

ESP210 PAST PAPERS WITH ANSWERS BY SIR OTONDE

1. Describe one indicator for each of the following:

- **Growth:**
Measurable physical changes in the body, such as an increase in height or weight.
 - **Development:**
Improvement in functional skills or capabilities, such as cognitive abilities, language acquisition, or emotional maturity.
-

2. Explain how the following may influence child development:

- **Nutrition:**
Nutrition directly impacts brain and body development. A lack of essential nutrients can lead to delays in cognitive, emotional, and physical growth, while a balanced diet fosters proper neural connections, motor skills, and learning abilities.
 - **Sleep, rest, and activity:**
Sleep and rest are critical for memory consolidation, emotional regulation, and brain development, while physical activity supports gross and fine motor skills and social development through interaction with peers.
-

3. Suggest two challenges encountered in Kenya in the provision of children's rights:

- Limited access to quality education, often due to poverty or regional disparities, hinders cognitive and social development.
 - High rates of child labor and exploitation prevent children from reaching developmental milestones due to psychological stress and lack of supportive environments.
-

4. Describe the developmental milestones experienced during the first two weeks after fertilization:

- Fertilization leads to the formation of a zygote, the earliest stage of life.
 - Rapid cell division (cleavage) forms a blastocyst, which migrates toward and implants in the uterine wall.
 - Basic structures for later development, such as the germ layers (ectoderm, mesoderm, endoderm), begin to form.
 - These processes lay the foundation for physical and functional development.
-

5. Describe two reflexes that newborns show immediately after birth:

- **Rooting reflex:** This reflex ensures survival by helping the baby find the breast or bottle for feeding when their cheek is touched.
 - **Grasp reflex:** When an object touches the baby's palm, they instinctively close their fingers around it, aiding early bonding and interaction.
-

6. Describe two physical and physiological changes in girls during adolescence:

- **Physical changes:** Development of secondary sexual characteristics, such as breast growth and widening of hips, prepares the body for reproductive functions.
 - **Physiological changes:** The onset of the menstrual cycle (menarche) and increased production of sex hormones (estrogen) influence mood, emotions, and reproductive system development.
-
-

Question Two

(a) Citing examples, illustrate four ways in which physical development influences social development.

1. **Motor skills development:** Improved motor skills (e.g., walking and running) allow children to engage in social play with peers.
 2. **Puberty:** Physical changes during adolescence, like growth spurts, influence peer relationships and self-esteem.
 3. **Physical health:** Healthy physical development enables participation in social activities, while illnesses can limit interaction.
 4. **Body image:** Physical appearance impacts self-confidence and peer acceptance, shaping social interactions.
-

(b) Describe the first two stages of language development.

1. **Pre-linguistic stage (0–12 months):** Babies communicate through crying, cooing, and babbling. They start to recognize familiar sounds and respond to speech.
 2. **Holophrastic stage (12–18 months):** Children use single words (holophrases) to express complete thoughts (e.g., saying “milk” to mean “I want milk”).
-

(c) With reference to Lev Vygotsky, describe the following concepts:

1. **Zone of Proximal Development (ZPD):** The range of tasks a child cannot complete alone but can accomplish with guidance or collaboration (e.g., learning to tie shoes with help).

2. **Scaffolding:** The support provided by a more knowledgeable person (e.g., a teacher or parent) to help a child complete a task, gradually reducing assistance as the child becomes more competent.
-

Question Three

(a) Describe the structure of personality according to Sigmund Freud.

1. **Id:** The unconscious part driven by basic instincts and immediate gratification (e.g., hunger, pleasure).
 2. **Ego:** The rational part that mediates between the Id and reality, making decisions.
 3. **Superego:** The moral component that incorporates societal rules and values, guiding behavior.
-

(b) Describe the last three stages of personality development according to Erik Erikson.

1. **Intimacy vs. Isolation (Young adulthood):** Building close relationships or experiencing loneliness and isolation.
 2. **Generativity vs. Stagnation (Middle adulthood):** Contributing to society and nurturing the next generation or feeling unproductive.
 3. **Integrity vs. Despair (Old age):** Reflecting on life with a sense of fulfillment or regret over missed opportunities.
-

(c) Using a suitable example, explain the identity diffusion status as proposed by James Marcia.

