

SECTION A

1. Explain the following concepts:

(a) Inclusive Education (2 marks)

Inclusive education is a system where all children, regardless of their abilities or disabilities, learn together in the same classroom. It means creating an environment where every learner feels welcome and supported.

Example: A child using a wheelchair, a child who is deaf, and a child with learning difficulties all attend the same regular class with modifications made to help them succeed.

(b) Mainstreaming (2 marks)

Mainstreaming is placing students with disabilities into regular classrooms, but they may still receive separate specialized support or instruction at times.

Difference from Inclusion: In mainstreaming, the child must adapt to the system. In inclusion, the system adapts to the child.

Example: A child with a hearing impairment attends a regular class but leaves for 30 minutes daily for speech therapy.

2. Explain two principles of inclusive education (4 marks)

Principle 1: Equity and Equality All children deserve equal access to quality education. This means providing different types of support so everyone can learn, not giving everyone the same thing.

Example: Providing a ramp for a wheelchair user and a sign language interpreter for a deaf student.

Principle 2: Participation and Belonging Every child should be able to actively participate in classroom activities and feel they belong to the school community, not just physically present.

Example: A child with autism participates in group projects with modified tasks suited to their abilities.

3. Distinguish between segregation and integration (2 marks)

Segregation

- Children with disabilities are separated into special schools
- They learn completely apart from non-disabled peers

SIR OTONDE MICHAEL DELEGATE EDUCATION

- Example: A special school only for blind children

Integration

- Children with disabilities attend regular schools
- They may be in separate classes or mainstream classes
- Example: A child with cerebral palsy in a regular school but in a separate classroom

Key Difference: Segregation = complete separation | Integration = same building but may be separate classes | Inclusion = same classroom with full participation

4. Describe two causes of disabilities in young children (4 marks)

Cause 1: Genetic/Hereditary Factors

- Some disabilities are inherited from parents through genes
- Example: Color blindness, sickle cell disease, cerebral palsy

Cause 2: Environmental Factors

- Caused by accidents, infections, or poor nutrition during pregnancy or early childhood
 - Example: A child becoming deaf due to meningitis; brain damage from a fall; physical disability from polio
-

5. Identify two factors which can influence exclusion of children from education (2 marks)

Factor 1: Poverty Poor families may lack resources to send children to school (no money for fees, uniforms, or transport).

Factor 2: Cultural Beliefs Some communities believe disabled children shouldn't go to regular schools, or girls shouldn't be educated, keeping children out.

6. Describe two qualities a teacher should have to implement inclusive education (4 marks)

Quality 1: Patience and Empathy A teacher must be patient with children who learn differently and show empathy by understanding their struggles.

Example: Taking extra time to explain concepts to a slow learner without frustration.

Quality 2: Flexibility and Creativity A teacher must be able to adapt lessons and create different ways to teach the same concept to reach all learners.

SIR OTONDE MICHAEL DELEGATE EDUCATION.

Example: Teaching mathematics through games for visual learners, songs for auditory learners, and hands-on activities for kinesthetic learners.

SECTION B

7. (a) Discuss two categories of learners with disabilities and indicate two causes for each disability and two characteristics (12 marks)

Category 1: Visual Impairment

Causes:

- Genetic inheritance (parents pass defective genes)
- Accidents or infections that damage the eyes

Characteristics:

- Cannot see written text without assistance
- Rely on touch and hearing to learn

Example: A blind student uses Braille to read and uses a white cane to navigate.

Category 2: Hearing Impairment

Causes:

- Genetic factors (born deaf)
- Infections like meningitis or chronic ear infections

Characteristics:

- Cannot hear spoken instructions
- May use sign language to communicate

Example: A deaf student communicates through sign language and reads lips.

7. (b) Explain the modifications and adaptations needed for the categories in (a) above for them to adequately engage in participatory learning in an inclusive classroom (8 marks)

For Visual Impairment:

- Provide Braille materials and audio recordings of lessons
- Use large print textbooks

SIR OTONDE MICHAEL DELEGATE EDUCATION

- Ensure classroom is safe with clear pathways
- Use verbal descriptions during visual demonstrations
- Seat near the teacher for guidance

For Hearing Impairment:

- Provide a sign language interpreter in class
 - Use visual aids and written instructions
 - Ensure the student can see the teacher's face (for lip reading)
 - Use captioned videos
 - Provide note-takers or written summaries
-

8. Trace the historical development of inclusive education globally and in Kenya, from isolation to inclusion (20 marks)

Global Historical Development:

Stage 1: Isolation/Institutionalization (1800s-1950s)

- Children with disabilities were kept at home or in institutions
- No formal education provided
- Society viewed disabilities as shameful

Stage 2: Segregation (1950s-1970s)

- Special schools were created for children with disabilities
- Still separated from non-disabled peers
- Example: Schools specifically for the blind or deaf

Stage 3: Integration (1970s-1990s)

- Children with disabilities attended regular schools
- Often placed in separate classrooms
- Example: A regular school with a special unit for disabled children

Stage 4: Inclusion (1990s-Present)

- All children learn together in mainstream classrooms
- Support services provided within regular schools
- Salamanca Statement (1994) promoted inclusive education globally

Kenya's Historical Development:

Pre-1960s: Children with disabilities received no formal education

1960s-1980s: Special schools were established; children segregated

1980s-2000s: Introduction of integration policies; some disabled children in regular schools

2003 Onwards: Kenya adopted inclusive education policies through sessional papers and the Constitution (2010) which guarantees rights to education for all

Current (2010-Present): Kenya promotes inclusive education in all schools, though implementation challenges remain

9. As a competent teacher in an inclusive classroom describe four factors you would consider when creating an environment that caters for the needs of all learners (20 marks)

Factor 1: Physical Environment

- Remove physical barriers (ramps for wheelchairs, accessible toilets)
- Ensure proper lighting for students with visual impairments
- Arrange furniture to allow movement and accessibility
- Place safety equipment within reach

Example: Install a ramp at the school entrance so wheelchair users can enter independently.

Factor 2: Teaching Methods and Materials

- Use varied teaching approaches (visual, auditory, kinesthetic)
- Provide materials in different formats (Braille, large print, audio)
- Adapt the curriculum to different learning speeds
- Use inclusive resources that show diversity

Example: When teaching about community helpers, include people with disabilities in the pictures and stories.

Factor 3: Support Services

- Provide trained teaching assistants
- Arrange for interpreters (sign language, visual guides)

SIR OTONDE MICHAEL DELEGATE EDUCATION

- Offer counseling services
- Have therapy professionals available (speech, occupational)

Example: Have a sign language interpreter present during all lessons for deaf students.

