropped out at the outbreak of the Second World War. The ALA continued alone and in 1941, a draft code was produced. The final revision came out in 1949 covering author and title headings only. The rules for descriptive cataloguing were published separately by the Library of Congress as “Rules for descriptive Cataloguing”.

4.2.2.2 The A.L.A. Code (1949)

This code contains rules for headings only but it is a massive volume of 250 pages compared to the 60 pages of the AA code of 1908. For this reason, it is criticized for over-elaboration as it appears to be a supplement and an amendment to the Joint Code rather than a redefinition of principles. However, many of the rules are potentially more useful to the careful cataloguer than the AA 1908 code because the cataloguer is allowed to use his own discretion.

The following are examples of areas in which it improves on the Joint Code:

1. Some rules are re-arranged to make the sequence logical, e.g. rules for joint authors and rules for collections are closely associated as well as rules for all kinds of religious bodies.
2. There are more and better examples than those in the Joint code.
3. The code has also done well by listing more types of literatures such as scenarios (written version of a play in a film production with details of the scenes etc), adaptations, radio scripts etc.
4. The rules for government publications have been extended.
5. There are also a few alterations to specific rules e.g. joint authorship, librettos (The words to which an opera or other lengthy musical composition for voices is set); pseudonyms; and anonymous classics.
6. All American alternatives in the Joint Code have been incorporated.

4.2.2.2 Library of Congress Rules for Descriptive Cataloguing (LCRDC) 1949

This code is on description only and it was intended as a companion to the ALA code of the same year which was on headings only. It was therefore supposed to be used in conjunction with the ALA code to enable a cataloguer to choose the heading element and to determine the form the heading will take. This is because description of a bibliographic unit is of little value without a heading which is meant to provide access to a catalogued item.

In this code, considerable space is devoted to descriptive details for monographs and serials, and elaborate detail on each part of the entry including tracings.

Cataloguing of offprints and supplements is covered as well as analytical entries. Of particular note is the inclusion of rules for the various types of special materials including maps, atlases, and globes; music scores; facsimile copies; and incunabula.

The code has important appendices on definitions (glossary); capitalization; abbreviations; and numerals.

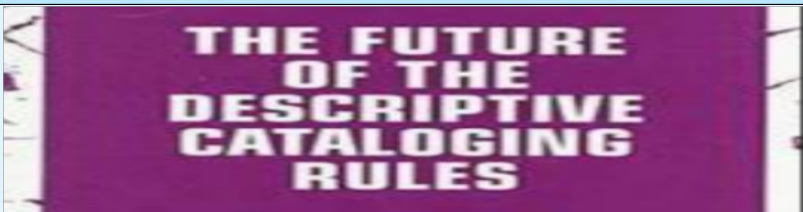

The code also makes it clear that not all libraries will need the amount of detail included, and that it is up to each library to take what it needs.

Finally, it can be stated that, had it not been for the existence of both ALA and

SIR OTONDE MICHAEL AWITI-DELEGATE

LCRDC codes, the Anglo-American Cataloguing Rules of 1967 would have taken much longer to appear.

4.2.3 Cataloguing codes after 1950

4.2.3.1 Anglo-American Cataloguing Rules (AACR) 1967

After the publication of the ALA code in 1949, the American Library Association itself invited SEYMOUR LUBETZKY in 1951 to prepare a general analysis of the code. In particular, Lubetzky was to look into the rules for corporate authors and a discussion of

the objectives and the principles which should underlie the revision of the rules. At this time, Lubetzky was consultant on bibliography and cataloguing policy to the Library of Congress. His report was completed and published in 1953 and it was in three parts as follows:

Part I: This part considered the necessity or otherwise of each rule in the 1949 code. The main question relating to each rule was: "Is this rule necessary?" Lubetzky concluded in this part that many of the rules were not properly related to each other mainly due to poor wording and irrelevant definitions and destinations.

Part II. This addressed the question of corporate authorship complex. Lubetzky, finally favoured the idea of using distinctive name.

Part III. This addressed the direct entry principle leaving collocation to references. Collocative cataloguing principle means entering books written by one author using several pseudonyms under his real name. Direct cataloguing principle

SIR OTONDE MICHAEL AWITI-DELEGATE

means entering each book under the name used for each individual title.

At the same time, the ALA had reconstituted its Catalogue Code Revision Committee in 1951. This committee published its "Statement of objectives and principles for catalogue code revision" in 1956. Arising from the committee's work, a revised draft code was produced in 1960.

In 1961, an international conference on cataloguing principles was held in Paris. This conference produced what came to be known as the Paris Principles. These principles were endorsed by the Revision Committees of the ALA and L.A. which had started working closely together since 1960. By 1967, the new Anglo-American Cataloguing Rules (AACR) was published. The code was published in two versions, namely: the British text and the North American text.

The 1967 code was designed for large research libraries but can still be used by other types of libraries.

The code covers rules for choice and style of author and title headings as well as descriptive cataloguing.

In addition to monographs, other special materials such as maps, films, music etc have been given separate treatment.

The principle of main entry as distinguished from added entries is recognized although that of multiple entries through the use of unit entry is also accepted. Lubetzky's preference of a direct catalogue based on information found on the document and principally the title page is much reflected in this code.

Despite the foregoing, collocation has been considered an important objective of the code and indeed, it is a basic principle of the code that as far as possible, works by the same author should be collocated. In this connection, see Rule 42 which allows use of pseudonyms - - (direct entry). This same rule states that only one name should be used in catalogue entries, thus collocating an author's works.

Specific Comments on the Code

The code is in three parts, and part I covers chapters 1-5.

Chapter 1 Section I covers rules for entry and headings and these are rules 1-6.

SIR OTONDE MICHAEL AWITI-DELEGATE

These specifically cover:-

- ✓ Personal and corporate authorship
- ✓ Anonymous works
- ✓ Shared authorship
- ✓ Works produced under editorial directions
- ✓ Collections
- ✓ Serials

Section II

This covers rules for mixed authorship and related works and these rules are 7-19. They are somehow an extension of rules for shared authorship but more complicated in that they force a choice between alternatives e.g. adapter and original author, artist and author of text, corporate and personal author etc.

Section III

Rules 20-33. These rules concern themselves with problems which arise from legal and religious publications ending with rule 33 for added entries.

Chapter 2 Section I Rules 34-39 are left out.

Section II – Rules 40-58 are concerned with problems of names of persons, e.g. 41 choice among different names; style of heading (46-53) e.g. compound surnames, prefixed names, titles of nobility.

Rules 54-58 are meant to assist in dealing with foreign names.

Chapter 3: This covers headings for corporate bodies and these are rules 60-98. Chapter 4: Covers rules for uniform titles – rules 100-119.

Chapter 5: Covers rules relating to references and these are rules 120-126.

Part II is headed **DESCRIPTION** covering chapters 6-9 rules 130-191 and this deals with descriptive cataloguing.

Part III covers Chapters 10-15 and these are on Non-book materials and these are

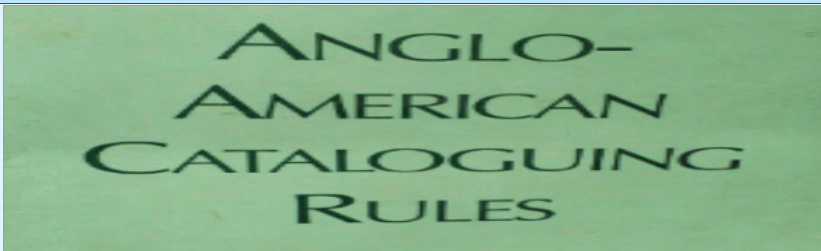

SIR OTONDE MICHAEL AWITI-DELEGATE

rules 200-272.

The code then ends with appendices covering glossaries; capitalization; abbreviations; numerals; punctuations; and diacritics.

The code also gives a statement of those rules whose American Text differs from the British. On the whole, the code met with general approval. However, it has been criticized for lack of adequate definition of the nature of authorship and responsibility in both personal and corporate authorship. Also, it has been blamed for its unwillingness to accept the consequences of its decision on principles e.g. in the American rules, it allows the entry of certain classes of organizations under place name rather than distinctive name.

4.2.3.2 Anglo American Cataloguing Rules 2nd Edition (AACR2) 1978

After the publication of the Anglo-American Cataloguing Rules in 1967, (nowadays referred to as AACR 1), a number of changes were found desirable during the succeeding years. One of these was in connection with corporate bodies in which entry under place was dropped altogether in 1974.