Identity diffusion occurs when an individual has not explored or committed to a clear sense of identity.

- Example: A teenager avoids thinking about career goals or personal values and shows little interest in planning for the future.
-

Question Four

(a) Discuss the first two levels of moral development according to Kohlberg's theory.

1. **Pre-conventional Level:**
 - Stage 1: Obedience and Punishment - Decisions are based on avoiding punishment (e.g., following rules to avoid scolding).
 - Stage 2: Individualism and Exchange - Actions are based on self-interest and reciprocal benefits (e.g., helping others to get help in return).
-

(b) Discuss the four attachment styles and the consequences of each on a child's later development.

1. **Secure attachment:** Leads to healthy relationships, trust, and emotional stability in adulthood.
 2. **Avoidant attachment:** May result in difficulty forming close relationships and emotional detachment.
 3. **Ambivalent attachment:** Often causes anxiety in relationships and fear of abandonment.
 4. **Disorganized attachment:** Associated with fear, confusion, and difficulty managing emotions in later life.
-

(c) Explain two ways in which a teacher would promote moral development among learners.

1. **Modeling positive behavior:** Demonstrating fairness, honesty, and empathy in interactions with students.
 2. **Encouraging discussions:** Facilitating debates on moral dilemmas to help learners develop critical thinking and ethical reasoning.
-
-

1(a) Explain the philosophical views about child development by Plato and Aristotle.

- **Plato:** Believed that children are born with innate knowledge and learning is the process of recollecting this knowledge through reasoning.
 - **Aristotle:** Argued that children are born as blank slates, and their knowledge develops through experience and learning.
-

(b) Explain the key milestones in language development during the pre-speech stage.

1. **Crying (0–2 months):** Newborns express needs through crying.
 2. **Cooing (6–8 weeks):** Babies produce vowel-like sounds (e.g., "oooh" or "ahhh").
 3. **Babbling (4–6 months):** Repeated consonant-vowel combinations, such as "ba-ba" or "da-da."
 4. **Gestures (6–9 months):** Babies begin using gestures like pointing to communicate.
-

(c) Using relevant examples, explain the following concepts as used by Lev Vygotsky:

1. **Scaffolding:**
Support given by a more knowledgeable person to help a child perform tasks they cannot do alone (e.g., a teacher helping a child solve a math problem step-by-step).

2. **Zone of Proximal Development (ZPD):**

The gap between what a child can do independently and what they can achieve with guidance (e.g., a child learning to ride a bike with help from a parent).

(d) With the use of appropriate examples, explain three types of childhood play.

1. **Solitary play:** Playing alone (e.g., a child building blocks by themselves).
 2. **Parallel play:** Playing alongside others without direct interaction (e.g., children drawing separately but sitting together).
 3. **Cooperative play:** Playing together with shared goals (e.g., children working as a team in a game).
-

(e) Referring to the rights of the child, explain two challenges faced in implementing the rights.

1. **Poverty:** Limited resources prevent access to education, healthcare, and proper nutrition.
 2. **Cultural practices:** Harmful traditions, such as child marriage or child labor, violate children's rights.
-

2(a) Compare growth and development as used in developmental psychology.

- **Growth:** Refers to physical changes, such as an increase in height and weight.
 - **Development:** Refers to overall progress in skills, abilities, and emotional maturity (e.g., learning to speak, problem-solve, or interact socially).
-

(b) Explain the following principles of development:

1. **Development is a directional and sequential process:**
Development occurs in a predictable order (e.g., babies learn to crawl before they walk).
 2. **Development is a result of maturation and learning:**
Growth depends on genetic factors (maturation) and experiences (learning) (e.g., brain development and exposure to language).
 3. **Development proceeds from general to specific:**
Skills develop from simple to complex (e.g., a baby first moves their arms broadly, then learns to grasp objects with their fingers).
-

3(a) Discuss the three stages of prenatal development outlining the major achievements of each.