Factor 4: Positive and Accepting Classroom Culture

- Create an environment where all differences are respected
- Encourage peer support and cooperation among students
- Celebrate diversity through inclusive celebrations and discussions
- Build students' self-esteem and sense of belonging

Example: Pair students with and without disabilities for group work so they learn from each other and develop friendships.

10. Analyze four collaborative efforts which can enhance learning in an inclusive classroom (20 marks)

Collaborative Effort 1: Teacher-Teacher Collaboration

- Regular teachers work with special education teachers to plan lessons together
- Share expertise and design inclusive lessons for all learners
- **Benefit:** Creates better strategies and ensures all students are considered during planning

Example: A math teacher and special education teacher design a lesson where calculations are taught through games, movement, and manipulatives for different learners.

Collaborative Effort 2: School-Parent Partnership

- Parents are involved in their child's learning and decisions
- Regular communication about child's progress
- Parents share information about their child's needs and strengths
- **Benefit:** Creates consistency between home and school; increases child's success

Example: A parent informs the teacher that their child with ADHD learns better in the morning, so the teacher schedules important lessons early.

Collaborative Effort 3: Inter-Professional Collaboration

SIR OTONDE MICHAEL DELEGATE EDUCATION.

- Teachers work with doctors, psychologists, therapists, and social workers
- Share information about the child's medical and social needs
- Coordinate support services

Benefit: Provides holistic support addressing all aspects of the child's development

Example: A speech therapist, teacher, and occupational therapist meet to coordinate therapy with classroom activities.

Collaborative Effort 4: Peer Support/Buddy System

- Students without disabilities are paired with students with disabilities
- They help each other learn, play, and develop friendships
- **Benefit:** Builds acceptance, reduces isolation, and enhances learning through peer teaching

Example: A student with good hearing is paired with a deaf student to help them during group discussions.

1. Explain the following terms (4 marks)

(a) Segregation

Segregation is the separation of children with disabilities from children without disabilities. They are placed in completely different schools or separate classrooms and do not interact or learn together.

Example: A deaf child attends a special deaf school while other children attend regular neighborhood schools.

(b) Inclusion

Inclusion is when all children, regardless of their abilities or disabilities, learn together in the same regular classroom with the necessary support and modifications provided.

Example: A child with Down syndrome sits in the same classroom as other children and participates in all activities with help from a teaching assistant.

2. Distinguish between inclusion and integration (2 marks)

Integration

- Children with disabilities attend a regular school
- They may be in separate classrooms or resource rooms

SIR OTONDE MICHAEL DELEGATE EDUCATION

- Limited interaction with non-disabled peers
- The child must adapt to existing systems

Example: A child with cerebral palsy attends a regular school but spends most time in a special unit; joins mainstream class only for assembly.

Inclusion

- All children learn in the same classroom together
- Full participation in all activities
- Support and adaptations are made by the system
- Everyone belongs and participates equally

Example: The same child with cerebral palsy sits in the regular classroom, participates in all lessons with modifications, and eats lunch with peers.

Key Difference: Integration = same building, possibly separate classes | Inclusion = same classroom, full participation

3. Mention 4 categories of children who would need inclusive education (4 marks)

Category 1: Children with Physical Disabilities

- Examples: Cerebral palsy, spinal cord injuries, limb amputations
- Need: Ramps, accessible toilets, mobility aids

Category 2: Children with Sensory Disabilities

- Examples: Blindness, deafness, visual or hearing impairments
- Need: Braille materials, sign language interpreters, audio descriptions

Category 3: Children with Intellectual Disabilities

- Examples: Down syndrome, autism, intellectual developmental disorder
- Need: Simplified curriculum, visual supports, patient instruction

Category 4: Children with Emotional and Behavioral Difficulties

- Examples: ADHD, emotional disturbances, behavioral problems
 - Need: Behavior management strategies, counseling, safe learning environment
-

4. State 4 principles of inclusive education (4 marks)

SIR OTONDE MICHAEL DELEGATE EDUCATION.

Principle 1: Right to Education Every child has the right to free, quality education regardless of their abilities or disabilities.

Principle 2: Equity and Equality All children deserve equal access and opportunity to learn, though they may need different types of support.

Example: Providing a ramp for a wheelchair user and large print books for a child with low vision—different support, equal opportunity.

Principle 3: Respect for Diversity All differences (abilities, disabilities, cultures, backgrounds) are valued and respected as normal human variation.

Principle 4: Participation and Belonging Every child should actively participate in classroom activities and feel they truly belong to the school community, not just physically present.

5. Identify 5 categories of children in need of care and protection (5 marks)

Category 1: Children with Disabilities

- Have physical, sensory, intellectual, or emotional disabilities
- Need protection from discrimination and barriers to learning

Category 2: Children from Orphanages/Without Parental Care

- Have lost parents or are abandoned
- Need love, security, and basic needs

Category 3: Children Affected by Child Labor

- Forced to work instead of attending school
- Exposed to exploitation and dangerous conditions

Category 4: Children from Minority Groups

- May face discrimination based on ethnicity, religion, or culture
- Vulnerable to exclusion from education and services

Category 5: Children from Economically Disadvantaged Families

- Live in poverty without access to basic needs (food, shelter, clothing)
 - Cannot afford school fees or learning materials
-

6. State 5 characteristics of children with intellectual disabilities (5 marks)

Characteristic 1: Delayed Cognitive Development

SIR OTONDE MICHAEL DELEGATE EDUCATION

- Learn more slowly than same-age peers
- Struggle with problem-solving and abstract thinking
- Need more time to understand concepts

Example: A 10-year-old with Down syndrome may have the learning ability of a 6-year-old.

Characteristic 2: Difficulties in Adaptive Functioning

- Struggle with self-care skills (eating, dressing, toilet training)
- Need help with daily living tasks

Characteristic 3: Poor Communication Skills

- Speech is unclear or limited
- Difficulty understanding complex language
- May communicate non-verbally

Characteristic 4: Social and Emotional Challenges

- Difficulty understanding social rules
- May have trouble making friends
- Limited emotional control

Example: A child may not understand why pushing is wrong in a game.

Characteristic 5: Low Academic Achievement

- Struggle with reading, writing, and mathematics
- Progress slowly in academic subjects
- May never reach grade-level standards

7. Describe 3 placement options for children with disabilities (6 marks)

Option 1: Special/Segregated Placement

- Child attends a school exclusively for children with disabilities
- Specialized staff and equipment available
- Separate from non-disabled peers

Advantages: Specialized resources, trained teachers, peer understanding **Disadvantages:** Isolation, limited exposure to non-disabled peers, stigma

Example: A school exclusively for blind children where all teaching materials are in Braille.

