

Description of Module	
	FUNCTIONS OF LIBRARY CATALOGUE
Module Name/Title	Library catalogue
Pre-requisites	
Objectives	The objectives of the module are as follows: (i) To define the library catalogue. (ii) To discuss the functions of library catalogue. (iii) To discuss the need and purpose of library catalogue with special reference to the five laws of library science. (iv) To discuss the importance of library catalogue. (v) To distinguish between library catalogue and its adjuncts.
Keywords	Catalogue, Accession Register, Index, Bibliography.

Structure of Module: E-Text

1. Introduction
2. Definition
3. Functions
4. Importance
5. Adjuncts to library catalogue
6. Questions
7. Further Readings

1. Introduction

If the library is considered as a heart of the institution, the catalogue becomes the heart of the library. With the ever increasing collection of library, the catalogue becomes an essential and important tool to locate the desired material from the ocean of books. It is the key to the holdings of any library which interprets the documents to the users. It informs the users what type and kind of documents are available and where they are located.

2. Definition

The term catalogue originates from the two Greek phrases Kata + Logos. Kata means according to and logos means order. So the literal meaning of catalogue is arrangement of reading material in a reasonable means in a particular order.

The various authorities of library science have defined the term catalogue at various time in their own fashion. The first systematic definition is given by C.A. Cutter in his famous book 'Rules for Dictionary Catalogue' in 1876. According to him 'Catalogue is a list of books which is arranged on some definite plan. As distinguished from a bibliography, it is a list of books in some library or collection'. As in 19th century the measure part of the collection of library was books, Cutter has used the term book. In the second part of his definition he has distinguished the catalogue from bibliography, as bibliography is also a list of book on some topic, author or subject of particular library or group of libraries.

According to J.D. Brown 'Catalogue is an explanatory logically arranged inventory and key to the books and their contents and it is confined to the books

in a particular library'. According to him catalogue is always a logically arranged and it is not only confined to the books but also includes their contents.

H.A. Sharp in his book 'Catalogue: A text book for use in libraries' has defined the catalogue as a 'list to books and other reading material in the holding of a library or a group of libraries. The list contains entries of books, arranged according to some definite plan'. the use of the term group of libraries creates confusion as the catalogue of group of libraries is known as union catalogue and not a catalogue.

S.R. Ranganathan has defined catalogue in his book Library catalogue: Fundamental and Procedure in 1938 as 'It is a tool which gives information about the contents of the library. It is divided into 2 parts – in subject and by author. It gives information about the arrangement and order in which they are lying in the shelves. It helps the reader to find out his or her desired book without any loss of time. It saves the time of the reader'. Ranganathan's definition is based on five laws of library science and it includes all the functions of library catalogue.

The most systematic definition is given by Oxford English Dictionary – 'now usually distinguished from a mere list or enumerations, by systematic or methodical arrangement, alphabetical or other order, and often by the addition of brief particulars, descriptive or aiding identification, indicative of locality, position, date, price or the like'. This definition emphasizes on descriptive catalogue, while in open access library there is no need of description about the collation and imprint.

To summarize, we can say that a library catalogue is a systematically arranged list of books, periodicals, manuscripts, maps, films, audio records and other graphic material. It contains the whole bibliographical information of a document viz author, title, publisher, edition etc. It is limited to a particular library.

3. Functions

The main function of library catalogue is to help the exploitation of resources of the library. Cutter has discussed the functions of library catalogue as:

1. To enable a person to find a book of which either the
(a) Author (b) Title, or (c) Subject is known
2. To show what the library has
(d) By a given author (e) On a given subject and (f) In a given kind of literature: and
3. To assist in the choice of book as to its
(g) Edition, and (h) Character

According to Margaret Mann ‘the purpose of cataloguing is to put order into a collection of books so that volumes may be located and used for reference and circulation.