In addition to this change, about 40 other rules were changed. One other very important factor was the emergence of the programme of International Standard Bibliographic Description (ISBD) from the International Meeting of Cataloguing Experts held in Copenhagen, Denmark in 1969 under the aegis of the International Federation of Library Associations (IFLA). The primary objective of ISBD is to provide a standard for preparing the descriptive portion of bibliographic entries including catalogue entries prepared by national bibliographic and cataloguing agencies of all countries.

The first of these L.S.B.D. standards was officially adopted in 1971 by IFLA's Committee on Cataloguing at its meeting in Liverpool – England.

ISBD standardizes the elements to be included in bibliographic description and also assigns an order of these elements. It further specifies a system of symbols to be used in punctuating these elements.

SIR OTONDE MICHAEL AWITI-DELEGATE

By providing for standardized cataloguing of material of all kinds, ISBD facilitates the international exchange of bibliographic information.

The changes referred to above in connection with the 1967 AACR and the development of ISBD prompted a meeting of representatives of the national library associations and the national libraries of Canada, Great Britain and the United States of America in 1974, to plan the publication of The Anglo-American Cataloguing Rules, 2nd ed. (AACR 2). The objectives of the publication of the AACR2 as established during the 1974 meeting were:

- i. To reconcile in a single text the 1967 British and North American texts.
- ii. To incorporate in a single text all amendments and changes hitherto agreed upon and implemented under previous mechanisms.
- iii. To consider for inclusion in the AACR all proposals for amendments then under discussion between the ALA, the L.A., the L.C. and the Canadian Library Association.
- iv. To consider for inclusion in the AACR any new proposals put forward by the above bodies plus the British Library, and any proposals from national committees of other countries in which the AACR was in use.
- v. To provide for international interest in the AACR by facilitating its use in countries other than the U.S., Canada and the U.K.

During this meeting, a Joint Steering Committee for the Revision of AACR, in short JSCAACR, was established, with 1 voting and 1 non-voting member from each of the 5 author organizations namely:

The American Library Association The British Library

The Canadian Committee on Cataloguing The Library Association

The Library of Congress

The establishment of this steering committee culminated with the publication in 1978 of the Anglo-American Cataloguing Rules, 2nd Edition (AACR2).

General Comments on the Code

SIR OTONDE MICHAEL AWITI-DELEGATE

Though substantially different in presentation, the AACR2 claims to be only a continuation of the AACR1, having the same principles and objectives.

However, included in the AACR 2 are some of the newer materials that cataloguers have increasingly to deal with. Also, AACR2 has introduced some changes and new directions that will lead to differences in the bibliographic record and in the types and forms of heading under which it is displayed. Examples of these are to be found in the description, corporate author headings, uniform titles and fullness of names.

has been taken seriously in the AACR 2 and although it is not listed as one of the revision objectives, it was so considered by the JSCAACR in the declaration of the terms of reference.

In the AACR2, the spellings adopted are those of Webster's New International Dictionary, and where Webster gives an alternative English spelling, the British spelling has been adopted. Examples are "centre" and "catalogue".

There has also been an agreement on terminology and at times you find an American one adopted rather than a British one and vice versa, e.g. "Parenthesis" instead of "Brackets" and "fullstop" rather than "period".

The AACR2 provides for 3 levels of description thereby encouraging cataloguers to exercise judgement in interpreting the rules in the light of the needs of the users being served. Details increase at each level but the 3 levels meet the standards called for in the ISBD. The levels are to be found under the General Rules 1. OD1 – 1.OD3. The choice of the level of description by any library should be based on the purpose for which the catalogue is made.

Punctuations which can be said to be central to the use and success of ISBD are covered in rule 1.0c.

General Arrangement of the AACR 2

SIR OTONDE MICHAEL AWITI-DELEGATE

The AACR2 is principally in two parts which are further sub-divided into chapters.

Part I is on Descriptive Cataloguing and covers chapters 1-13.

Part II is on Headings, Uniform titles and References, and covers chapters 21-26.

The code then ends with appendices A-D and finally an index.

Chapter 1 covers in some detail the rules for descriptive cataloguing as well as the more general rules. The chapter is applicable to all types of materials such as print, sound recordings, etc.- - in all conditions e.g. microform.

The various types of material are covered in detail in chapters 2-12. But these chapters often refer back to chapter 1 for rules that are generally applicable. But again it should be noted that these chapters also give specific guidance for situations that are peculiar to a type of material under discussion. These chapters are as follows:-

- 2- Books, pamphlets and printed sheets
- 3- Cartographic material e.g. maps, plans etc.
- 4- Manuscripts – i.e. texts of all types including books, dissertations, letters, speeches etc.
- 5- Music – i.e. published
- 6- Sound recordings e.g. discs, piano rolls, sound recordings on film other than those intended to accompany visual images
- 7- Motion pictures and video recordings
- 8- Graphic materials – i.e. art originals and reproductions, charts, photographs, technical drawings etc. Also material meant for projecting or viewing e.g. filmstrips, slides etc.
- 9- Machine readable data files. A machine readable data file is a body of information coded by methods that require the use of a machine such as computer for processing. Examples are magnetic tapes, punched cards etc.
- 10- Three dimensional artefacts and realia. These include models and sculptures, naturally occurring objects such as microscope specimens or their representations

SIR OTONDE MICHAEL AWITI-DELEGATE

- 11- Microforms e.g. microfilms, microfiches and micropaques
- 12- Serials
- 13- Analysis – This covers a special problem in cataloguing – ie. the process of preparing a bibliographic record that describes a part or parts of a larger item.

Chapters 14-20 are left out purposely for later construction of rules for new types of material.

Part II is generally on headings, references and uniform titles, and has the following chapters:

- 21. Choice of access points. This chapter is on determining the headings for works being catalogued. Choice of entry rules deal with who or what is to be the entry heading.
- 22. Headings for persons. This chapter presents rules on the form the entry should take. The rules therefore deal with how an entry should be recorded.
- 23. Geographic names. These are names of places as used in headings, to be distinguished from corporate bodies with the same names.
- 24. Headings for corporate bodies. Here, rules concern themselves with the form of name to be used in the case of a corporate body for items issued by the body.
- 25. Uniform titles. The rules here provide the means for bringing together all the catalogue entries for a work when various manifestations of it have appeared under various titles.
- 26. References. This chapter gives guidance on “see” and “see also” references in general and the circumstances under which they are to be made.

Appendices

The AACR 2 ends with several appendices as follows:

Appendix A – Capitalization

SIR OTONDE MICHAEL AWITI-DELEGATE

This gives guidance on all manner of capitalization in all the different areas of a catalogue entry. This appendix should be studied carefully since it is, like the section on punctuations, very central to the success of I.S.B.D.

Appendix B - Abbreviations

This appendix is in several sections and gives details of abbreviations to be used in different parts of a catalogue entry. Included in this section are abbreviations for use in headings, uniform titles, title and statement of responsibility area etc.

There are also sections covering general abbreviations in such languages as Greek and Hebrew, those to be used in citing bibliographic sources, abbreviations of names of certain countries as well as states of Australia, U.S.A. and the provinces of Canada. Finally, there are abbreviations of the names of the months of the year.

Appendix C – Numerals

This appendix concerns itself with the use of numerals in different parts of a catalogue entry. It is important to note that it covers Arabic and Roman numerals in addition to others.

Appendix D - Glossary

The last of appendices is the glossary of most of the technical bibliographic and cataloguing terms used in the AACR 2. It is worth noting that the terms are defined in the context of the AACR2 only.

Index

The index is the last section of the AACR 2. It is very comprehensive indeed and covers the main portion of the AACR 2 (rules) as well as the appendices. It is important to note that all the index entries refer to rule numbers rather than pages. But entries for items to be found in the appendices are denoted by the use of such abbreviations as “App. A” followed by a numeral to show exactly the part of the appendix in which the item is to be found, e.g.

SIR OTONDE MICHAEL AWITI-DELEGATE

Companies

Capitalization, App. A18E.

Conclusion

This code has grown in popularity and continues to be widely used in many English- speaking countries of the world. Due to its popularity, it has also been translated into the following languages: Arabic, Bahasa Malasia, Chinese, Danish, Finish, French, Italian, Japanese, Norwegian, Portuguese, Spanish, Swedish, Turkish, and Urdu.