Option 2: Integrated/Resource Room Placement

- Child attends a regular school but spends part of the day in a special resource room
- Works with special education teacher in resource room
- Joins mainstream class for some subjects

Advantages: Some interaction with peers, specialized support available **Disadvantages:** Still separated for part of the day, may feel different

Example: A child with hearing impairment spends 2 hours daily in the resource room for speech therapy, then joins regular classes for math and science.

Option 3: Full Inclusion/Mainstream Placement

- Child attends regular classroom with all non-disabled peers
- Support services brought into the classroom
- All modifications made within the regular class

Advantages: Full participation, equality, better social interaction, helps change attitudes

Disadvantages: May need significant adaptations, requires trained teachers, teacher workload increases

Example: A child with cerebral palsy sits in the regular classroom with a teaching assistant who helps with mobility and learning tasks.

8. “Inclusive education dictates that all children belong to regular education.” Discuss (20 marks)

Introduction

Inclusive education is an educational approach that recognizes that all children, regardless of disability, gender, social, cultural, or economic background, have a right to learn together in regular schools. It emphasizes restructuring schools and teaching practices so that they respond to the diverse needs of all learners. The statement means that regular schools should accommodate every child and ensure meaningful participation and learning for all.

1. Inclusive education emphasizes that every child has a right to education in regular schools

Inclusive education is based on the principle that education is a fundamental human right. All children should access education within their local community schools rather than being

SIR OTONDE MICHAEL DELEGATE EDUCATION

excluded or placed in separate institutions.

Example: A child with physical disability attending a nearby public primary school instead of being sent to a distant special school.

2. It promotes equal access to education regardless of disability or background

Inclusive education ensures that barriers related to disability, poverty, gender, or ethnicity do not prevent children from accessing education. All learners are given equal opportunities to enroll, participate, and succeed in school.

Example: A learner from a marginalized community with learning difficulties being admitted and supported in a regular school.

3. Regular schools are expected to adapt teaching methods and environments

In inclusive education, schools change their curriculum, teaching strategies, and physical environment to meet learner needs. The learner is not expected to fit into a rigid system.

Example: Providing ramps, adjustable desks, and using visual aids or simplified instructions for learners with different needs.

4. Inclusion enhances social interaction and acceptance among learners

When children learn together, they interact daily, build friendships, and understand one another better. This promotes social development and a sense of belonging for all learners.

Example: Learners working in mixed-ability groups where children with and without disabilities collaborate on tasks.

5. Learners develop positive attitudes toward diversity

Inclusive settings help learners appreciate individual differences and respect diversity. This reduces fear, prejudice, and negative stereotypes.

Example: Learners becoming comfortable communicating with peers who use sign language or mobility aids.

6. Teachers use differentiated instruction to meet varied needs

Inclusive education requires teachers to use flexible teaching approaches that cater to different learning styles, abilities, and speeds. Lessons are planned to accommodate all learners.

Example: A teacher using oral explanations, visual charts, practical activities, and peer support in one lesson.

7. Support services such as therapists and special needs teachers are provided

Inclusive education involves collaboration with professionals who support learners with special needs. These services enhance learning and participation.

Example: A speech therapist supporting a learner with speech difficulties while the learner remains in a regular classroom.

8. International frameworks like the Salamanca Statement support inclusion

Global agreements emphasize inclusive education as the most effective way to educate learners with diverse needs. These frameworks guide national policies and practices.

Example: The Salamanca Statement (1994) encourages regular schools to accommodate all learners regardless of disability.

9. In Kenya, policies support inclusive education in public schools

Kenya has adopted inclusive education through national policies and curriculum reforms that emphasize equity and learner diversity. Public schools are encouraged to enroll and support learners with special needs.

Example: The Competency-Based Curriculum (CBC) promotes learner-centered and inclusive teaching practices.

10. Inclusion reduces stigma and discrimination in society

Educating children together from an early age promotes acceptance and respect, reducing negative attitudes toward persons with disabilities in the wider society.

Example: Learners who grow up in inclusive schools are more likely to treat people with disabilities with respect as adults.

Conclusion

Inclusive education affirms that all children belong in regular education and should learn together in supportive and flexible school environments. By promoting equal access, adapting school systems, encouraging social interaction, and reducing discrimination, inclusive education benefits both learners and society. When properly implemented with adequate support, inclusive education ensures quality education for all and fosters a more just and inclusive society.

9. Describe factors to consider while teaching a child with special needs in an inclusive classroom (20 marks)

SIR OTONDE MICHAEL DELEGATE EDUCATION

- **Learner's ability level:** Teaching should match the learner's strengths and limitations.
 - **Teaching methods:** Use varied, learner-centered strategies.
 - **Learning materials:** Adapt materials such as large print or visual aids.
 - **Classroom environment:** Ensure accessibility and safety.
 - **Assessment methods:** Use flexible and continuous assessment.
 - **Teacher attitude:** Maintain a positive and supportive attitude.
 - **Peer support:** Encourage cooperative learning.
 - **Support services:** Involve specialists and parents.
-

10. Discuss the role of international conventions towards inclusive education (20 marks)

1. Promote education as a basic human right

International conventions recognize education as a fundamental human right for every child. They emphasize that no child should be denied education due to disability, gender, or social background.

Example: The UN Convention on the Rights of the Child affirms every child's right to education.

2. Advocate for non-discrimination in education

These conventions prohibit discrimination in access to education. They require countries to ensure that learners are not excluded, segregated, or treated unfairly because of disability or other differences.

Example: Learners with disabilities must be admitted to regular schools on the same basis as others.

3. Encourage governments to adopt inclusive education policies

International conventions guide governments to develop national policies that support inclusive education. Countries are encouraged to reform education systems to accommodate diverse learner needs.

Example: Kenya's inclusive education policies align with international commitments.

4. Provide guidelines for supporting learners with disabilities

SIR OTONDE MICHAEL DELEGATE EDUCATION.

Conventions offer clear guidance on how schools should support learners with disabilities through reasonable accommodations, assistive devices, and support services.

Example: Providing sign language interpreters or Braille materials in regular schools.

5. Promote equal opportunities for all learners

International conventions emphasize fairness and equal opportunity so that all learners can participate fully and achieve their potential.

Example: Allowing extra time during examinations for learners with learning difficulties.

6. Influence national education laws and reforms

Many countries revise or enact education laws to comply with international conventions. These reforms help strengthen inclusive education systems.

Example: Laws requiring schools to admit learners with disabilities and provide necessary support.

7. Support teacher training in inclusive practices

Conventions emphasize the importance of trained teachers who can handle diverse classrooms. They encourage governments to invest in teacher training on inclusive education.