1. **Germinal stage (0–2 weeks):**
Fertilization occurs, forming a zygote that implants into the uterine wall.
2. **Embryonic stage (3–8 weeks):**
Major organs and systems (e.g., heart, brain, and spinal cord) begin to form.
3. **Fetal stage (9 weeks–birth):**
Rapid growth occurs, with the development of fully functioning organs and sensory abilities.

(b) Explain how the following teratogens affect prenatal development:

i. Rubella (2 marks)

Rubella, or German measles, can cause severe birth defects if a pregnant woman gets infected. These defects include heart problems, hearing loss, and developmental delays in the baby.

ii. Alcohol (2 marks)

Alcohol use during pregnancy can lead to Fetal Alcohol Syndrome (FAS), causing poor growth, learning difficulties, and physical abnormalities in the child.

iii. Rhesus incompatibility (2 marks)

If a mother and baby's blood types are incompatible (e.g., mother is Rh-negative and baby is Rh-positive), the mother's body may attack the baby's red blood cells, leading to anemia, jaundice, or even miscarriage.

4 (a) Describe the first four psychosocial stages of personality development according to Erik Erickson. (12 marks)

1. **Trust vs. Mistrust (0-1 year):** Infants learn to trust caregivers who provide consistent care. If care is unreliable, mistrust develops.
2. **Autonomy vs. Shame and Doubt (1-3 years):** Toddlers develop independence by making simple choices. Overcontrol or criticism leads to doubt in their abilities.
3. **Initiative vs. Guilt (3-6 years):** Children initiate activities and interactions. If they are discouraged, they may feel guilty about trying new things.
4. **Industry vs. Inferiority (6-12 years):** School-age children develop skills and confidence. Failure or criticism may result in feelings of inferiority.

(b) Discuss the identity statuses of adolescents according to James Marcia. (8 marks)

1. **Identity Achievement:** Adolescents explore options and commit to their beliefs and goals.
2. **Identity Moratorium:** They explore different roles but have not yet made firm commitments.

3. **Identity Foreclosure:** Adolescents accept others' values or roles without exploring alternatives.
 4. **Identity Diffusion:** They lack direction and have not explored or committed to any identity.
-
-

1 (a) Describe the principle that:

i. Development proceeds from general to specific. (2 marks)

Development starts broadly and becomes more focused. For example, babies first move their arms before learning to grasp objects with their fingers.

ii. Development is a directional process. (2 marks)

Development follows a pattern: it moves from head to toe (cephalocaudal) and from the center of the body outward (proximodistal).

(b) Give four functions of the placenta. (4 marks)

1. Supplies oxygen to the baby.
 2. Provides nutrients for growth.
 3. Removes waste products from the baby's blood.
 4. Protects the baby from harmful substances.
-

(c) Identify three reflexes of a neonate which show that touch is the most developed sense. (6 marks)

1. **Rooting reflex:** The baby turns its head when the cheek is touched.
 2. **Sucking reflex:** The baby sucks when something touches its mouth.
 3. **Grasping reflex:** The baby grips when the palm is touched.
-

(d) State three reasons to show why baby biographies did not give good scientific data. (6 marks)

1. They were based on small, unrepresentative samples.
 2. Observations were often subjective and biased.
 3. Lack of standardized methods made the results unreliable.
-

(e) Explain three effects of early and late maturation in adolescent boys. (6 marks)

1. **Early maturation:** Boys may gain confidence but could face pressure to act older.

2. **Late maturation:** Boys might feel insecure or teased by peers.
 3. **Both:** Changes can affect social interactions and self-esteem.
-

(f) Explain the characteristics of motherese. (4 marks)

Motherese is a way adults talk to babies. It includes:

1. High-pitched voice.
 2. Slow, clear speech.
 3. Repetition of words.
 4. Exaggerated expressions.
-

2 (a) Differentiate between identity and identity crisis. (4 marks)

- **Identity:** Knowing who you are and your role in society.
- **Identity crisis:** A period of confusion when one struggles to define themselves.

(b) Describe the four identity statuses according to James Marcia. (8 marks)

1. **Identity Achievement:** Explored options and made commitments.
2. **Identity Moratorium:** Exploring but not committed yet.
3. **Identity Foreclosure:** Committed without exploring options.
4. **Identity Diffusion:** No exploration or commitment.