AACR2. The 1988 Revisions

Realizing that cataloguing rules cannot be static and must be allowed to respond to changing needs, the five AACR 2 author organizations entered into a new agreement to establish a second Joint Steering Committee for the Revision of AACR (JSCAACR) for a two year term. This was immediately after the completion of the text for the AACR2 in 1977. This agreement has been renewed several times for varying periods. It also defined the committee's membership as one representative for each of the five author organizations and two editors.

Since 1981, the Australian Committee on Cataloguing has been invited to send a representative to the JSCAACR meetings. But in 1986, this committee was made a full participant in the JSCAACR. This is because Australian cataloguers had for some time been contributing to code revision and to the review of draft documents sent from overseas.

Terms of Reference

The terms of reference for the Joint Steering Committee as set down in the 1977 agreement are:

1. To advise the editor of the abridged edition of AACR 2 and to approve the text of the said abridged edition prior to its publication.
2. To assess the use and sale of AACR 2 and the abridged edition and to advise the users of AACR 2 and the abridged edition on implementation or adoption of the rules; to advise as required on the granting of

SIR OTONDE MICHAEL AWITI-DELEGATE

permissions to translate.

3. To keep under review the need for amendment and revision of the second edition

SIR OTONDE MICHAEL AWITI-DELEGATE

- and abridgement, in the light of representations from users of the texts;
and to prepare any necessary amendments and revisions for publication
by the copyright owners on an agreed schedule for the issue of
amendment revision bulletins.
4. To act as a forum for discussion of proposals on rule interpretation so as
to ensure consistent use of AACR2 and to promulgate agreed rule
interpretations.
 5. To define and propose appropriate activities associated with
AACR2 in accordance with the funding agreement made with the
Council on Library Resources.
 6. To maintain liaison with IFLA and the UBC Office, in order to facilitate the
interests of users of AACR2 in any programmes of international
standardization in the cataloguing field carried out by those bodies.

The Joint Steering Committee has devoted time to all but one of these tasks. It quickly became obvious that it would be both time-consuming and costly for the Committee to discuss the large number of rule interpretations published by national bibliographic agencies. Rule interpretations that contravened the basic tenets of AACR2 were discussed only after a formal complaint had been submitted by a national committee. The committee then used moral suasion to encourage amendment of the rule interpretation or, if the rule interpretation had merit, requested a proposal for rule revision.

Work associated with the first term of reference culminated in the publication in 1981 of *The Concise AACR 2* by Michael Gorman.

In accomplishing tasks 2 and 5, Committee members have cooperated with the publishers and professional organizations, singly and as a group, to assist in the implementation and promotion of AACR 2 by initiating, coordinating, and participating in many training programmes and other activities.

SIR OTONDE MICHAEL AWITI-DELEGATE

The joint Steering Committee has also maintained liaison with international groups such as committees of the International Federation of Library Associations and Institutions

SIR OTONDE MICHAEL AWITI-DELEGATE

(IFLA), and the International Serials Data System. Some Joint Steering Committee representatives have also been members of these committees. Frances Hinton, chair of the Joint Steering Committee from 1981 to 1983, played an active role on the IFLA ISBD Review Committee and was chairperson of the ISBD(M) Working Group.

However, most of the Joint Steering Committee's work has been devoted to refining the rules. In 1988, a revised version of the AACR 2 was published incorporating the decisions taken by the Joint Steering Committee in the past ten years. In addition, it corrects obvious errors, modifies wording for ease of understanding, changes rules that have proven inadequate, and adds rules and examples to deal with new cases. The 1988 revision is not a new edition; it has not changed basic concepts.

The use of the rules by many cataloguers in different libraries and in various countries and the acts of translation into other languages revealed ambiguous wording, omissions, and typographical errors. Errors and omissions have been corrected, some rules reworded or rearranged, other rules given appropriate references.

Technological change is reflected in rule revisions. For example, videodiscs are different in important ways from those available in 1978, and microcomputer files have become part of many library collections.

In order to keep cataloguers informed, three sets of rule revisions were published, in 1982, 1983 and 1985. These revisions are found in the revised second edition as well as the unpublished revisions authorized by the Joint Steering Committee since 1985.

4.3 Summary

In this lesson we learnt about different cataloguing codes. The various codes have been covered including their development and why they were developed and what contents they included. This has been done based on their period of

4.4 Assessment questions

1. The following are major cataloguing codes that have contributed to the contemporary cataloguing practice. Which one is not?
 - A. The British museum code
 - B. The Library of Congress rules for subject cataloguing
 - C. Anglo American cataloguing rules
 - D. The American Library Association code
2. Which of the following cataloguing codes is not correctly matched with the year it was developed?
 - A. A.A Joint code – 1908
 - B. Cutter Rules for a dictionary catalogue
 - C. Anglo American cataloguing rules 2nd edition (AACR2) – 1978
 - D. Anglo American cataloguing rules (AACR)- 1968
3. AACR2 code has grown in popularity and continues to be widely used in many English-speaking countries.
 - A. True
 - B. False

LESSON 5 PHYSICAL FORMS OF CATALOGUE

5.1 Introduction

In the preceding lesson, we discussed cataloguing codes and justification for their use in libraries. We also discussed contents expected of an ideal cataloguing code. Finally, we studied in some detail some of the more widely used codes in the making of catalogue entries for a library catalogue.

In the current lesson, we shall study physical forms of catalogue representing the materials and the manner in which the catalogues are made available to library users.

5.2 Learning outcomes

By the end of this lesson, you will be able to:-

- 5.2.1 Distinguish between different forms of catalogue
- 5.2.2 Describe the book and computer book catalogues
- 5.2.3 Outline the considerations in the choice of a catalogue format

5.2.1 Different Physical Forms of Catalogue

A library has been described as a growing organism. It therefore follows that the library catalogue will keep growing to reflect the growth of the library. The physical form of the library catalogue has accordingly undergone many changes and the process is not about to end.

The physical form of catalogue is also referred to as the outer form. The inner form, to be discussed later, is the manner in which the entries in a catalogue are arranged. Some of the commonly used forms of catalogue are:

The Book

catalogue The

Sheaf catalogue

The Card

catalogue

The Microform catalogue

Online computer catalogue

The Guard book catalogue

5.2.2 The Book and the Computer Book Catalogue

5.2.2.1 The Book Catalogue

This form of catalogue is variously known as printed catalogue, book form catalogue, and even page catalogue.

It was developed from the early days of printing itself. It was also the commonest form of catalogue at the turn of the 20th century in the USA and particularly in public libraries which still had closed – access systems. But because this form of catalogue was expensive to produce and it also quickly went out of date, it was gradually replaced by both the sheaf and card catalogues.

In a book catalogue, details of a library's holdings are printed in form of a book. A

SIR OTONDE MICHAEL AWITI-DELEGATE

single page of this catalogue therefore contains several entries.

To keep the catalogue up-to-date, there is a need to have supplements produced at regular intervals. These supplements take care of additions of new material in the library from the time the previous complete edition of the catalogue was printed.

Withdrawals are made through the cancellation of entries for the withdrawn items. However, this can only be effected on the catalogue held by the library. Good examples of the printed book catalogue are:

- i) The Library of Congress National Union Catalogue (NUC)
- ii) The British Museum General Catalogue of Printed Books.

Advantages of the Book Catalogue

There are several points in favour of the book catalogue and the following are the major ones:

1. Familiarity

Since the book catalogue has been in use from the early days of printing of books, it can be considered as a traditional type of catalogue and is therefore a familiar form. It resembles books and periodicals and therefore creates less psychological barrier to readers.

Easy to Handle

Since the book catalogue is printed and bound, its pages can be turned as those of a book and so it is easy, simple and convenient to handle and use. There are no long trays to pull out and to put back, and it can be used and studied while the patron is seated comfortably.

2. Economy

The book catalogue has the advantage of economy in the sense that it takes up a lot less floor space in comparison to the card catalogue. In the card catalogue for instance, big catalogue cabinets of average height must be provided to hold catalogue trays. The cabinets end up taking up a lot of floor space, which is expensive.

3. Portability

Since the book catalogue is like a book, it is easily carried about and can be consulted in any part of the library. Indeed, its use is not confined to the library only and can even be carried home for relaxed consultation. The quality of portability of the book catalogue is considered as one of the most important advantages of the printed catalogue.

4. Span of Vision

An important quality of the book catalogue is its capacity with respect to the span of vision. One can run one's eye quickly through a page which contains several entries. This avoids the boredom of turning entry by entry as is the case with the card catalogue. It therefore has the advantage of saving time.