Example: Training teachers in differentiated instruction and special needs education.

8. Encourage international cooperation and funding

International conventions promote cooperation among countries, international organizations, and donors to support inclusive education initiatives. This includes funding, research, and sharing best practices.

Example: International agencies supporting inclusive education programs in developing countries.

Example: UN Convention on the Rights of Persons with Disabilities (CRPD)

The CRPD strongly advocates inclusive education by requiring states to ensure that persons with disabilities are not excluded from the general education system. It promotes accessibility, reasonable accommodation, and support services within regular schools.

11. Inclusive education is a participatory process. Discuss the collaboration efforts needed to make it a success (20 marks)

SIR OTONDE MICHAEL DELEGATE EDUCATION

- **Teachers:** Collaborate in lesson planning and learner support.
 - **Parents:** Share information and support learning at home.
 - **School administration:** Provide resources and supportive leadership.
 - **Learners:** Support one another through peer learning.
 - **Special needs professionals:** Offer assessment and intervention services.
 - **Community and NGOs:** Provide resources and advocacy.
 - **Government:** Formulate and implement inclusive education policies.
-

SECTION A

1. Explain the following terms (4 marks)

(a) Segregation (2 marks)

Separation of children with disabilities into special schools away from non-disabled children. They do not learn or interact together.

Example: A blind child attends a school only for blind children.

(b) Inclusion (2 marks)

All children, with and without disabilities, learn together in the same regular classroom with appropriate support provided.

Example: A child with cerebral palsy learns in a regular class with a teaching assistant.

2. Distinguish between exclusion and integration (2 marks)

Exclusion: Children with disabilities are not allowed to attend school at all; completely denied education.

Integration: Children with disabilities attend regular school but may be in separate classrooms; limited mixing with non-disabled peers.

Key difference: Exclusion = no school | Integration = same school, possibly separate classes
| Inclusion = same classroom, full participation

3. Mention 2 categories of children who would need inclusive education (4 marks)

Category 1: Children with Physical Disabilities Cerebral palsy, spinal injuries, limb amputations. Need ramps, accessible facilities.

SIR OTONDE MICHAEL DELEGATE EDUCATION.

Category 2: Children with Sensory Disabilities Blindness, deafness. Need Braille materials, sign language interpreters, audio aids.

4. State 4 principles of inclusive education (3 marks)

1. **Right to Education** - All children have the right to free quality education
 2. **Equity and Equality** - All children deserve equal access with different types of support
 3. **Respect for Diversity** - All differences are valued and respected
 4. **Participation and Belonging** - Every child actively participates and feels they belong
-

5. Identify 3 categories of children in need of care and protection (5 marks)

1. **Children with Disabilities** - Need protection from discrimination and barriers
 2. **Orphaned/Abandoned Children** - Lack parental care and security
 3. **Children from Economically Disadvantaged Families** - Live in poverty without basic needs
-

6. Highlight 5 characteristics of children with intellectual disabilities (5 marks)

1. **Delayed Cognitive Development** - Learn slower than peers; struggle with problem-solving
 2. **Poor Adaptive Functioning** - Difficulty with self-care skills (dressing, eating)
 3. **Communication Difficulties** - Speech unclear or limited
 4. **Social and Emotional Challenges** - Difficulty understanding social rules; limited emotional control
 5. **Low Academic Achievement** - Struggle with reading, writing, math; progress slowly
-

SECTION B: (40 marks)

7. "Inclusive education dictates that all children belong to regular education". Discuss (20 marks)

Point 1: Right to Education All children have the right to learn in community schools. Excluding disabled children violates their human rights.

Point 2: Overcoming Segregation Special schools isolate children, create stigma, and prevent friendships. Inclusion brings all children together.

SIR OTONDE MICHAEL DELEGATE EDUCATION

Point 3: Equal Value and Belonging Disabled children have equal worth and belong in regular schools like everyone else. Belonging means being part of the community.

Point 4: Support Can Be Provided in Regular Schools Interpreters, assistants, and adapted materials can be provided in regular classrooms without needing separate buildings.

Point 5: Benefits for All Children Non-disabled children learn acceptance; disabled children develop better social skills and confidence; everyone benefits from diversity.

Point 6: Challenges Requires trained teachers, adequate resources, accessible facilities, and positive community attitudes—but these can be achieved.

Conclusion: Inclusive education recognizes all children belong in regular schools with proper support, not in segregated settings.

8. Analyze five factors to consider while teaching a child with special needs in an inclusive classroom (20 marks)

Factor 1: Individual Needs and Abilities Understand the child's specific disability, learning style, strengths, and weaknesses. Create an Individualized Education Plan (IEP).

Factor 2: Differentiation of Curriculum Simplify concepts, use multiple teaching methods, vary task difficulty. Provide different activities for different learners.

Example: When teaching animals, teach some children 3 animals, others 10, and advanced learners about food chains.

Factor 3: Appropriate Teaching Materials Provide large print books, Braille, audio recordings, manipulatives, visual supports based on the child's needs.

Factor 4: Accessible Physical Environment Install ramps, accessible toilets, ensure good lighting, remove barriers, arrange furniture for accessibility, provide safe space.

Factor 5: Support Services Arrange teaching assistants, interpreters, therapists (speech, occupational), peer buddies to support the child.

9. Discuss five placement options for children with disabilities (20 marks)

Option 1: Special/Segregated Schools Child attends a school exclusively for disabled children. Specialized staff and equipment available. **Advantage:** Specialized resources | **Disadvantage:** Isolation from non-disabled peers

Option 2: Resource Room/Integrated Placement Child attends regular school but spends part of day in special resource room. **Advantage:** Some peer interaction | **Disadvantage:** Still separated part-time

SIR OTONDE MICHAEL DELEGATE EDUCATION.

Option 3: Full Inclusion/Mainstream Child in regular classroom all day with support services brought into the class. **Advantage:** Full participation, equality | **Disadvantage:** Requires trained teachers, resources

Option 4: Combination/Flexible Placement Child moves between regular classes and resource room depending on subject. **Advantage:** Flexibility | **Disadvantage:** Still separated for some subjects

Option 5: Home-Based Learning Child learns at home with support from teachers/therapists visiting. **Advantage:** Individualized | **Disadvantage:** Isolation, limited social interaction

10. Examine five educational intervention measures applicable to a learner with visual impairment in an inclusive setting (20 marks)

Intervention 1: Provision of Braille Materials Books, notes, and learning materials in Braille so the child can read independently.

Intervention 2: Use of Audio Resources Audio recordings of lessons, textbooks, and instructions; use of screen reader software.