Ranganathan has defined the functions of library catalogue in confirmation with the laws of library science. The first law demands that any book in the stock of library must be made available to a reader as and when asked for. According to him many books are of composite nature. Neither the title nor the main entry may disclose the contents. The Second law of library science – every reader his/her book demands that hidden contents should be brought to the notice of the readers by preparing subject analytical entries. So also with the Third Law every book its reader demands subject analytical. The Fourth law – save the time of the reader as well as of the staff not only demands subject analytical but also a bipartite catalogue: alphabetical and classified parts so that the desired book is made available to the reader in minimum possible time. The Fifth law - library is a growing organism warrants adoption of a published catalogue code for consistency and choice of the physical form of catalogue. According to Ranganathan catalogue is a ‘tool for the fulfillment of the laws of library science. He has summarize the functions of library catalogue as:

- (a) To disclose every reader his or her documents
- (b) To secure for every document its reader
- (c) To save the time of the reader, and for this purpose
- (d) To save the time of the staff

In general the library catalogue is expected to answer the following queries of the readers:

- (a) Is a particular book is in the library?
- (b) Which books by a particular author are in the library collection?

- (c) Is there a book in the library with such and such title?
- (d) Is there a book in the library with such and such collaborator i.e. editor, translator, reviser, compiler, illustrator etc.
- (e) Which are the books in the library with such and such series.
- (f) The books on a given subject.
- (g) To provide bibliographical information of a particular book i.e. author, title, series, edition, publisher, year of publication etc.

4. Importance

Seeing the above functions performed by a library catalogue, we can say that it is an essential tool for locating the books from the library collection. Without a catalogue, a library is regarded as human being without eyes and a house without windows.

4.1 Importance of Library Catalogue in Open Access System

In olden times Close Access System was in vogue due to rarity of reading material. As reader were not allowed to search the books personally, library catalogue was the only tool, through which they were able to search it. In modern times all the libraries provide open access facility and readers are allowed to locate their required reading material without hindrance. They are tempted to go to the shelves directly and not to use catalogue. Hence there is a group of librarians and user, who are of the opinion that in open access system, the library catalogue has lost its importance. This is a wrong conception. In open access, library catalogue is more required as compared in close access. Due to open access facility, most of the popular books will be out of the stack room and issued to readers. In the absence of library catalogue, readers will not be able to know whether particular book is in library holdings or not and they will be disappointed. If there is a library catalogue they will be ascertained that the book is in library, it means it is issued to some other reader. Hence he can reserve the book at the circulation counter and as and when the desired book is returned, he will be informed accordingly and he will be able to have his required book.

4.2 Importance of library catalogue if the reading material is arranged in a classified order.

Again it is misconception that if the books are arranged on shelves in stack room and properly guided, reader can find his desired book easily approaching

through subject. According to Sharp catalogue is complement of classification. Classification serves only one approach that too is incomplete in case of multifocal books (dealing more than one subject). Library catalogue serves various lines of approaches i.e. author, collaborator, title, series etc. Hence even in classified library, catalogue is a valuable tool.

4.3 Indispensible tool for other sections of the library

Library catalogue is a indispensable tool for providing reference service, book selection, classification, cataloguing and circulation activities of the library. It is like a pivot around which all the activities of library rotates.

Realizing the importance of catalogue, Edward Edwards, has remarked in 1859 in his book *Memoirs of Libraries* that ‘there is no matter connected with the administration of a public library which can vie, in point of importance, with the character and the conditions of its catalogue. However liberal its accessibility, however able its chief, however numerous and well trained its staff, however large and well selected its stock of books, it will fall lamentably short of true standard of a good library if its catalogue be not (i) well constructed, (ii) well kept up with the growth of the collection and (iii) thoroughly at the command of its frequenter’.

On December the 31st, 1865, a user of the library of the American Geographical Society wrote to the president of the society thus ‘open the New Year by making a catalogue of your library. A library without a catalogue is very much in the condition of a man without a name, a gentleman without a card or an individual without a post office address. Reform this’. Just as the starry heaven reveals the glory of the God, the catalogue reveals the glory of the librarian.

5. Adjuncts to Library Catalogue

Adjuncts means similar or identical things. In the context of cataloguing, those records and tools are known as adjuncts of library catalogue which may be consulted or used to supplement the information provided by catalogue. In library Accession register, Shelf list, Index, Bibliography etc are treated as adjuncts to library catalogue. To some extent they are identical or similar tools

to library catalogue, but their functions are quite different as that of library catalogue.