5. Ease of production in multiple copies

This form of catalogue can be produced in multiple copies for use in various parts of the library. Library users can also have copies for consultation at home. Indeed, other libraries can have copies of the catalogue, which they can use as book selection tools. They can also use the catalogue to trace items to be borrowed on inter library terms.

Disadvantages of the Book Catalogue

The book catalogue has the following disadvantages or shortcomings.

1. The catalogue can only be said to be up-to-date on the day it is ready for printing -
- otherwise it is always out of date. This is because additions to stock are made on a daily basis.
2. To keep the catalogue up-to-date, there is a need to produce supplements at regular intervals. Alternatively, new editions of the catalogue would have to be produced regularly. These up-dating methods make the book catalogue rather expensive.

SIR OTONDE MICHAEL AWITI-DELEGATE

3. The book catalogue is inflexible and though supplements can be used to solve the problem of additions, they cannot amend the original catalogue. Withdrawals or corrections cannot be reflected in the catalogue except the one held by the library, which again can only be done by hand. But even then the results are untidy.
4. Several people wanting to consult the same volume of the book catalogue will definitely experience difficulties.

Next	Computer book catalogue

5.2.2.2 The Computer Book Catalogue

This catalogue is essentially a book catalogue but one produced by use of the computer, rather than by conventional printing. Being a book catalogue, it therefore has the same advantages and disadvantages of the printed book catalogue. But it has also its own peculiar advantages and disadvantages.

Advantages of the Computer Book Catalogue

1. Multiple copies can be produced in a variety of arrangements such as author, title, and even subject without any additional filing effort.
2. The inflexibility of the conventional printed catalogue is not to be found in the computer book catalogue in that, data can be added into or deleted from the computer without much delay. Therefore, the catalogue can be easily and regularly updated. However, this can also be costly.

Disadvantages of the Computer Book Catalogue

1. In computerized catalogues, there is a problem of dealing with the older stock. If old stock is to be covered by the computer book catalogue, there would have to be re-cataloguing and this is an expensive process. The tendency is to have several sequences – e.g. original card catalogues, and the current acquisitions computer list.

Next	Sheaf catalogue

5.2.3 Sheaf and Card Catalogue

5.2.3.1 The Sheaf Catalogue

SIR OTONDE MICHAEL AWITI-DELEGATE

A sheaf catalogue is a catalogue on paper slips each bearing a single entry. The slips are held together in specially-produced loose-leaf type of binders, usually fixed by posts passing through open holes in the slips and which are held in place by screws.

The use of this form of catalogue dates from the 3rd quarter of the 19th century (1851- 1875), possessing as it did certain distinct advantages over the then prevalent printed book catalogue.

The paper or sheaf slips are of several standard sizes but the commonest are 7x4 inches and 8x5 inches. A complete volume or binder may hold between 500 and 650 slips. The binders themselves are filed in pigeon holes forming a catalogue cabinet. Each file of these slips or sheafs is therefore a handy volume and can be consulted in conjunction with the shelves.

Advantages of the Sheaf Catalogue

1. As each slip carries a single entry, the catalogue is infinitely flexible. It easily allows both insertion and withdrawal of entries as necessary just as is the case with the card catalogue. The catalogue can therefore be updated with comparative ease.
2. Since this catalogue is like a book in format, it can be easily handled and carried about even to the shelves. Its use is not confined to one place only as is the case with the card and some other forms of catalogue. It has therefore the advantage of portability.
3. This form of catalogue is relatively cheap to produce. This is because slips of paper are relatively cheaper than cards. However, slips of paper are less durable than cards.
4. The sheaf catalogue takes up much less floor space than does the card catalogue, but more than the printed book catalogue. The reason why it takes up less floor space than the card catalogue is that the sheaf binders are shelved and are not free-standing furniture like card cabinets. Also, the shelves holding the sheaf binders usually extend lower and higher than

SIR OTONDE MICHAEL AWITI-DELEGATE

card cabinets and therefore hold binders bearing a lot more entries than would be held by a card catalogue occupying the same floor space.

5. The sheaf catalogue can easily be produced in multiple copies since even carbon paper can be used for this purpose. It can therefore be made more easily accessible to a lot more people than the card catalogue.
6. Because of the ease of its production in multiple copies, it can be, and has indeed been used for the compilation of union catalogues.
7. The sheaf catalogue is fairly convenient to use, but less so than the book catalogue since sequential scanning of separate individual entries is not possible.

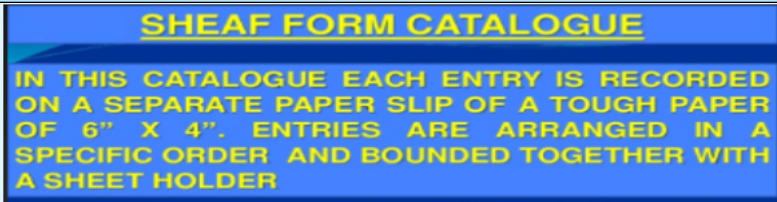

Disadvantages of the Sheaf Catalogue

1. Slips of paper are not reasonably durable and therefore call for replacement every so often. Therefore, the maintenance of this form of catalogue is fairly expensive.
2. Finding the correct place for the insertion or withdrawal of a slip is more cumbersome than in the card catalogue.
3. Insertion of new entries is rather time-consuming in that all the top entries will have to be removed first before the new one can be positioned in its appropriate place in the sheaf binder.
4. The sheaf catalogue is not as easily guided as the card catalogue. Therefore, users may take some time to locate entries they are looking for.
5. Like the card catalogue, it is wasteful to use only part of the slip for brief entries. Note also that only one side of the slip is used unlike the book catalogue where both sides of paper are used.

Next	The card catalogue

5.2.3.2 The Card Catalogue

This is the most commonly used form of catalogue today, and it is known to have been in use since the 1790s in France.

It consists of entries on cards 5x3 inches in size. Each card holds details for a single title. The cards themselves are filed in shallow drawers called catalogue trays. These trays are in turn housed in catalogue cabinets. Each standard catalogue tray holds approximately 1,000 cards.

The cards are held securely in their trays by a rod that passes right through circular holes at the bottom of the cards. This is principally to prevent the cards from being disarranged

in the event the tray is accidentally upset or dropped. It also prevents, or at least delays, unofficial removal of cards from the trays.

Advantages of the Card Catalogue

1. This form of catalogue is extremely flexible. This means that both additions and withdrawals can be carried out easily as need arises. It is therefore easily updated.
2. The catalogue is very easy to use and can be consulted by several persons at the same time unlike the book catalogue, which can be consulted by one person only at a time. This is especially so when it is allowed to spread sideways rather than upwards.
3. The catalogue is easy to produce through the use of mechanical means like the minigraph duplicating machine or even the computer.
4. It can also be easily guided. This is done through the use of colour codes to distinguish between different kinds of information. Other guiding is easily carried out through the use of cards with raised tabs.
5. The catalogue is more durable than the book and sheaf catalogues. This is so since cards are made of tough, thick paper, and if one card gets spoilt,

SIR OTONDE MICHAEL AWITI-DELEGATE

it can easily be replaced by a new one.

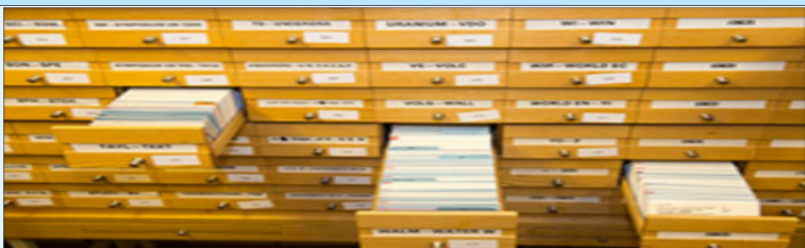

Disadvantages of the Card Catalogue

1. It is rather bulky and has the disadvantage of taking up too much floor space. This is especially so when it is allowed to spread sideways rather than upwards.
2. Going through individual cards for single entries is a much slower process than running one's eye through a page of the book catalogue which contains many entries.
3. It is rather wasteful to use cards for very brief entries leaving a large portion unused. Note also that only one side of the card is generally used.
4. A number of persons wanting to use the same part of the catalogue may experience some difficulties. This is more so when the catalogue is allowed to develop upwards rather than sideways.
5. A reader cannot consult any part of the catalogue away from the catalogue area unlike both the book and sheaf catalogues which can be consulted even at home. The catalogue has therefore the disadvantage of lacking portability.
6. The card catalogue is almost never available in multiple copies even within the home library.
7. It can be laborious to produce cards by individual typing if the number per book is insufficient to justify mechanical means of reproduction.