(c) Explain the first four stages of Erikson's stage of personality development. (8 marks)

1. **Trust vs. Mistrust** (0-1 year): Learning to trust caregivers.
 2. **Autonomy vs. Shame and Doubt** (1-3 years): Developing independence.
 3. **Initiative vs. Guilt** (3-6 years): Taking initiative in activities.
 4. **Industry vs. Inferiority** (6-12 years): Building confidence through skills.
-

3 (a) Describe the four stages of language development. (12 marks)

1. **Cooing** (0-3 months): Making vowel sounds like "ah."
2. **Babbling** (4-9 months): Combining vowels and consonants like "ba-ba."
3. **One-word stage** (12-18 months): Saying single words like "mama."
4. **Two-word stage** (18-24 months): Forming simple phrases like "want milk."

(b) Explain the LAD according to Noam Chomsky. (3 marks)

The **Language Acquisition Device (LAD)** is a mental tool that helps children learn language naturally, without formal teaching.

(c) Give five factors that may enhance language development. (5 marks)

1. Talking frequently to the child.

2. Reading books together.
 3. Encouraging questions.
 4. Exposing the child to a rich vocabulary.
 5. Providing a supportive environment.
-

4 (a) Describe the three qualities of attachment. (6 marks)

1. **Secure attachment:** Feeling safe and trusting caregivers.
2. **Avoidant attachment:** Avoiding close relationships with caregivers.
3. **Ambivalent attachment:** Being clingy but also rejecting at times.

(b) Explain four causes of heightened emotionality among adolescents. (8 marks)

1. Hormonal changes during puberty.
2. Peer pressure and social expectations.
3. Struggles with identity.
4. Academic and parental stress.

(c) Describe the first stage of cognitive development according to Jean Piaget. (6 marks)

The **sensorimotor stage** (0-2 years): Babies learn through their senses and actions, like touching and grasping. They develop object permanence, realizing objects still exist even when not seen.

Question One

(a) Outline three contributions of John Locke in the understanding of child development. (3 Marks)

1. Children are born as a "blank slate" (tabula rasa), shaped by experience.
2. Emphasized the importance of education and environment in shaping behavior.
3. Advocated for the use of rewards and punishments in guiding behavior.

(b) Explain the principle that development is directional. (4 Marks)

Development follows specific patterns:

1. **Cephalocaudal:** Growth occurs from the head downwards.
2. **Proximodistal:** Development progresses from the center of the body outward.

(c) Describe three survival reflexive behaviors of the neonate. (3 Marks)

1. **Rooting reflex:** The baby turns toward a touch on the cheek.
2. **Sucking reflex:** The baby sucks when something touches the mouth.
3. **Grasping reflex:** The baby grasps when the palm is touched.

(d) Identify three roles of play in cognitive development of children. (5 Marks)

1. Enhances problem-solving skills.
2. Encourages creativity and imagination.
3. Improves social interaction and cooperation.

(e) Highlight four reasons why a teacher should study developmental psychology. (4 Marks)

1. Understand how students learn at different ages.
2. Adapt teaching methods to suit developmental stages.
3. Identify and address learning challenges.
4. Promote holistic development (cognitive, emotional, and social).

(f) State three types of attachments among learners. (3 Marks)

1. **Secure attachment:** Learners feel safe and supported.
2. **Avoidant attachment:** Learners avoid close connections.
3. **Ambivalent attachment:** Learners seek attention but show mistrust.

(g) Give four achievements of children in the concrete operational stage according to Jean Piaget's cognitive development theory. (4 Marks)

1. Understand the concept of conservation.
2. Develop logical thinking about concrete objects.
3. Classify objects into categories.
4. Recognize relationships like cause and effect.

(h) State three characteristics of midlife crisis in adulthood. (3 Marks)

1. Reevaluating life goals and achievements.
2. Feeling dissatisfied with life progress.
3. Increased focus on personal identity and legacy.

Question Two

(a) Describe the three stages of parental development. Highlight the key events. (6 Marks)

1. **Preparation stage:** Parents anticipate and prepare for a child.
2. **Active parenting stage:** Focus on nurturing and guiding the child.
3. **Letting go stage:** Adjusting as the child becomes independent.