5.1 Library Catalogue Vs Accession Register

Accession register is a record of the volumes added to a library in the order in which they are received. Some of the columns of accession register are date, accession number, author, title, publisher, year of publication, pages, source, price, cost, volume, call number, withdrawal number, remarks etc. Some of the important functions of the accession register are:

- (i) To furnish complete record on each item added to the library collection which can be consulted when the item itself is not available.
- (ii) To maintain a chronological record of the libraries growth.
- (iii) To provide a direct method for tabulating growth, statistics, drafting annual report etc.
- (iv) Useful for inventory, audit, insurance etc.
- (v) Distinguishes several copies of the book.
- (vi) Gives find information about the book, whether it is in library or withdrawn.

Seeing the functions performed by Accession register, we can say that it is merely a stock register and it is a list of books chronologically received in the library, while a library catalogue helps in locating the book, serves many approaches through which a book can be traced i.e. author, title, collaborator, subject, series etc.

5.2 Library Catalogue Vs Shelf List

Shelf list is a 'record of the books in a library arranged in the order in which they stand on the shelves'. Each title is represented by a card giving the author, title, edition, number of volumes (if any), number of copies (if more than one), call number and such other items as the library deems necessary. The call number arranges the cards in the shelf list in the same way as it arranges the books on the shelves.

In the beginning, the catalogues were compiled with the inventory purpose. But now this function is shifted to shelf list and catalogue is left free to develop on its all possible approaches. However shelf list serves the purpose of classified catalogue (can reveal the total books on the specific subject), if fails to give

information as other approaches are concerned. While catalogue is used by the readers, staff list is used only by the library staff.

5.3 Catalogue Vs Index

Both are treated as synonymous, but both perform different functions. While catalogue discloses whole collection of a library or a particular book, whereas an index reveals exact place of information he requires. The list of books by different authors is a catalogue, but the list of reference to individual subject in a book in an index. According to E.J. Coates' generally accepted difference between a catalogue entry and index entry is that the former includes some descriptive specification of a document containing a subject, whereas an index entry merely locates the subject.

5.4 Catalogue Vs Bibliography

A bibliography is also a list of books, manuscripts, articles, illustrations etc with required bibliographical details, compiled on lines similar to a catalogue and is limited in its scope to either an author, or a particular subject, but is not confined to a particular collection. Its main purpose is usually to bring to the notice of readers an exhaustive or select list of documents relevant to the pursuit of his enquiry or study. They are used for book selection, reference service, inter library loan etc. But they do not give the exact location in the library. Though both catalogue and bibliography are basically lists and their entries are arranged in definite order but the scope of catalogue is limited to a particular collection. Bibliography serves as adjunct to catalogue by providing additional information about a book. As such catalogue and bibliography are not identical though the distinction between the two is very narrow.

LESSON 2: HISTORY OF CATALOGUING

1. Introduction
2. Definition
3. Development of catalogue codes
 - 3.1 British Museum Code (1841)
 - 3.2 Charles C. Jewett Code (1852)
 - 3.3 Rules for Dictionary Catalogue (1876)
 - 3.4 The Prussian Instructions (1899)
 - 3.5 Dzializka Code (1886)
 - 3.6 Anglo-American Code (1908)

 - 3.11 AACR-2 (1978)
 - 3.12 AACR-2R (1988)
 - 3.13 RDA (2003)
3. Questions
4. Further Readings

1. Introduction

A catalogue must function properly and grow with the collection of a library. The entries, description, arrangement and style must be uniform. Till about the middle of the 19th century, the catalogues of libraries were based on a set of rules drafted by an individual cataloguer in a casual way on the basis of long tradition and practice prevailing in the library. Hence there was no uniformity in the catalogues of different libraries.

2. Definition

The catalogue code means a set of rules with defined terminology designed for cataloguing purposes and rules means single provision to carry out

cataloguing work. The catalogue codes and rules guide the cataloguer as to how the entries for books are to be prepared so that one and same system and pattern might exist for ever who so ever has done it. Cataloguing should not depend on the flair and fad of an individual. According to Dr. S.R. Ranganathan, "Library catalogue is an ancient library tool. But catalogue code of a rigorous kind is of recent origin. It first attained rigour in stray local codes i.e. in individual libraries. Now it is attaining regour in national codes. An international code is yet to be established".