Intervention 3: Orientation and Mobility Training Teach the child to navigate the school safely using a white cane; clear pathways in classroom.

Intervention 4: Assistive Technology Magnifying glasses for low vision, talking calculators, adaptive computer software, screen readers.

Intervention 5: Adapted Teaching Methods Use verbal descriptions during visual demonstrations, provide tactile learning materials, seat near teacher for guidance.

SECTION A

1. Explain the following terms (4 marks)

(a) Integration [2 Marks]

Children with disabilities attend regular schools but may be in separate classrooms or resource rooms. Limited interaction with non-disabled peers.

Example: A deaf child attends a regular school but spends most time in a special unit; joins mainstream class only for assembly.

(b) Inclusion [2 Marks]

All children learn together in the same regular classroom with support and adaptations. Full participation and belonging in the classroom.

SIR OTONDE MICHAEL DELEGATE EDUCATION

Example: A child with Down syndrome sits in the same class, participates in all activities with a teaching assistant.

2. Identify TWO benefits of inclusive education [2 Marks]

Benefit 1: Social Development Children with disabilities develop better social skills, friendships, and confidence by learning alongside peers.

Benefit 2: Non-Disabled Children Learn Acceptance Non-disabled children develop empathy, respect, and understand diversity through interaction with disabled peers.

3. Distinguish between accommodation and adoption in inclusive setting [4 Marks]

Accommodation Making changes to the environment or teaching method so a disabled child can access the existing curriculum.

Example: Providing a ramp so a wheelchair user can enter the classroom; using large print books for a visually impaired student.

Adoption Modifying/changing the curriculum content or learning objectives to suit the child's ability level.

Example: A child with intellectual disability learns 5 sight words instead of 20; does simpler math problems than classmates.

Difference: Accommodation = keep same curriculum, change access | Adoption = change the curriculum itself

4. Debate TWO possible solutions to school factors leading to exclusion in regular classrooms [2 Marks]

Solution 1: Teacher Training and Professional Development Train teachers in inclusive education strategies, disability awareness, and differentiated teaching to remove the barrier of teacher incompetence.

Solution 2: Provision of Resources and Support Allocate budget for teaching assistants, assistive technology, adapted materials, and accessible facilities to remove resource barriers.

5. Outline TWO reasons for children to desert and opt to live in the streets [2 Marks]

Reason 1: Extreme Poverty Families unable to afford basic needs (food, shelter, clothing, school fees) push children to streets to find survival means.

Reason 2: Abuse and Neglect at Home Children escape abusive, neglectful home environments seeking safety and freedom on the streets.

6. Describe THREE types of learning disabilities [6 Marks]

Type 1: Dyslexia Difficulty with reading and spelling despite normal intelligence. Words appear jumbled or reversed.

Example: A child reads "was" as "saw"; struggles to recognize similar words.

Type 2: Dyscalculia Difficulty with mathematics and number concepts. Struggles to understand quantity, number operations.

Example: A child cannot grasp addition or multiplication; confuses numbers; struggles with telling time.

Type 3: Dysgraphia Difficulty with writing and handwriting despite normal thinking ability. Poor fine motor control and spelling.

Example: A child's handwriting is illegible; struggles to organize thoughts on paper; makes spelling errors.

SECTION B: 40 MARKS

7. Analyze FOUR ways children in difficult circumstances can be restored to access education [20 Marks]

Way 1: Provision of Fee-Free/Subsidized Education Remove cost barriers by providing free school meals, uniforms, books, and transport to allow poor children to attend.

Implementation: Government subsidizes school fees; communities provide meals; local organizations donate uniforms.

Way 2: Flexible/Alternative Schooling Options Offer evening classes, part-time schooling, distance learning, or mobile schools so children can balance work/survival with education.

Implementation: Mobile schools visit street children; evening classes for working children; online learning for those far from schools.

Way 3: Psychosocial Support and Rehabilitation Provide counseling, therapy, and safe spaces to help children recover from trauma, abuse, and street life; rebuild confidence.

Implementation: School counselors; support groups; child-friendly spaces; mentoring programs connecting children with caring adults.

SIR OTONDE MICHAEL DELEGATE EDUCATION

Way 4: Community and Family Support Programs Strengthen families through economic support (cash transfers, income-generating activities) so children don't need to leave school to survive.

Implementation: Conditional cash transfer programs; vocational training for parents; community safety nets; family reunification services.

8. Assess FIVE teaching strategies in Inclusive Setting [20 Marks]

Strategy 1: Differentiated Instruction Provide different tasks at different levels to the same class based on learner abilities. Some do simpler tasks, others advanced.

Effectiveness: Allows all learners to progress at their own pace; keeps all engaged.

Strategy 2: Cooperative Learning/Group Work Mix ability levels in groups where students help each other. Disabled and non-disabled students work together.

Effectiveness: Peer teaching; builds relationships; all students contribute according to ability.

Strategy 3: Use of Visual Aids and Manipulatives Use pictures, charts, real objects to teach concrete concepts instead of just verbal explanation.

Effectiveness: Helps visual learners and those with language difficulties; makes abstract concepts concrete.

Strategy 4: Multisensory Teaching Engage multiple senses (sight, sound, touch, movement) when teaching to reach different learners.

Effectiveness: Reaches kinesthetic, auditory, visual learners; reinforces learning through multiple pathways.

Example: Teaching math through songs, movement games, and manipulative objects—not just numbers on board.

Strategy 5: Peer Tutoring and Buddy System Pair a strong learner with a struggling learner; non-disabled student supports disabled student.

Effectiveness: Provides personalized support; disabled child feels included; both children benefit.

SIR OTONDE MICHAEL DELEGATE EDUCATION

9. Discuss FIVE ways of accommodating learners with special needs in Inclusive settings [20 Marks]

Way 1: Physical Accessibility Remove physical barriers through ramps, accessible toilets, elevators, wide doorways, clear pathways, appropriate furniture arrangement.

Ensures: Children with mobility disabilities can move independently and access all areas.

Way 2: Adapted Teaching Materials Provide materials in different formats: large print, Braille, audio recordings, simplified texts, visual supports, manipulatives.

Ensures: All children can access information regardless of disability.

Way 3: Flexible Curriculum and Instruction Methods Simplify content while keeping core concepts; use different teaching approaches (visual, auditory, hands-on); allow extended time.

Ensures: Children with learning difficulties can access same curriculum at their level.

Way 4: Assistive Technology and Aids Provide hearing aids, wheelchairs, communication devices, computer software (text-to-speech, screen readers), magnifying glasses.

Ensures: Children with sensory/physical disabilities can fully participate.

Way 5: Use of Support Personnel Provide teaching assistants, sign language interpreters, note-takers, and therapists (speech, occupational) within the classroom.