(b) With examples, explain how teratogens may affect the unborn child. (8 Marks)

1. **Alcohol:** Can cause Fetal Alcohol Syndrome (low birth weight, learning difficulties).
2. **Drugs:** May lead to physical abnormalities or withdrawal symptoms.
3. **Infections (e.g., rubella):** Can result in hearing loss or heart defects.
4. **Radiation:** May lead to birth defects or developmental delays.

(c) Explain Noam Chomsky's theory of language acquisition in children. (6 Marks)

Chomsky proposed the **Language Acquisition Device (LAD)**, an inborn ability to learn language. It allows children to understand grammar and form sentences naturally as they are exposed to language.

Question Three

(a) State four significance of peer relations to an adolescence. (4 Marks)

1. Provide emotional support.
2. Help in forming identity and self-concept.
3. Teach social skills like cooperation and communication.
4. Influence decision-making and behavior.

(b) Describe four reasons why adolescence is a period of heightened emotions. (8 Marks)

1. Hormonal changes during puberty.
2. Increased sensitivity to social acceptance.
3. Struggles with identity and independence.
4. Academic and peer pressure.

(c) Explain how a teacher may apply the formal operational stage in teaching adolescents. (8 Marks)

1. Use abstract concepts and hypothetical scenarios in lessons.
 2. Encourage problem-solving and critical thinking.
 3. Allow debates and discussions to explore multiple perspectives.
 4. Integrate real-world applications to make learning relevant.
-
-

(a) What do we mean when we say that development is multi-directional?

Development is multi-directional because it involves growth in some areas while there may be declines in others. For example, as we age, physical abilities may decline, but emotional understanding can improve.

(b) State the four identity statuses proposed by James Marcia.

1. **Identity diffusion:** No commitment and no exploration of identity.
 2. **Identity foreclosure:** Commitment made without exploring alternatives.
 3. **Identity moratorium:** Exploring options but not yet committed.
 4. **Identity achievement:** Commitment after exploration.
-

(c) Identify three reflexive behaviours of the neonate.

1. **Rooting reflex:** Turning the head toward a touch on the cheek.
 2. **Sucking reflex:** Sucking when something touches the roof of the mouth.
 3. **Moro reflex:** Spreading and then closing arms in response to a loud sound or sudden movement.
-

(d) Give four achievements of the children in the concrete operational stage according to Piaget's Cognitive Development Theory.

1. **Conservation:** Understanding that quantity doesn't change even if the shape changes.
 2. **Classification:** Grouping objects based on shared characteristics.
 3. **Seriation:** Arranging items in a logical order, such as from smallest to largest.
 4. **Reversibility:** Knowing that actions can be reversed (e.g., understanding that $2+3=5$ and $5-3=2$).
-

(e) Distinguish the following concepts applied in middle adulthood:

1. **Climacteric syndrome:** Refers to physical and hormonal changes, especially in menopause for women or reduced testosterone in men.
 2. **Midlife crisis:** A psychological phase where individuals question their life goals and achievements, leading to major lifestyle changes.
-

(f) Explain the following terms as they relate to language development:

1. **Motherese:** Simplified and exaggerated speech used by adults when talking to babies to help them understand language.
 2. **Overextension:** When a child uses one word to refer to a broad range of objects (e.g., calling all animals "dog").
 3. **Overregularization:** Applying grammar rules too widely, such as saying "goed" instead of "went."
-

(g) Identify two challenges faced by adolescents and state how they can be resolved.

1. **Identity confusion:** Adolescents struggle to understand who they are.
 - **Resolution:** Encourage exploration and provide supportive environments.
 2. **Peer pressure:** Feeling forced to conform to group behaviors.
 - **Resolution:** Teach decision-making skills and self-confidence.
-

(h) Explain three developmental tasks of early childhood according to Havighurst.

1. **Learning to walk:** Mastering basic motor skills.
 2. **Learning to talk:** Developing communication skills.
 3. **Learning self-control:** Managing emotions and behavior, such as toilet training.
-
-

Question Two

(a) Compare and contrast the contributions of John Locke and Jean-Jacques Rousseau concerning child development.