3. Development of Catalogue Codes

After the beginning of the 17th century, Sir Thomas Bodley evolved a catalogue code for the Oxford University Library. He included, along other regulations, classified arrangement with an alphabetical author index arranged by surname. He advocated the entry of noblemen under their family names. However the idea of entry under the surname was first developed by a British Bookseller Andrew Maunsell in 1595.

In 1697, Federic Rostgaard published in Paris his „Discourse on a new method for setting up a library catalogue“. Its second edition was published in 1698. He provided for a subject arrangement subdivided at once chronologically and by size of volume. Directions are given for an alphabetical index of subject and authors at the end of the catalogue. Authors are to be entered by surname. Works bound together are to have separate entries. Author's names are to be supplied for anonymous works when known.

First time in France the use of card was made for cataloguer in 1775 by Rosier for preparing the catalogue of Paris Academy of Science. In 1791, in France, first time, a national code was evolved and instructions were issued to follow it. Libraries were also asked to use the card catalogue. Title page was to be transcribed on the card and the author's surname underlined for the filling word. If there was no author, the keyword in the title was to be underlined. A collation was added which was to include the number of volumes, size, a statement of illustrations, the material of which the book was made, the kind or type, and missing pages and a description of the binding if it was outstanding in any way.

The important modern catalogue codes are described as follows:-

3.1 British Museum Code (1841)

Rules for Compiling the Catalogue of Printed Books, Maps and Music in British Museum. London, British Museum, Revised edition 1936 reprinted in 1948 and 1951.

The earliest code of cataloguing which has exerted considerable influence over the subsequent codes is Panizzi's 91 rules printed as prefatory matter in the British Museum Catalogue of 1841. Sir Anthony Panizzi (1797-1879) with his two associates- J Winter Jones and Edward Edwards formulated the first version of famous 91 rules in 1837, was accepted in 1839 and was published in 1841. These rules are for the entry of authors only.

Its importance lies not only in the fact of its continuing applications to the catalogue of a great national library, but also in its primacy i.e. it was the founding code, being the first systematic code of rules. It laid down the foundation for further codes which covered rules for author and title entries.

The trustees of the British Museum, finally approved the adoption of Panizzi's code of rules for cataloguing and even today, it forms the basis on which the British Museum catalogue is being complied. Till 1887, the original 91 rules were faithfully adopted in the cataloguing processes of the British Museum. The latest 1936 edition contains only 41 rules.

The objectives implicit in British Museum rules for entry are two. The first objective is to enable the user of the catalogue to determine readily whether or not the library has the book he wants. The catalogue is constantly searched by many readers and members of the staff, and the quicker this information can be found the better is catalogue. The second objective is to reveal to the user of the catalogue, under one form of the author's name, what works the library has by a given author and what editions or translations of a given work. Esdaile says „Panizzi's rules were the first thorough code ever drawn up“.

3.2 Charles C. Jewett Code (1852)

At about 1850, the American libraries seriously considered the need to bring out a code of cataloguing rules. Jewett, Librarian of the Smithsonian Institute prepared a code of 39 rules in 1852. These rules were modeled after Panizzi's rules and issued under the title „Smithsonian Report on the construction of catalogues of libraries and their publications by means of separate stereotyped titles, with rules and examples“. These rules were again limited to the author entries, but included a model subject index. Pette names Jewett not Cutter as Father of Modern Library Methods.

3.3 Cutter's Rules (1876)

1876 is an epoch-making year in the history of cataloguing, for in this year was published Charles Ammi Cutter's Rules for a Dictionary Catalogue (RDC) containing 205 rules. The latest 4th edition was published in 1904 from Washington. This edition contains 369 rules. For the Dictionary catalogue it is still the standard code of rules, and there is every reason to suppose that it will remain so. Henry A. Sharp has evaluated this code as „the first code of complete cataloguing practice for every kind of entry in a dictionary catalogue“.

Cutter's code of rules not only provides rules for subject entry and the arrangement of entries, but also indicates methods that may be adopted for brief, moderately full and very full cataloguing. As such, it is suited to the needs of all types of libraries. Dorothy M. Norris remarks that Cutter's rules „are a sound exposition of the fundamentals of cataloguing and should be studied by all would be cataloguers“.

Cutter strengthened the concept that catalogues not only should point the ways to an individual publication, but should also assemble and organize literary units. Dr. S R Ranganathan has remarked him as genius and his work RDC as classic and immortal.