Ensures: Children receive individualized support to succeed in regular classrooms.

10. Discuss FIVE barriers to inclusive education in Kenya [20 Marks]

Barrier 1: Negative Attitudes and Stigma Teachers, parents, and community members hold negative beliefs about disability; believe disabled children cannot learn in regular schools.

Impact: Disabled children are excluded; not enrolled; face discrimination and bullying.

Barrier 2: Lack of Trained Teachers Most teachers lack training in inclusive education and special needs; don't know how to teach diverse learners.

Impact: Teachers struggle to manage mixed-ability classrooms; disabled children don't receive quality teaching.

Barrier 3: Insufficient Resources and Funding Schools lack assistive devices, adapted materials, teaching aids, accessible facilities; limited budget for inclusive education.

Impact: Schools cannot implement inclusion properly; disabled children cannot access materials they need.

Barrier 4: Inaccessible School Infrastructure Many schools lack ramps, accessible toilets, elevators; buildings not designed for wheelchairs or mobility disabilities.

Impact: Children with physical disabilities cannot access school buildings or facilities.

Barrier 5: Poverty and Limited Family Support Poor families cannot afford transport, uniforms, school fees; may keep disabled children home for economic reasons or care.

Impact: Disabled children don't enroll; drop out; parents cannot support school-based inclusion efforts.

SECTION TWO (40 MARKS)

9. Describe causes and characteristics of the following groups of learners (20 marks)

i) Learners with learning disabilities [10 marks]

Causes:

- Genetic/hereditary factors (inherited from parents)
- Brain dysfunction or neurological differences
- Complications during pregnancy or birth (premature birth, brain injury)
- Environmental factors (poor nutrition, lack of stimulation)

Characteristics:

- Difficulty with reading, writing, or mathematics despite normal intelligence
- Struggle with processing information and following instructions
- Poor memory and concentration
- Difficulty organizing thoughts and expressing ideas
- May have average or above-average intelligence but underperform academically

Example: A child with dyslexia reads "b" as "d"; struggles with reading despite being intelligent.

ii) Learners with physical handicaps and other health impairments [10 marks]

Causes:

- Genetic factors (congenital conditions like cerebral palsy)
- Accidents or injuries (spinal cord injury, amputations)
- Diseases (polio, muscular dystrophy, asthma)
- Birth complications or premature birth

Characteristics:

- Limited mobility or inability to walk; use wheelchairs or crutches
- Difficulty with fine motor control (writing, self-care tasks)
- Fatigue or health complications that affect attendance
- Pain or discomfort affecting concentration
- May have normal cognitive ability but physical limitations

Example: A child with cerebral palsy has difficulty walking and controlling movement but is intellectually normal.

10. Discuss any 5 socio-cultural factors that influence exclusion of learners with special needs from education in Kenya [20 marks]

Factor 1: Negative Cultural Beliefs and Stigma Some communities view disability as a curse, punishment, or sign of witchcraft. Parents hide disabled children; communities reject them.

Impact: Disabled children not sent to school; face discrimination and isolation.

Factor 2: Gender Discrimination Girls with disabilities face double discrimination (gender + disability). Families prioritize boys' education over girls with disabilities.

Impact: Girls with disabilities excluded from school more than boys.

Example: A family sends a deaf boy to school but keeps a deaf girl home to do household chores.

Factor 3: Low Community Value of Education for Disabled Children Communities believe disabled children cannot succeed in school or benefit from education; see it as wasteful.

SIR OTONDE MICHAEL DELEGATE EDUCATION

Impact: Low enrollment of disabled children; parents don't support their schooling.

Factor 4: Poverty and Family Economic Constraints Poor families cannot afford school fees, transport, or uniforms. Disabled children need extra support (therapy, aids), making costs higher.

Impact: Disabled children from poor families excluded from school; kept home to help with income or care.

Factor 5: Limited Community Awareness and Sensitization Communities lack knowledge about inclusive education benefits; teachers and parents don't understand disability rights.

Impact: Resistance to including disabled children in schools; poor implementation of inclusive policies.

11. a) Analyze 4 curriculum modifications in inclusive setting [10 marks]

Modification 1: Simplification of Content Reduce the complexity of curriculum content while keeping core concepts. Teach fewer objectives at deeper level.

Example: Instead of learning 20 sight words, a child with intellectual disability learns 5 sight words very well.

Modification 2: Differentiation of Learning Activities Provide different activities for different learners in same classroom. Not all students do the same task.

Example: While other students write an essay, a student with dysgraphia draws pictures and labels them to show understanding.

Modification 3: Alternative Assessment Methods Use varied ways to assess learning: oral tests, projects, demonstrations, portfolios instead of only written exams.

Example: A deaf student demonstrates learning through sign language instead of written test.

Modification 4: Adapted Learning Resources and Materials Provide curriculum materials in different formats suited to learner needs.

Example: Braille books for blind students; large print for low vision; simplified readers for struggling readers.

11. b) Examine 4 ways of accommodating learners with special needs in inclusive settings in Kenya [10 marks]

Way 1: Provision of Assistive Technology and Devices Provide hearing aids, wheelchairs, communication boards, talking calculators, computers with screen readers.

Ensures: Children with disabilities can access learning independently.

Way 2: Environmental Modifications Install ramps for wheelchairs, accessible toilets, elevators, good lighting, clear pathways, modify furniture for accessibility.

Ensures: Physical accessibility to all school areas and classrooms.

Way 3: Deployment of Support Personnel Assign teaching assistants, sign language interpreters, note-takers, and specialized teachers within regular classrooms.

Ensures: Children receive individualized support to succeed academically and socially.

Way 4: Flexible Curriculum Implementation Allow extended time for tasks, modify teaching pace, reduce workload, use simplified language, provide frequent breaks.

Ensures: Children with different abilities can access same curriculum at their pace.

12. i) Describe any 4 international legal frameworks which support inclusive education [12 marks]

1. United Nations Convention on the Rights of Persons with Disabilities (CRPD, 2006)

This convention recognizes the right of persons with disabilities to inclusive education at all levels. It requires governments to ensure that learners with disabilities are not excluded from the general education system and that reasonable accommodations and support services are provided in regular schools.

Example: Provision of assistive devices, sign language interpreters, and accessible school buildings.

2. United Nations Convention on the Rights of the Child (CRC, 1989)

The CRC affirms that every child has a right to education without discrimination of any kind. It emphasizes equal opportunities and the best interests of the child, including children with disabilities.

Example: Ensuring children with disabilities access free and compulsory basic education.