- **John Locke:** Believed children are born as a "blank slate" (tabula rasa) and that experiences shape their development. He emphasized the role of environment and education.
 - **Jean-Jacques Rousseau:** Believed children are born good and develop naturally when allowed freedom. He emphasized innate abilities and minimal adult interference.
 - **Comparison:** Both agreed that early life is critical for development but differed on the role of external influences versus natural growth.
-

(b) Explain three contributions of the Child Research Institutes to the historical development of child development.

1. **Scientific studies:** Provided research on milestones, behaviors, and child psychology.
 2. **Educational programs:** Developed teaching methods and interventions tailored to children's needs.
 3. **Policy influence:** Influenced laws on child welfare and education through evidence-based findings.
-

(c) Discuss three reasons why the study of child development is important to a teacher.

1. **Understanding learning stages:** Helps teachers create age-appropriate lessons.
 2. **Recognizing challenges:** Enables teachers to identify and support children with developmental delays.
 3. **Building relationships:** Assists in fostering positive interactions with students.
-

Question Three

(a) Describe the support structures that are formed during the embryonic stage of prenatal development.

1. **Placenta:** Provides oxygen and nutrients to the fetus while removing waste.
2. **Umbilical cord:** Connects the fetus to the placenta, enabling nutrient and waste exchange.

3. **Amniotic sac:** Surrounds and cushions the fetus, protecting it from physical harm.
4. **Amniotic fluid:** Maintains temperature and supports fetal movement.

(b) Describe four ways in which play enhances the motor development of the child.

1. **Running and jumping:** Improves gross motor skills like balance and coordination.
2. **Building blocks:** Enhances fine motor skills and hand-eye coordination.
3. **Catching or throwing balls:** Develops spatial awareness and reflexes.
4. **Dancing:** Encourages rhythm, flexibility, and muscle control.

(c) Explain four constraints that may be encountered as parents and teachers try to satisfy the child's right to full opportunity for play and recreation.

1. **Limited resources:** Lack of playgrounds or equipment.
2. **Time constraints:** Busy schedules for both parents and children.
3. **Cultural restrictions:** Some communities may not prioritize play.
4. **Safety concerns:** Fear of accidents or unsafe environments.

Question Four

(a) Using appropriate examples, describe the first five stages of Erik Erikson's theory of personality development.

1. **Trust vs. Mistrust (Infancy):** Babies learn to trust caregivers when needs are met (e.g., feeding on time).
2. **Autonomy vs. Shame and Doubt (Toddlerhood):** Learning independence, like toilet training, builds confidence.
3. **Initiative vs. Guilt (Preschool):** Exploring and trying new things, like asking questions, fosters initiative.
4. **Industry vs. Inferiority (School Age):** Completing tasks, like homework, builds competence.
5. **Identity vs. Role Confusion (Adolescence):** Developing a sense of self through exploration, such as choosing a career.

(b) What is the relevance of Erik Erikson's theory of personality development to child development?

1. **Stages guide parenting and teaching:** Each stage provides insight into the child's needs and challenges.
 2. **Supports emotional development:** Emphasizes the importance of emotional growth at different ages.
 3. **Focuses on relationships:** Highlights the role of caregivers, peers, and society in shaping personality.
-
-

Question One

a) Show the relationship between growth and development.

Growth refers to the physical changes in size, such as height, weight, and muscle mass, while development involves the overall progress in skills, behaviors, and abilities, including emotional, intellectual, and social aspects. Both are interconnected as growth provides the foundation for development.

b) Highlight five ways in which caregivers can promote the achievement of children's psychosocial needs.

1. Providing emotional support and affection.
2. Encouraging independence and decision-making.
3. Offering consistent discipline and guidance.
4. Creating a safe and stable environment.
5. Engaging in open communication to understand their feelings and needs.

c) Identify five contributions of John Locke (1632–1704) to the study of developmental psychology.

1. Emphasized the role of the environment in shaping behavior.
2. Advocated the "tabula rasa" (blank slate) theory, suggesting children are born without innate traits.
3. Highlighted the importance of education in shaping character.
4. Encouraged positive reinforcement over punishment.
5. Stressed the significance of experience in learning and development.

d) Explain four sources of conflict between adolescents and their parents.