Other features of the code include, rules for corporate authorship more developed and numerous than British Museum with valuable discussions on the difficulties, entry under name of the institution, but government organizations under place name, division of corporate authorship in 4 types, „double entry recommended quite often when no alternative is completely acceptable. A list of

objectives is given at the beginning of the code, followed by comprehensive list of definitions. Rules for cataloguing special materials (Manuscripts, maps etc) by other compilers are included at the end of the work.

3.4 The Prussian Instructions-PIN Code (1899)

The Prussian Instructions: Rules for the alphabetical catalogues of the Prussian libraries translated from the second edition by Andrew Osborn (1938).

A significant contribution to cataloguing rules, after Cutter is found in Prussian Instructions. PIN may be taken to be the second important code of a non local nature. It was designed originally for compiling a union catalogue of the then German State Libraries. Although not very influential in English speaking countries, PIN did influence cataloguing in Halland, Sweden, Norway, Denmark, Hungary, Switzerland etc.

The Basic PIN like British Museum code has fairly short entries and a few added references are used for alternative approaches to some documents. In addition, PIN is one of the few codes to include specific instructions for various degrees of limited cataloguing. Filing instructions are also included.

The most outstanding feature of PIN is that it does not recognize the concept of corporate authorship. They are treated either as of personal authorship or anonymous works.

Dr. Osborn makes 3 criticisms of PIN in the introduction of his translation:

- (a) Rules are too complicated.
- (b) Too few references are allowed.
- (c) Too many titles do not lend themselves readily to the prescribed formulas.

3.5 Dziatzka Code (1886)

In 1886, Prof. K. Dziatzka, a German librarian published his code which was translated into English by an American librarian K.A. Linderfelt and published in 1890. Special features of the code are:-

- (a) It does not accept the principle of corporate authorship, entry being made under title, and
- (b) The grammatical arrangement of title entries is preferred, as compared to Anglo-American practice of natural word order.

Andrew Osborn has praised the code due to 3 reasons:

- (a) It is not a theoretical utterance but consists of carefully throughout rules, based on practical experience.
- (b) Wording throughout is clear, and all terms have been defined.
- (c) The grasp of essentials displayed by its framers is truly noteworthy.

3.6 Anglo-American Code (1908)

Cataloguing rules: Author and title entries, Compiled by Committees of the Library Association and the ALA. Published as American Edition and British Edition.

The American Library Association (1876) and Library Association (1877) issued independent set of rules in 1878 and 1883 respectively. Both decided to issue a combined code to secure greater uniformity in cataloguing between English speaking areas. It was issued in 1908. L.S. Jast and Henry Guppy, the two eminent British librarians, and Melvil Dewey representing the American libraries, played a significant role in producing the joint code.

The 174 rules relate to the entry, heading and descriptive cataloguing of works for an author and title catalogue guided chiefly by the requirements of larger libraries of a scholarly character. The preface acknowledges and the notes throughout the text indicate the influence of Cutter, PIN, British Museum Code and L.C. rules.

AA Code gives more importance to corporate author and commits first time the blunder of the distinguishing institution from society. Its importance lies in the fact of its being the first international cataloguing code, in the extent of its rapid and wide-spread adoption and use by all kinds of and size of libraries in the two countries since its introduction, and in its continued use in Britain. Its definitions are more acceptable than that of RDC.

AA Code was criticized as being too elaborate for application to small libraries and for its omission to provide rules for subject entries. There are no rules for alphabetization. The rules for maps and atlases are inadequate. No rules have been provided in the section on government publications for reports by committees, royal commissions etc., or for government institutions such as science museum. Again, there is no rule for change of name of corporate authors. The examples are one of weakest elements of code. Many are in German or Latin.

By the 1920's AA Code was under criticism and the need for revision was repeatedly expressed. Some called for simplification, saying the rules were too fussy, others wanted more details. Those who wanted details won. In 1930's Committee of ALA and LA began revision. The LA dropped out at the outbreak of war. The ALA continued alone, producing a draft code in 1941. The final version appeared in 1949, covering author and title headings, the rules for description being separately published by Library of Congress as Rules for Descriptive Cataloguing.