SIR OTONDE MICHAEL DELEGATE EDUCATION

3. Salamanca Statement and Framework for Action on Special Needs Education (1994)

The Salamanca Statement calls on all governments to adopt inclusive education by enrolling all children in regular schools. It promotes child-centered teaching and adapting schools to meet diverse learner needs.

Example: Regular schools modifying curriculum and teaching methods to support learners with special needs.

4. Universal Declaration of Human Rights (UDHR, 1948)

The UDHR recognizes education as a fundamental human right for all people. It lays the foundation for equal access to education and non-discrimination, which supports inclusive education practices.

Example: Guaranteeing access to education for all learners regardless of disability or background.

12. ii) Discuss any 2 local legal frameworks for inclusion celebrated in Kenya today [8 marks]

Framework 1: The Constitution of Kenya (2010) Article 43 guarantees right to free quality education; Article 54 protects rights of persons with disabilities.

Celebration in Kenya: Schools required to implement inclusive education; disabled children have legal right to attend regular schools; discrimination against disabled learners is illegal.

Example: Schools cannot refuse to admit disabled children; must provide reasonable accommodations.

Framework 2: The Basic Education Act (2013) National law making education free and compulsory; requires inclusive and learner-centered education; prohibits discrimination.

Celebration in Kenya: Guides all schools to implement inclusive education; ensures disabled children access free education; mandates teacher training in inclusive practices; establishes quality standards for inclusive schools.

Example: Schools must enroll all children including those with disabilities; government funds support inclusive education implementation.

1. Define the following concepts (3 marks)

i) Inclusive Education

All children, regardless of abilities or disabilities, learn together in the same regular classroom with necessary support and modifications provided.

SIR OTONDE MICHAEL DELEGATE EDUCATION.

Example: A child with cerebral palsy learns alongside non-disabled peers in the same class with a teaching assistant.

ii) Integration

Children with disabilities attend regular schools but may be placed in separate classrooms or resource rooms; limited interaction with non-disabled peers.

Example: A deaf child attends a regular school but spends most time in a special unit; joins mainstream class only for some subjects.

iii) Special Needs Education

Education provided to children with disabilities or learning difficulties using specialized teaching methods, materials, and support to help them learn.

Example: A child with dyslexia receives specialized reading instruction using different methods than regular classroom.

2. State two key features of inclusive education (2 marks)

Feature 1: Full Participation All children participate fully in all classroom activities, learning, and social events alongside their peers.

Feature 2: Support and Adaptation The school system is modified and support services are provided to ensure all children can access the curriculum and succeed.

3. History of education of children with Special Needs can be divided into three phases. Explain each of the phases (6 marks)

Phase 1: Isolation/Institutionalization (1800s-1950s)

- Children with disabilities kept at home or in institutions
 - No formal education provided
 - Society viewed disability as shameful
 - Completely separated from society
-

Phase 2: Segregation (1950s-1970s)

- Special schools created exclusively for disabled children
- Children learned separately from non-disabled peers

SIR OTONDE MICHAEL DELEGATE EDUCATION

- Specialized staff and resources available
- Still excluded from regular community schools

Example: Schools only for blind children; schools only for deaf children.

Phase 3: Integration/Inclusion (1970s-Present)

- Children with disabilities began attending regular schools
 - Initially in separate classrooms (integration)
 - Later in mainstream classrooms (inclusion)
 - Shift toward full inclusion in regular schools with support
-

4. Identify three benefits of inclusive education (3 marks)

Benefit 1: Social Development Children with disabilities develop friendships, social skills, confidence, and sense of belonging through interaction with peers.

Benefit 2: Academic Achievement All children learn together; peer teaching occurs; disabled children benefit from regular curriculum and positive role models.

Benefit 3: Societal Change Non-disabled children learn acceptance and empathy; communities become more inclusive; reduces stigma and discrimination against disabled people.

5. Give examples of learners with: (2 marks)

i) Sensory Impairments (1 mark)

- **Blindness/Visual Impairment** - Cannot see; uses Braille to read
 - **Deafness/Hearing Impairment** - Cannot hear; uses sign language to communicate
 - **Deaf-blindness** - Both sight and hearing loss
-

ii) Emotional and Behaviour Disorder (1 mark)

- **ADHD (Attention Deficit Hyperactivity Disorder)** - Difficulty concentrating; hyperactive; impulsive behavior
 - **Conduct Disorder** - Aggressive behavior; violates others' rights; difficult to control
 - **Anxiety Disorder** - Excessive worry; fear; difficulty participating in activities
-

6. Differentiate between learners with intellectual disability and those with gifts and talents (1 mark)

Learners with Intellectual Disability:

- Delayed cognitive development; struggle with problem-solving
- Perform below grade level; need simpler curriculum
- Require more time and support to learn

Learners with Gifts and Talents:

- Advanced cognitive abilities; quick learners
- Perform above grade level; need enriched curriculum
- Require challenging tasks to stay engaged

Difference: Intellectual disability = below average ability | Gifts and talents = above average ability

7. Define a child living in poverty according to UNICEF (2 marks)

A child living in poverty is a child who lacks access to basic human needs such as food, clean water, shelter, clothing, healthcare, and education needed for survival and normal development.

UNICEF Definition Focus: Multidimensional poverty considering deprivation in multiple areas (not just lack of money) including health, education, nutrition, water, sanitation, electricity, housing, and information.

8. State any one barrier to parental family participation in education of a child with disabilities in Kenya (1 mark)

Barrier: Lack of Awareness and Understanding Many parents in Kenya lack knowledge about inclusive education benefits and their child's educational rights; don't understand how to support learning.

OR

Barrier: Poverty and Economic Constraints Poor families cannot afford school fees, transport, assistive devices, or therapy needed for disabled child's education.

OR

Barrier: Cultural Beliefs and Stigma Some cultural communities view disability as curse; parents hide disabled children; reluctant to send them to school due to shame.

SIR OTONDE MICHAEL DELEGATE EDUCATION

SECTION A

1. Explain the following terms (4 marks)

(a) Integration [2 Marks]

Children with disabilities attend regular schools but may be in separate classrooms or resource rooms. Limited interaction with non-disabled peers; child adapts to existing system.

Example: A deaf child attends regular school but spends most time in special unit; joins mainstream class only for assembly.

(b) Inclusion [2 Marks]

All children learn together in the same regular classroom with support and adaptations. Full participation and sense of belonging for all learners.

Example: A child with Down syndrome sits in regular class, participates in all activities with teaching assistant support.

2. Identify TWO benefits of inclusive education [2 Marks]

Benefit 1: Social Development Disabled children develop friendships, confidence, social skills, and belong to the community through interaction with non-disabled peers.