5.3 Summary

This lesson has covered earlier physical forms of catalogues including the book, computer book, card and sheaf catalogues. The lesson has highlighted various advantages and disadvantages of each of the forms of catalogues as well as comparing them in some cases.

5.4 Assessment questions

1. A physical form of a catalogue refer to the manner in which entries In a catalogue are arranged.
 - A. True
 - B. False
2. The following are the commonly used forms of catalogue. Which one is not?
 - A. Card catalogue
 - B. Microform catalogue
 - C. OPAC
 - D. E-resource catalogue
3. Which of the following is not a disadvantage of a book catalogue?
 - A. It is not flexible
 - B. It is difficult for several people to use at the same time.
 - C. It occupies a lot of space in the library
 - D. It is always out of data after printing

LESSON 6 COMPUTER BASED PHYSICAL FORMS OF CATALOGUES

6.1 Introduction

In the preceding lesson, we discussed older forms of catalogues such as the book, card and sheaf catalogues. In the current lesson, we shall study physical forms of catalogue representing the materials and these are mostly forms that are used with the aid of computers. Eventually we will look at the criteria for choosing a physical form of catalogue

6.2 Learning outcomes

By the end of this lesson, you will be able to:-

- 6.2.1 Explain microform and CD ROM catalogues
- 6.2.2 Describe the computer catalogue that is OPAC
- 6.2.3 Outline the considerations in the choice of a catalogue format

6.2.1 The Microform and CD ROM Catalogue

Microform Catalogue

The microform catalogue is in two formats namely: microfilm and microfiche.

A microfilm catalogue is one on a roll film bearing a number of micro-images. A microfiche catalogue on the other hand is a catalogue on a sheet of film also bearing a number of micro-images.

Microform catalogues have become popular with the development of what is known as Computer Output Microform (COM). The more common of the two is the microfiche catalogue.

Microfiche Catalogue

This catalogue has at the top of each fiche eye-readable labels that indicate the contents of the fiche sequentially, either by use of alphabets or numerals as appropriate. To read the rest of the information on the fiche catalogue, one needs a microfiche reader. A sheet of fiche can hold entries equivalent to those that can be held by a printed book catalogue of approximately 96 pages.

Advantages of the Fiche Catalogue

1. The fiche catalogue is quite compact and does not take up a lot of floor space. It has therefore the advantage of economy since floor space can be quite expensive.
2. It can be moved about for consultation and does not have to be in one place only. It has therefore the advantage of portability although this is greatly reduced by the requirement of a fiche reader wherever the catalogue is moved to.
3. The fiche catalogue is cheap to produce in comparison with the printed book catalogue.
4. It is also easy to keep up-to-date though this is only possible through the

SIR OTONDE MICHAEL AWITI-DELEGATE

regular issuing of communications or new editions, or even supplements.

5. The fiche catalogue is easy to produce in multiple copies. It can therefore be made available to a lot more people than the card catalogue.

Disadvantages of the Fiche Catalogue

1. The fiche catalogue calls for the use of a computer for its production. Without a computer therefore, it cannot be produced. For this reason, it is rather expensive to produce.
2. It is impossible to use without the help of a microfiche reader. This is another aspect that makes this form of catalogue expensive.
3. It is not capable of being used by more than one person at the same time. This fact therefore contributes to difficulties in its use.
4. The fiche catalogue is inflexible in that once it is printed; it cannot admit additions or withdrawals except through regular issuing of supplements or new editions of the catalogue. This method therefore makes it rather expensive once again.

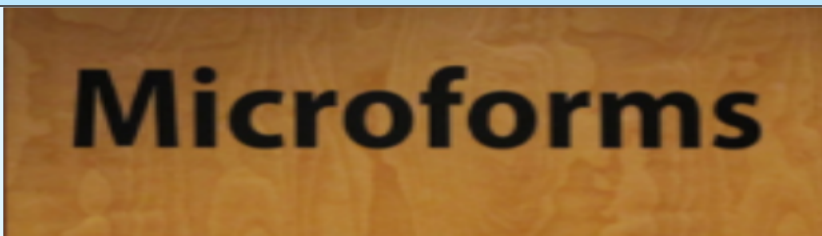

CD-ROM Catalogue

There is another form of catalogue also referred to as an on-line catalogue. This is the CD-ROM (Compact disk - - read only memory) catalogue. For this form of catalogue, a catalogue data base is periodically copied on to computer disks. These disks can be accessed through stand-alone micro-computers.

Next	Online computer catalogue

6.2.2: On-line Computer Catalogue (OPAC)

We have already discussed the computer book catalogue. The computer can also be used for the production of other forms of catalogue such as the card catalogue. But in addition to all these, the computer can hold catalogue details which can be

SIR OTONDE MICHAEL AWITI-DELEGATE

accessed directly by

library users. When library users can retrieve catalogue records directly from a computer database, the library is said to have an on-line catalogue.

The usual mode of display in an on-line catalogue is through a computer terminal. In this mode, individual cataloguing records are retrieved by means of access points or search keys and are displayed instantly on a monitor or screen. Many of the terminals are accompanied by printers, which may be used to print out desired items.

The records that are the base for an online catalogue can be stored in a mainframe or minicomputer to which public access terminals are connected. In either case, it can be said that library users are literally “on line” to the database.

Machine-readable cataloguing (MARC) records form the basic units of an on-line catalogue. For a catalogue record to be machine readable, it must be input to the computer. Also, its various elements such as author, title, subject, publisher etc. must be flagged or labelled in such a manner that, they can be stored, manipulated, and eventually retrieved in all the ways that are appropriate for technical and reference services in libraries.

Advantages of the On-line Catalogue

Among the many advantages of an on-line catalogue are:

1. It is easy to construct once the cataloguers have acquired the necessary skills.
2. The catalogue is more easily up-dated than manual formats. This is because data can be inserted or withdrawn as appropriate without affecting other data.
3. An on-line catalogue transforms the whole concept of location as its physical location is less obvious than that of other formats. Within the library itself, terminals may be dispersed throughout the various floors,

SIR OTONDE MICHAEL AWITI-DELEGATE

and the “location” of the catalogue depends on the connectivity of the telecommunications system than on the availability of physical space.

4. The traditional classified and dictionary arrangements are redundant in the context of an on-line catalogue. The filing rules problems for both librarians and users are greatly lessened in this form of catalogue.
5. Library users have the advantage of instant feedback during retrieval. There is also the advantage of faster searching in that terms or key words can be combined to define the search more precisely.
6. In this form of catalogue, users have more access points than any manual catalogue can offer.
7. The catalogue offers users remote access in that the users do not have to be physically present in the library to search in the catalogue.
8. It is easy and quick to access after a library user has acquired basic instructions on its use.
9. Many users are able to access the catalogue simultaneously through different computer terminals.
10. There is a greater user satisfaction with the on-line catalogue than with other formats.
11. A library using an on-line catalogue can access other external online catalogues with the necessary communication facilities.
12. An on-line catalogue is not subject to physical wear and tear as are other formats like the card, book and sheaf catalogues.
13. An online catalogue can be integrated with other library operations including acquisitions and circulation. With an integrated system, the user is able to ascertain whether a particular item is currently available for browsing or borrowing. It is also possible in some integrated systems to find out whether a certain item is on order.

Disadvantages of the On-line Catalogue

Some of the disadvantages of the on-line catalogue are:

1. It is expensive to install as a powerful host computer and terminals for

SIR OTONDE MICHAEL AWITI-DELEGATE

- users are required. There is also a great deal of peripheral hardware.
2. Cataloguers, and to a limited degree, catalogue users need training on computer skills.
 3. The computer is prone to breakdowns just like any other machine.
 4. There is also the problem of power supply such as outages or surges.
 5. Also, computers have to be switched off while maintenance and regular tasks like back ups are undertaken. This particular time, library users are inconvenienced unless there is a manual back up.
 6. If the catalogue serves many multi-site libraries, and as the library's stock increases, this also increases the amount of entries included. This has the negative effect of lowering the speed of searching.
 7. The catalogue faces such computer risks as virus attack which can result in destruction of records.
 8. The catalogue is prone to human errors resulting from mistakes in data entry.
 9. The use of the computer has side effects on the health of the users.
 10. Telecommunication systems used by the computer tend to be unreliable.