3.7 Vatican Code (1931)

„Vatican Library: Rules for the Catalogue of Printed Books“ Published in Italian in 1931, 2nd edition 1939. Translated from the 2nd Italian edition. Edited by Wyllis E. Wright. Chicago, ALA, 1948.

The papal (related to Pope or Catholic Church) collections at the Vatican among the riches in Europe, had a catalogue which was more of an inventory type. In 1927, the Vatican Library was offered aid by the Carnegie Endowment for International Peace to compile a new catalogue for its collection and a team of American Librarians consisting J.C.M Hanson and W.W. Bishop compiled a catalogue.

As the dictionary form of catalogue was decided upon, Cutter's rules provided a basis, for this was the only code to contain rules on the choice of subject headings for dictionary catalogue. The existing Italian rules for the compilation of the alphabetical catalogue 1911 and the ALA rules were taken in evolving the Vatican rules. It is one of the few modern codes to cover the whole

field of cataloguing author entry, the description of the book, subject entry and filling. There are several useful appendices including some excellent sample cards, rules for cataloguing 15th and 16th century books and a glossary of library terms in Italian, English, French, German, Spanish languages. The code is still used in Vatican Library.

3.8 ALA Rules (1949)

ALA Cataloguing Rules for Author and Title Entries. Chicago, ALA, 1949. Rules for Descriptive Cataloguing in the Library of Congress. Washington, Government Printing Office, 1949.

Between 1936 and 1939 both Library Associations (LA & ALA) cooperated in preparation for a new joint code, as AA Code was not fulfilling the requirements. But due to outbreak of war, British participation was discontinued. The ALA proceeded independently and produced their preliminary second edition of the code in 1941 in two parts: Part 1 Entry and Headings and Part 2 Descriptions of books, in which 174 rules of the AA Code had grown to 375. The 1941 version was widely criticized by A.D. Osborn in his article „The Crisis in Cataloguing“, charging it too legalistic. The reasons for making the rules were ignored at the expense of detail and principles were obscured completely. Many librarians also started thinking in this direction. In spite of this, 2nd edition came out in 1949. Descriptive part was dropped and it was issued by Library of Congress in 1949. This carries all the mistakes that are already criticized. It is also too elaborate and also not suitable for small libraries. J.H. Shera has criticized saying that „the 40 some pages in 1908 has blossomed into over 200 in 1949, an increase in bulk of some 500%, while the 15 or more pages of descriptive cataloguing in 1908 were now 100. To the cry of greater simplification, he proclaimed the answer of the profession has been to expand the code from a total of 88 pages in 1908 to a total of 406 pages in 1949.

The gist of the outstanding criticism of Semour Lubetzky would be worth mentioning here, which he expressed in his library world-shaking booklet entitled “Cataloguing Rules and Principles” published in 1953. His criticism against the codification of cataloguing rules that they were full of complexities, redundancy, inconsistency and unnecessary elaboration, was widely welcomed.

Lubetzky indicated a way of establishment of simple and workable code based on well defined principles recognizing more generalized conditions. The review of his logical genesis of the ALA rules for corporate entry right from Panizzi and Cutter to the present reveals the basic problems relating to the entry under name or place as well as distinctive and common names. Lubetzky's recommendations and solutions to the problems are unique and important from practical point of view.

A Committee was formed and Lubetzky was appointed as chairman in 1956 and he published first draft in 1960, under the title „Code of Cataloguing Rules: Author and Title Entry“.

3.9 Classified Catalogue Code (CCC) Ed 5 (1964)

The Classified Catalogue Code first published in 1934 is a unique contribution of Dr. S.R. Ranganathan from India which can be claimed as universal code. It is the first code complete in every respect for a classified catalogue. The subject approach has been recognized as the dominant one in CCC. The arrangement of cards in the catalogue trays follow the order of the classification scheme. It also provides facility for preparing another part i.e. alphabetical part. This part contains alphabetical arrangement by authors, collaborators, series, editor of series and titles. It gives rules for Main Entry, Class Index Entries, Book Index Entries, Cross Reference Index Entries, for single volume, multi volume, composite books, periodicals, national bibliographies, union catalogue of books and periodicals, indexing and abstracting periodicals. The foundation of the code is based on the normative principles and the Canons of Cataloguing which Ranganathan evolved in his “Theory of Library Catalogue” in 1938. B S Kesavan remarks that “Ranganathan's classified code is the logical consequence of a mental approach deeply evolved in classification research, Ranganathan, in his code sought to remove the restriction of local usages by the concepts of the language of the library and the scale of language in which the language of the library comes first and the others come in their descending sequence of favouredness.