Benefit 2: Attitude Change Non-disabled children learn acceptance and respect for differences; communities become more inclusive; reduces discrimination.

3. Distinguish between accommodation and adoption in inclusive setting [4 Marks]

Accommodation Changes made to environment/teaching so disabled child can access existing curriculum without changing content.

Example: Providing ramp for wheelchair user; large print books for low vision student; sign language interpreter for deaf student.

Adoption Modifying the curriculum content and learning objectives to suit child's ability level.

Example: Child with intellectual disability learns 5 sight words instead of 20; does simpler math than classmates.

Key Difference: Accommodation = same curriculum, different access | Adoption = different/simpler curriculum

4. Debate TWO possible solutions to school factors leading to exclusion in regular classrooms [2 Marks]

Solution 1: Teacher Training Train teachers in inclusive education strategies, special needs, and differentiated teaching to handle diverse learners effectively.

Solution 2: Provision of Resources Allocate budget for teaching assistants, assistive devices, adapted materials, and accessible infrastructure to support inclusion.

5. Outline TWO reasons for children to desert and opt to live in the streets [2 Marks]

Reason 1: Extreme Poverty Families unable to afford basic needs; children escape to find food, shelter, survival on streets.

Reason 2: Abuse and Neglect Escape abusive, neglectful, or violent home environments seeking safety and freedom on streets.

6. Describe THREE types of learning disabilities [6 Marks]

Type 1: Dyslexia Difficulty with reading and spelling despite normal intelligence. Words appear jumbled or reversed.

Characteristics: Struggles recognizing letters and words; slow reader; spelling errors.

Example: Child reads "was" as "saw"; confuses similar-looking words.

Type 2: Dyscalculia Difficulty with mathematics and number concepts. Cannot grasp quantity, operations, or number relationships.

Characteristics: Cannot understand addition, subtraction; struggles with telling time; confuses numbers.

Example: Child cannot understand $2+3=5$ despite repeated teaching; struggles with money concepts.

Type 3: Dysgraphia Difficulty with writing and handwriting despite normal intelligence. Poor fine motor control; disorganized expression.

Characteristics: Illegible handwriting; poor spelling; difficulty organizing thoughts on paper; slow writer.

Example: Child's handwriting is unreadable; struggles to organize writing; makes many spelling errors.

SECTION B: 40 MARKS

7. Analyze FOUR ways children in difficult circumstances can be restored to access education [20 Marks]

Way 1: Fee-Free/Subsidized Education Remove financial barriers through free school meals, uniforms, books, and transport.

Implementation: Government subsidizes fees; NGOs provide meals; communities donate uniforms.

Way 2: Flexible/Alternative Schooling Offer evening classes, part-time schooling, mobile schools, or online learning for working/street children.

Implementation: Evening classes for working children; mobile schools reach remote areas; distance learning options.

Way 3: Psychosocial Support and Rehabilitation Provide counseling, therapy, and safe spaces to help children recover from trauma and rebuild confidence.

Implementation: School counselors; support groups; mentoring; child-friendly spaces; trauma counseling.

Way 4: Family Economic Support Programs Strengthen families through cash transfers and income programs so children don't need to leave school.

Implementation: Conditional cash transfer programs; vocational training for parents; community support networks.

8. Assess FIVE teaching strategies in Inclusive Setting [20 Marks]

Strategy 1: Differentiated Instruction Provide different tasks at different levels for same class based on learner abilities.

Effectiveness: All learners progress at own pace; keeps everyone engaged and challenged.

Strategy 2: Cooperative Learning/Group Work Mix ability levels in groups; disabled and non-disabled students work together helping each other.

Effectiveness: Peer teaching; builds relationships; all contribute according to ability.

SIR OTONDE MICHAEL DELEGATE EDUCATION.

Strategy 3: Visual Aids and Manipulatives Use pictures, charts, real objects instead of just verbal explanation.

Effectiveness: Helps visual learners; makes abstract concepts concrete; reaches diverse learners.

Example: Teach math using blocks, counters, pictures—not just numbers.

Strategy 4: Multisensory Teaching Engage multiple senses (sight, sound, touch, movement) when teaching.

Effectiveness: Reaches visual, auditory, kinesthetic learners; reinforces learning multiple ways.

Example: Teach alphabet through songs, letter shapes to touch, movement activities.

Strategy 5: Peer Tutoring and Buddy System Pair strong learner with struggling learner; non-disabled support disabled student.

Effectiveness: Personalized support; disabled child feels included; both children benefit.

9. Discuss FIVE ways of accommodating learners with special needs in Inclusive settings [20 Marks]

Way 1: Physical Accessibility Install ramps, accessible toilets, elevators, wide doorways, clear pathways, appropriate furniture.

Ensures: Children with mobility disabilities move independently and access all areas.

Way 2: Adapted Teaching Materials Provide materials in different formats: Braille, large print, audio recordings, simplified texts, visual supports.

Ensures: All children access information regardless of disability.

Way 3: Flexible Curriculum and Instruction Simplify content, use different teaching approaches, allow extended time, reduce workload, use simple language.

Ensures: Children with different abilities access curriculum at their pace.

Way 4: Assistive Technology and Aids Provide hearing aids, wheelchairs, communication devices, screen readers, magnifying glasses, talking calculators.

Ensures: Children with sensory/physical disabilities fully participate.

Way 5: Use of Support Personnel Provide teaching assistants, sign language interpreters, note-takers, and therapists in classrooms.

Ensures: Children receive individualized support to succeed.

10. Discuss FIVE barriers to inclusive education in Kenya [20 Marks]

Barrier 1: Negative Attitudes and Stigma Teachers, parents, communities hold negative beliefs about disability; believe disabled children cannot learn in regular schools.

Impact: Disabled children excluded; face discrimination and bullying; low enrollment.

Barrier 2: Lack of Trained Teachers Most teachers lack training in inclusive education and special needs; don't know how to teach diverse learners.

Impact: Teachers struggle with mixed-ability classes; disabled children don't receive quality teaching.

Barrier 3: Insufficient Resources and Funding Schools lack assistive devices, adapted materials, teaching aids, accessible facilities; limited budget.

Impact: Schools cannot implement inclusion; disabled children cannot access needed materials.

Barrier 4: Inaccessible School Infrastructure Many schools lack ramps, accessible toilets, elevators; buildings not designed for wheelchairs or mobility disabilities.

Impact: Children with physical disabilities cannot enter buildings or access facilities.

Barrier 5: Poverty and Limited Family Support Poor families cannot afford transport, uniforms, school fees; disabled children may need extra support (therapy, aids) increasing costs.

Impact: Disabled children from poor families excluded; parents cannot support school inclusion efforts.