1. Desire for independence versus parental control.
2. Differences in values and beliefs.
3. Peer influence conflicting with parental expectations.
4. Communication gaps due to emotional and cognitive changes.

e) Identify four developmental tasks of adolescents as proposed by Havighurst.

1. Achieving a sense of identity.
2. Developing mature relationships with peers.
3. Preparing for economic independence.
4. Establishing personal values and ethics.

f) Explain the following neonatal reflexes:

- **Babinski:** When the sole of a baby's foot is stroked, the toes fan out and the big toe moves upward.
- **Rooting:** When the baby's cheek is touched, they turn their head toward the stimulus and open their mouth, searching for food.

g) Outline four effects of exposure to alcohol during the prenatal period.

1. Low birth weight.
 2. Physical abnormalities such as facial deformities.
 3. Cognitive impairments like learning difficulties.
 4. Risk of Fetal Alcohol Syndrome (FAS).
-

Question Two

a) Discuss Freud's psychosexual stages of personality development indicating the resulting personality in each stage.

1. **Oral Stage (0–1 year):** Focus on oral activities; unresolved issues may lead to dependency or aggression.
2. **Anal Stage (1–3 years):** Focus on bowel control; unresolved issues may cause excessive orderliness or messiness.
3. **Phallic Stage (3–6 years):** Focus on genital awareness; unresolved issues may lead to vanity or recklessness.
4. **Latency Stage (6–12 years):** Focus on social and intellectual development.
5. **Genital Stage (12+ years):** Focus on mature sexual relationships and personal identity.

b) Explain the different identity statuses according to James Marcia.

1. **Identity Diffusion:** Lack of commitment or exploration.
 2. **Foreclosure:** Commitment without exploration, often based on parental expectations.
 3. **Moratorium:** Exploration without commitment, searching for personal values.
 4. **Identity Achievement:** Commitment after exploration, leading to a clear sense of identity.
-

Question Three

a) Describe Jean Piaget's theory of cognitive development.

1. **Sensorimotor Stage (0–2 years):** Learning through senses and motor actions.
2. **Preoperational Stage (2–7 years):** Developing language and imagination but lacking logical thinking.
3. **Concrete Operational Stage (7–11 years):** Logical thinking about concrete objects but difficulty with abstract ideas.
4. **Formal Operational Stage (12+ years):** Ability to think abstractly, solve problems, and use hypothetical reasoning.

b) Explain four ways in which Jean Piaget's theory can be applied in teaching and learning.

1. Use hands-on activities for concrete learners.
2. Encourage exploration to promote discovery.
3. Adapt teaching methods to match developmental stages.
4. Include problem-solving tasks to develop critical thinking.

Question Four

a) Using Kohlberg's theory, describe moral development in children.

1. **Pre-conventional Level:** Morality is based on avoiding punishment and seeking rewards.
2. **Conventional Level:** Morality is based on social rules and expectations.
3. **Post-conventional Level:** Morality is based on universal ethical principles and personal conscience.

b) Highlight five ways in which a teacher can contribute to the development of moral values in learners.

1. Modeling ethical behavior.
 2. Encouraging respect and fairness.
 3. Promoting empathy through group activities.
 4. Addressing moral dilemmas in discussions.
 5. Reinforcing positive behavior with praise and recognition.
-
-

Question Two

a) Describe four types of play.

1. **Solitary Play:** Children play alone, focusing on their toys or activities.
2. **Parallel Play:** Children play side by side but do not interact directly.
3. **Associative Play:** Children play together and share materials but lack structured goals.
4. **Cooperative Play:** Children collaborate, follow rules, and work towards shared goals in play.

b) Explain the role of play in social and cognitive development of children.

- **Social Development:** Play helps children learn cooperation, sharing, and problem-solving in group settings.
- **Cognitive Development:** Play enhances creativity, critical thinking, and language skills through exploration and experimentation.

c) State four factors that have led to the decline of social play in contemporary society.

1. Increased screen time and use of electronic devices.
 2. Urbanization and lack of safe play spaces.
 3. Structured schedules with more focus on academics.
 4. Parental concerns about safety during outdoor play.
-

Question Three

a) Describe the characteristics of the sensorimotor stage according to Jean Piaget.