Next	Considerations in the choice of a catalogue format

6.2.3: Considerations in the Choice of a Catalogue Format

These can also be considered as the qualities that a good catalogue format is expected to possess. They include:

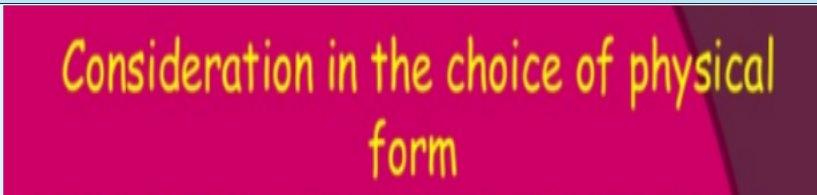

SIR OTONDE MICHAEL AWITI-DELEGATE

1. A good catalogue format should be flexible. This means that it should be capable of allowing both insertion of new entries and withdrawal of others appropriately and without difficulties. This point is of paramount importance in that, a catalogue is a record of the contents of a library and as such, it is essential to keep it up-to-date at all times to reflect these contents.
2. It should be easy to handle and consult. This means that it should present no difficulties at all to its users when being consulted.
3. It should be capable of easy guiding. Entries should be easy and quick to find in the catalogue through the help of labelled and other guides. Such a catalogue will save library users a lot of time.
4. A good catalogue should be economical to produce and maintain. Some catalogues are cheap to produce but rather expensive to maintain.
5. It should be capable of production in multiple copies. This fact makes the catalogue generally available to a lot of people and even other libraries.
6. A good catalogue should be compact so that it does not take up a lot of floor space. Space can be very expensive particularly in urban areas and therefore a catalogue format that occupies little floor space is to be preferred to one that takes up a lot of floor space. The printed book and fiche catalogues are perhaps the best in this respect while the card catalogue is the worst.
7. It should be easily portable so that its use is not confined to one place or spot only. This is because people may want to consult the catalogue while in different parts of the library or even outside.
8. It should be capable of use by several persons at the same time. The card catalogue possesses this quality although several persons intending to consult the same part of the catalogue may experience difficulties.

Unfortunately, no one catalogue format possesses all the above qualities.

LESSON 7 KINDS OF CATALOGUES

7.1 Introduction

In the previous lesson, we discussed different physical forms of catalogue including their strengths and weaknesses, ending with the qualities expected of a good catalogue format. The lesson was concerned with the outer form of catalogue. In the present lesson, we shall address different kinds of catalogue or what is generally referred to as the “inner form” of catalogue. The advantages and disadvantages of the most commonly used ones will also be discussed.

7.2 Learning outcomes

By the end of this lesson, you will be able to:

1. Distinguish between forms and kinds of catalogue
2. Describe the different kinds of catalogue in use today
3. Identify the major characteristics of different kinds of catalogue.
4. Compare and contrast the major kinds of catalogue in use today.

7.3 Different Kinds of Catalogue

The term “kind” as used in connection with catalogues refers to the manner in which entries in a catalogue are arranged. This is also referred to as the “inner form” which is different from the “outer form” which refers to the physical form of the material on which catalogue entries are made. In some cataloguing text

books, “kind” is interchangeably used with “type”. There are a number of different kinds of catalogue but the most important and most commonly used ones are the Dictionary catalogue and the classified catalogue.

7.3.1 Dictionary Catalogue

This kind of catalogue has entries under authors, editors, compilers, translators, titles, subjects, forms and series, which, together with the necessary references are all arranged in one alphabetical sequence A-Z like words in a dictionary. Hence the name “dictionary catalogue”. The dictionary catalogue can be considered as consisting of author catalogue, title catalogue, alphabetical subject catalogue and form catalogue, all consolidated in one alphabetical file.

It appeared on the library scene later than the classified catalogue and gained popular acceptance in the 19th Century particularly in the U.S.A. Indeed, the world-famous Charles Ammi Cutter’s “Rules for a dictionary catalogue” was first published in 1876 at the height of the dictionary catalogue’s popularity. The “Cutter rules” was the first publication to codify the principles of a dictionary catalogue construction and to offer rules for the making of every kind of entry.

In this catalogue, no indexes are necessary unlike in the classified catalogue since all kinds of entry are included in a single sequence. This therefore allows direct consultation under any search factor relating to the required publication since all the access points are in one file.

It is an easy catalogue to consult due to its simple alphabetical arrangement. But the success of the dictionary catalogue in displaying a subject approach to the publications catalogued depends largely on the care with which the subject headings are chosen. Therefore, the principle of specific entry is paramount in this respect. This, however, results in the separation of entries for related subjects or topics because their arrangement or filing in the catalogue depends on the initial letters of their names e.g. Arithmetic, Algebra, Geometry,

SIR OTONDE MICHAEL AWITI-DELEGATE

Trigonometry - - all branches of Mathematics.

To counteract this problem, the catalogue incorporates a system of subject references which direct attention to the subject relationships, and this acts to a certain extent as a substitute for the systematic arrangement of subjects provided by the classified catalogue.

The tendency these days is to split the dictionary catalogue into mainly author/title catalogue on the one hand and alphabetical subject and form catalogue on the other.

Advantages of the Dictionary Catalogue

1. The greatest advantage of the dictionary catalogue is its simple alphabetical sequence which is easy to understand by many catalogue users. Indeed, the alphabetical order is used in such common publications as encyclopaedias, dictionaries and even telephone and post office directories. It is therefore a familiar arrangement to many library patrons.
2. The alphabetical subject catalogue can easily supplement the classified shelf arrangement by bringing together different aspects of a subject which have been scattered by the classification scheme – e.g. works on “Gold mining” and works on the “Economics of gold mining” will be located under:

Gold mining

and Gold mining - - Economics

On the shelves, books on these two aspects of gold mining will be found in classes 622+ and 338+ respectively where the Dewey decimal classification scheme is in use.

3. The alphabetical arrangement is said to be more efficient in automated information retrieval than the classified order. Computer studies have shown that programming appears to be more effective in

SIR OTONDE MICHAEL AWITI-DELEGATE

alphabetical than in systematic searches.

4. Verbal subject headings are more easily understood by the average library user than classification symbols used in the classified catalogue. For instance, the term Electromagnetic interaction will be understood by a lot more people than the notation 539.7546 of the Dewey decimal classification or QC 794.8.E4 of the Library of Congress classification.

Disadvantages of the Dictionary Catalogue

1. Subject entries are often fragmented due to their alphabetical accident. This is, however, greatly minimized through the use of inversions and subdivisions, e.g.
 - Chemistry,
 - Analytical
 - Chemistry,
 - Inorganic Chemistry,
 - Organic
 - Chemistry, Physical and
 - theoretical Chemistry - -
 - Experiments Chemistry - -
 - Laboratory manuals Chemistry -
 - Societies.
2. Filing problems are a common feature of the dictionary catalogue. The interfiling of personal author and corporate author names, titles, subjects, cross references, compound and prepositional phrase headings etc. often complicates the filing and this does not make the understanding of the catalogue any easier. Indeed, this is the major reason why the catalogue is nowadays generally split into two sequences, namely: Author/Title and Alphabetical Subject.

SIR OTONDE MICHAEL AWITI-DELEGATE

E-tivity 7.3.1: Dictionary catalogue

Numbering, pacing and sequencing	7.3.1

Schedule and time	This task should take two hours
Next	The classified catalogue

7.3.2 The Classified Catalogue

A classified catalogue is any catalogue whose main entries are arranged according to the symbols of the classification scheme in use in a particular library. And because the classification symbols are not easily understood by most library users, the classified catalogue is only rendered useful through the use of two indexes, namely: the author index and the alphabetical subject index. The classified catalogue is therefore essentially composed of 3 files, i.e. the classified file, the author index and the alphabetical subject index.

The classified file can be said to be the main catalogue while the two indexes act as its supplements. They allow access or approach to the library collection through the factors of subject and authors' names.

The main purpose of the classified catalogue is to systematically collocate documents on related subjects and this is done through the classified file itself.

The Author Index

The author index normally contains entries under authors, subsidiary authors, editors, translators, titles and series. The index entries are usually very brief but sufficiently full to identify the document from all the others in the library. These entries contain such information as:

The author of the
book

The title of the
book

Edition of the book, if not the

SIR OTONDE MICHAEL AWITI-DELEGATE

first
Date of
publication
Number of volumes, if more than
one
Call number – i.e. class number and book
number.

If further information on the book is required, this should be sought from the
classified file which contains the fullest details.

However, where unit cataloguing is practised, the author index entries are
obviously as full as the classified entries.

Example of entry in an author
index

Bakewell, K G. B.
25.3 A manual of cataloguing
BAK practice.- - 1972.

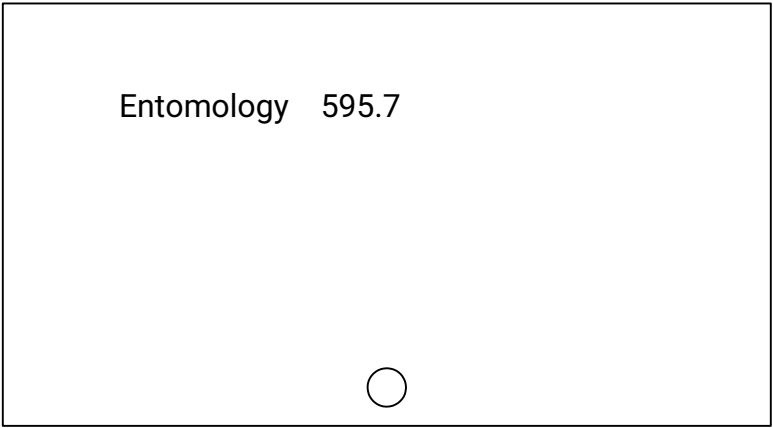

Alphabetical Subject Index

The subject index entries simply consist of the names of subjects with
their class numbers attached, e.g:

Education 370

107
○

SIR OTONDE MICHAEL AWITI-DELEGATE

SIR OTONDE MICHAEL AWITI-DELEGATE

Insects	595.7
	○

Synonyms are indexed twice like in the above example of entomology and insects. This means that “see” references are not usually used.

Construction of the Subject Index

The alphabetical subject index can be constructed through one of the following methods:

1. Use of the index to the classification scheme in use in a particular library, i.e. picking topics as represented in the index as the cataloguing and classification processes are carried out.

Disadvantages of this method

- (i) Not all the subjects requiring an entry in the index are to be found in the classification index.
 - (ii) The terminology used in the classification index may be different from that in general use, e.g. most general classification schemes are American and use American terminology.
 - (iii) The classification's index may change with different editions.
2. The Use of class entry terms from the classification schedules with alphabetical subdivisions where necessary e.g.
Photography 770

SIR OTONDE MICHAEL AWITI-DELEGATE

Photography	-	-	Equipment
771			
Photography	-	-	Negatives
771.43			
Photography - - Positives			771.44
etc.			

The listing continues until all divisions of photography represented in stock have been indexed. The disadvantage of this method is that it does not cater directly for specific terms, as can be observed from the above entries.

3. The use of a conventional List of Subject Headings such as Sears or the Library of

Congress Subject
headings.

But when such lists are used, the "See References" should be converted into direct index entries, e.g.

Birds
598.2

Ornithology
598.2

Floriculture
635.9

Flower gardening
635.9

Entomology
595.7

Insects
595.7

Unfortunately, lists of subject headings are indifferent to classification schemes and for this reason, there is a likelihood of difficulties arising in trying to match the ready – made terms from subject headings to class numbers of whatever classification scheme used.

4. Chain Indexing Procedure

SIR OTONDE MICHAEL AWITI-DELEGATE

This is the most reliable method of constructing a subject index to the classified catalogue. It is also recognized as being the quickest and most economic. It was first introduced by Ranganathan.

The chain indexing system is based on the analysis of the classification symbol of each subject. The symbol is analysed as a series of classes subordinated successively from the main class to the specific subject in form of a chain. For instance, a book on English

SIR OTONDE MICHAEL AWITI-DELEGATE

drama classified at 822 according to the Dewey decimal classification would be analysed

as:

Literature	800
English	820
Drama	822

Each member of the chain of classes thus produced provides an index entry which can be qualified by one or more terms if necessary to indicate the precise aspect dealt with, beginning with the last step of division e.g.

Drama: English	822
English: Literature	820
Literature	800

A book on gardening and horticulture with class number 635 would be analysed as under:

600	Technology
630	Agriculture. Farming
635	Gardening. Horticulture

Index entries:

Horticulture	635
Gardening	635
Agriculture	630
Farming	630
Technology	600

All the steps in the chain should be indexed even though the library may apparently not have any books on the more general subjects. This is because the reader who may consult these general subject terms may well be interested in the very specific aspects.

Advantages of the Classified Catalogue

1. The greatest virtue of this catalogue lies in the fact that it has a systematic arrangement. It therefore enables the inquirer to methodically survey the

SIR OTONDE MICHAEL AWITI-DELEGATE

library's resources within a subject class with comparative ease.

SIR OTONDE MICHAEL AWITI-DELEGATE

2. The catalogue offers extensive opportunities of browsing and in-depth searching.

This is because it is based on logical subject relationships rather than linguistic associations, as is the case with the dictionary catalogue.

3. The alphabetical subject index collocates distributed relatives, although it only gives subject terms, which may be ambiguous, and class numbers and not entries for documents.
4. Where the classified catalogue is in use, there is no need for a shelf list since the classified file is really a shelf list. There is therefore economy in the use of the classified catalogue.
5. It is convenient for compiling subject lists and issuing printed sectional catalogues.

Disadvantages of the Classified Catalogue

1. Many library users are not sufficiently conversant with classification schemes used in libraries and therefore they are unable to comprehend the sequence of entries which are according to classification notations.
2. The catalogue suffers from the same deficiencies of the classification scheme in use in a particular library. This is because no scheme is 100% logically systematized.

E-tivity 7.3.2: The Classified Catalogue

Numbering, pacing and sequencing	7.3.2
Title	The classified catalogue
Purpose	The purpose of this e-tivity is to enable you to be able to describe the classified catalogue and then contrast it with the dictionary catalogue

SIR OTONDE MICHAEL AWITI-DELEGATE

Brief summary of overall task	Watch this video and then describe the classified catalogue and contrast it with the dictionary catalogue.
Spark	WHAT IS THE DIFFERENCE BETWEEN DICTIONARY AND CLASSIFIED CATALOGUE?
Individual task	Using a table with 2 columns and 6 rows, explain how the classified catalogue differs from the dictionary catalogue
Interaction begins	1. Post your work on the discussion forum 7.3.2 2. View the examples posted by your colleague students. 3. Comment on 4 examples posted keeping netiquette in mind 4. Check out for comments given by other students on your posted work.
E-moderator interventions	❖ Ensure that learners are focused on the contents and context of discussion. ❖ Stimulate further learning and generation of new ideas. ❖ Provide feedback on the learning progress. ❖ Closing the e-tivity
Schedule and time	This task should take two hours
Next	The Alphabetico – Classified Catalogue

7.3.3 Other Kinds

As already mentioned at the beginning of this lesson, the two kinds of catalogues discussed above are the most commonly used ones in libraries throughout the world. The only other kind that requires a cursory mention is the alphabetico-classed catalogue due to its close relationship with both the dictionary and classified catalogues.

7.3.3.1 The Alphabetico – Classed Catalogue.

This is a catalogue of subject entries arranged alphabetically for the major divisions with their subordinate subdivisions alphabetically arranged under them. Here, entries are not made under specific subjects as is the case with the dictionary catalogue but under broad subjects within which the specific ones are cited. This is mainly done in an indirect order, e.g.

PHYSICS

Cosmic hypothesis

Electricity

Heat Light

Magnetism

Sound

It is a catalogue which lies in between the dictionary catalogue and classified catalogue. Although this kind of catalogue was supposed to secure the advantages of both the dictionary and classified kinds, in practice, the arrangement appears complex to the library user. Also, collocation of related subjects is largely destroyed by the use of alphabetical sub-arrangement. This hybrid kind of catalogue has however, not been fully experimented.