1. Infants explore the world through their senses and motor actions.
2. Development of object permanence (understanding that objects continue to exist when out of sight).
3. Reflex-based actions gradually transform into intentional behaviors.

b) State six developmental tasks at infancy according to Havighurst.

1. Learning to take solid foods.
2. Learning to walk.
3. Learning to talk.
4. Developing emotional attachments.
5. Gaining control over elimination processes (toilet training).
6. Beginning to form basic trust.

c) Describe the holophrastic stage of language development.

This stage, occurring around 12–18 months, is when children use single words (holophrases) to express complete thoughts. For example, saying "milk" may mean "I want milk."

Question Four

a) Describe the physical and psychological changes during adolescence.

- **Physical Changes:** Growth spurts, development of secondary sexual characteristics, and hormonal changes.
- **Psychological Changes:** Increased emotional sensitivity, self-consciousness, and search for identity.

b) Explain the psychological effects of early and late maturation in both boys and girls.

- **Early Maturation:**
 - Boys: Increased confidence but risk of aggression or risky behaviors.
 - Girls: Increased attention but potential for anxiety and self-esteem issues.
- **Late Maturation:**
 - Boys: Lower confidence, may face teasing but develop strong coping skills later.
 - Girls: Initially less attention but tend to have a positive self-image in adulthood.

c) What factors influence the development of identity in adolescents?

1. Peer relationships and social interactions.
2. Family support and guidance.
3. Cultural and societal expectations.
4. Personal experiences and challenges.

Question Five

a) Describe the last three stages of personality development according to Erik Erikson.

1. **Generativity vs. Stagnation (Middle Adulthood):** Focusing on contributing to society through work, parenting, or community involvement.
2. **Integrity vs. Despair (Late Adulthood):** Reflecting on life with a sense of fulfillment or regret.
3. **Ego Integrity vs. Despair (Old Age):** Accepting life's accomplishments or facing despair over unachieved goals.

b) Explain the following concepts as they relate to adulthood:

- **Midlife Crisis:** A period of self-reflection and reevaluation of goals during middle adulthood, often triggered by aging or life transitions.
- **Menopause:** The end of menstrual cycles in women, typically occurring in the late 40s or early 50s, accompanied by hormonal changes.
- **Climacteric Syndrome:** A phase in both men and women involving physical and emotional changes associated with aging.

c) **Five Physical Changes in Late Adulthood (Described):**

1. **Decreased Muscle Strength and Flexibility:**
As individuals age, muscles tend to lose mass and strength due to reduced physical activity and changes in muscle tissue. This results in difficulty performing tasks like lifting heavy objects or maintaining balance, which increases the risk of falls and injuries.
2. **Reduced Bone Density and Risk of Osteoporosis:**
Bones become thinner and less dense as the body absorbs minerals from the bones at a faster rate than it can replace them. This can lead to osteoporosis, a condition that makes bones fragile and more prone to fractures, especially in the hips, spine, and wrists.
3. **Slower Metabolism and Lower Energy Levels:**
Aging slows down the body's metabolic rate, which means that fewer calories are burned at rest. This can result in weight gain if dietary habits are not adjusted. Additionally, energy levels may decrease, making it harder to engage in prolonged physical activities.
4. **Decline in Sensory Abilities (Vision and Hearing):**
Vision problems such as difficulty focusing on close objects (presbyopia), cataracts, and reduced night vision become common. Hearing loss, particularly for high-pitched sounds, also occurs due to changes in the inner ear and auditory nerve, impacting communication and daily activities.
5. **Wrinkling of the Skin and Graying of Hair:**
Skin loses elasticity and collagen, leading to wrinkles and sagging. Hair grays due to reduced melanin production in hair follicles, and hair thinning or loss may occur. These changes are visible signs of aging and vary from person to person depending on genetics and environmental factors.

I wish You
Success
in your Exams

And as you prepare for this important moment, remember:

- *You are capable of achieving great things.*
- *Hard work and dedication always pay off.*
- *Believe in yourself, and trust your preparation.*

May your efforts bear fruit and your results reflect your true potential

Good luck, and may success be yours