7.4 Summary

In this lesson we have learnt the dictionary and classified kinds of catalogue in use today and how they appear in many libraries and are used to categorize and locate the available books. The most widely used type is the dictionary organized like alphabetically like words in a dictionary are by subject, while the classified catalogue requires the author and title index to

7.5 Self-Assessment questions

1. The kind of a catalogue also known to as the inner form of a catalogue refer to the physical form of the material on which catalogue entries are made.
 - A. True
 - B. False
2. Which among the following is a commonly used kind of a catalogue?
 - A. Card Catalogue
 - B. Online computer catalogue
 - C. Dictionary catalogue
 - D. Sheaf catalogue
3. The classified catalogue is essentially composed of three (3) files. Which one is not one of them?
 - A. The chain Index
 - B. The alphabetical index
 - C. The Author Index
 - D. The classified file

REVISION QUESTIONS

1. American Library Association (ALA) code Revision committee was set up immediately after the publication of Lubetsky Report. Describe the statement of objectives published by that committee in relation to Lubetzky Report.
2. Compare and contrast AACR1 and AACR2 emphasizing the strengths and weaknesses of each.
3. Compare the Anglo American Cataloguing Rules 2nd ed. and Resource Description and Access. What are the similarities and differences?
4. Copy cataloguing involves keying in all the bibliographic details in the MARC fields, adding a barcode and editing and saving the record.
5. Define a library catalogue and explain its objectives.
6. Define cataloguing codes and explain why they are used in information organization.
7. Describe briefly the essential parts of a basic catalogue entry commenting on the importance of each.
8. Describe the dictionary catalogue citing both its strengths and weaknesses.
9. Describe the objectives underlying the revision of AACR1 and show the extent to which they were reflected in AACR2.
10. Differentiate between forms and kinds of catalogue
11. Discuss the card catalogue and give both the advantages and disadvantages it has over other forms of catalogue.
12. Discuss the criteria that should be used in selection of a catalogue format.

SIR OTONDE MICHAEL AWITI-DELEGATE

13. Discuss the dictionary catalogue with emphasis on strengths and weaknesses it has over the classified catalogue.
14. Discuss the Online Public Access Catalogue (OPAC) giving six advantages and six disadvantages it has over other forms of catalogue.
15. Distinguish between corporate authorship and personal authorship.
16. Distinguish between forms and kinds of catalogue.
17. Explain how a library catalogue achieves its objectives.
18. Explain how standardization and uniformity are achieved in cataloguing.
19. Explain in detail what you consider to be the objectives of a library catalogue.
20. Explain the objectives of revising the Anglo-American cataloguing rules of 1967 and state the extent to which they were achieved.
21. Explain the purposes of a library catalogue and show how they are achieved.
22. Explain the qualities that a good catalogue format is expected to possess.
23. Explain the use of references in cataloguing and the relationship between headings in the Library of Congress Subject Headings.
24. Explain why the online computer catalogue is becoming very popular in many Academic Libraries nowadays.
25. Give and explain the meaning of a library catalogue and distinguish it from other
26. Highlight the basic elements of a catalogue entry.
27. Highlight the instances when title main entries can be prepared by a cataloguer.
28. Describe three specific features of the following catalogue codes.
 - i) British Museum rules
 - ii) Cutters Rules for a dictionary catalogue

SIR OTONDE MICHAEL AWITI-DELEGATE

iii) Anglo American Rules: Author and Title Entries (AA 1908)

iv) Library of congress Rules for Descriptive cataloguing (L.C. 1949)

How is chain indexing used as a method of constructing the subject index for the classified catalogue?

29. How will RDA, the new cataloging rules, affect bibliographic records for compilations and collaborations?

30. Identify one element of a basic catalogue entry and explain its importance.....why is it included in a catalogue entry?

31. Identify the major characteristics of different kinds of catalogue.

32. Importance's of Machine Readable Cataloguing

33. In light of the ongoing technological developments what do you think will be the future of cataloguing? Give justifications

34. Name the 3 components to a library catalog

35. Outline the criteria of a good catalogue format.

36. Outline the objectives of a library catalogue.

37. The on-line catalogue has lately entered the library scene. What do you consider to be its prospects and challenges in libraries in Kenya today?

38. Trace the major developments that led to the need to revise the AACR 1 of 1967 and outline the revision objectives as laid down by the JSCAACR in 1974.

39. What are the main differences and similarities in cataloguing of print and cataloguing of online resources?

40. What are the strengths and weaknesses of the dictionary catalogue.

SIR OTONDE MICHAEL AWITI-DELEGATE

41. What do the 21st century information seekers need from catalogs?
42. What do you consider to be the contents of an ideal cataloguing code?
43. What is Machine Readable Cataloguing?
44. What is the contribution of cataloguing codes to information organization in libraries?
45. What is the importance of MARC to libraries?
46. What were the objectives for the revision of the AACR1 and to what extent were they achieved?
47. Why is the card catalogue still the commonest form in use in many libraries in many parts of the world today?
48. With reasons, explain whether what is referred to as the basic parts of a catalogue entry are still valid or relevant even to libraries using an automate
49. Define a dictionary catalogue and state why it is preferred to classified catalogue
50. Explain the author and subject indexes used with classified catalogues

GLOSSARY OF CATALOGING TERMS

AACR2R

Anglo-American Cataloging Rules 2nd edition, 1988 revision.

Access Point

Those portions of a bibliographic record under which a user can search for an item in that catalog. Within an automated system, virtually any portion of a library catalog record can conceivably be used as an access point, or search term.

Added Entry

An entry, additional to the main entry, by which an item is represented in a catalog. (e.g. name added entry, title added entry).

Analytics

Bibliographic records that describe part of parts of a larger item.

ANSI

American National Standards Institute; the overall organization for voluntary standards in the U.S. and the U.S. member of the International Organization for Standardization. The library related standards generally come from the National Information Standards Organization.

ASCII

American Standard Code for Information Interchange. Computers store characters as a combination of bits. ASCII assigns standard meanings to those combinations so that information can be interchanged. Authority Control Maintenance of established headings, both within an authority file and within bibliographic files including card catalogs. Basically consists of establishing one standard form of a name or word under which library patrons should search within a catalog. Also involves the creation

SIR OTONDE MICHAEL AWITI-DELEGATE

of cross-reference names or terms.

Authority File

A list of authorized headings, documentation, and cross references.

Authority Record

Includes the established form of a name or word that is used as an access point in a library catalog, as well as cross -references from other names or terms.

Bibliographic Control

The process of managing library materials by recording identifying data for each item and organizing it for retrieval in a desired manner (usually grouped by authors, titles, and subjects).

Bibliographic Utilities

Common term for OCLC, RLIN, and WLN, the three major shared technical processing systems.

Catalogue

A catalogue contains records, with detailed descriptions and location information, of the material in a library collection. In this Library the catalogue is available online and known as Library Search.

Citation

A brief description of a text (book, article, report, World Wide Web page, or other) that has been quoted, or used as an authority. A complete citation for a book typically includes author, year, title, and publication information such as place of publication, publisher or URL. A complete citation for a periodical or magazine article includes author and title of the article, title of the periodical, volume number, page numbers, and the dates or a retrieval statement like a URL or DOI.

SIR OTONDE MICHAEL AWITI-DELEGATE

Caption Title

A title given at the beginning of the first page of the text.

Cataloging Source

Source of cataloging information, represented in USMARC record by field 008, position 39, and field 040, which gives NUC codes for the cataloging agency, transcribing agency, and any agencies that modify the record. Chief Source of Information

The source of bibliographic data to be given preference as the source from which a bibliographic description is prepared (e.g. the title page is the chief source of information for the 245 field).

CIP

Cataloging in Publication, a program of the Library of Congress to make partial cataloging information available for items before they are published. conversion project, based on OCLC and managed by OCLC for most of its life, building a large database of serials records and, more recently, adding abstracting and indexing information to those records. database, and incorporating it into one's own catalog.

Copy Holdings

A copy holdings record is linked to each bibliographic record. In it is listed each copy owned, in process, or on order. Also in the copy holdings records is an item's location, call number, linkages to order and circulation records, date of cataloging, and type of cataloging.

Copy-Specific Information

Information that pertains only to a single copy of an item, as opposed to bibliographic data (normally applicable to all copies of an edition).

SIR OTONDE MICHAEL AWITI-DELEGATE

Delimiter

Within the MARC formats, delimiters are used to identify and differentiate between separate elements within a field. The delimiter sign is used with a MARC subfield code in front of each data element to identify subfields within MARC fields. Edition A1 copies produced from essentially the same type image and issued by the same entity.

Enumeration

Numbering, as in serial volume and issue numbering.

Fixed Field

Within the MARC formats, there are several fields which are a fixed number of characters in length. These fields run along the top of the bibliographic record.