Some amendments and additions made in CCC after 1964 are published as Part N in Cataloguing Practice published in 1974 and will be incorporated in Ed.

6 of CCC. The only lacuna in his code is that it does not cover the category of non-book material.

3.10 AACR-1 (1967)

Anglo-American Cataloguing Rules (North American Text), Chicago, ALA, 1967. (British Text). London, Library Association, 1967. It was prepared by the ALA, The Library of Congress, The Library Association (London) & The Canadian Library Association. It was edited by Semour Lubetzky from 1956-62, but later on due to difference of opinion on rules for institution, he resigned and Mr. C Sumner Spalding completed the work in 1962-65. AACR-1 in real sense represents the result of 35 years of activity in the codification of cataloguing rules for British and American libraries. British text is having 216 rules while American text 226 rules. It can be called as multi-national code.

AACR-1 is based on the „Statement of Principles“ adopted by the ICCP in 1961 with certain significant departures. Earlier codes emphasized specific rules for various types of publications and various classes of persons and corporate bodies. The present rules are based on a set of principles, followed as consistently as possible allowing for the necessity of reaching common agreement.

AACR-1 includes rules for author/title main entry headings, added entry headings and references, uniform titles for both title and author entry, description, and all these in relation to any forms, including three dimensional ones. Though it is meant completely for alphabetical catalogue, but it can still be applied without modifications to author/title elements of classified catalogue. It is written primarily for large research libraries, but can easily be used by all other types of libraries.

According to Tail and Anderson AACR-1 is a complete code in the sense that it covered both choice and form of entry word and description of the material. It also goes further than previous codes in including rules for a large number of non-book materials likely to be found in a large library – manuscripts, maps, films, prints, records etc. The rules for choice of entry are almost always kept quite distinct from those form of headings, which in turn are

clearly distinct from those of description. The form of those examples given with the rules are considerable improved. F. Bernice Field reviewed the AACR-1 (American Text) as “AACR will make catalogues easier to understand, to explain, and to use them at present. The cataloguing process will be more reasonable because the rules are based on principles that are clearly explained instead of precedents”.

3.11 AACR-2 (1978)

It is prepared by ALA, The British Library, the Canadian Committee on Cataloguing, The Library Association, and the Library of Congress and is edited by Michael Gorman and Paul W. Winkler.

The increasing mechanization in cataloguing, the growth of centralized and cooperative bibliographic services and networks, introduction of a number of new media, all these have necessitated a revised code of AACR. The objectives of AACR-2 are as follows:-

- (a) To reconcile in a single text the North American and British texts of 1967.
- (b) To incorporate in the single text all amendments and changes already agreed and implemented under the previous mechanisms.
- (c) To consider for inclusion in AACR all proposals for amendment currently under discussion between the ALA, the Library Association; any new proposals put forward by these bodies and the British Library; and proposals of national committees of other countries in which AACR is in use.
- (d) To provide for international interest in AACR by facilitating its use in countries other than the United States, Canada and the United Kingdom.

Some of the important features of AACR-2 are:-

- (a) Abandonment of entry under the name of a place of certain institutional bodies.
- (b) Substitution of uniform titles for form headings.
- (c) Title headings for marks produced under editorial direction.
- (d) Provision of standardized framework for the systematic description of all library materials for machine processing. It is based on ISBD's. Hence AACR-2 is an attempt towards international catalogue code.

- (e) It has extended its coverage to new categories of library materials AACR-1 was generally inadequate in its coverage of audiovisual materials. AACR-2 is an improvements over AACR-1.
- (f) Provision of 3 level of description makes it useful for all types of libraries.

3.12 AACR-2R (1988 revision and 2002 revision)

Over the years, AACR-2 has been updated by occasional amendments, and was significantly revised in 1988 and 2002. These revised editions are known as AACR-2R (2nd edition, 1988 revision and 2nd edition, 2002 revision) respectively. The 2002 revision included substantial changes to sections for non-book materials. Annual updates began in 2003 and ceased with 2005.

3.13 RDA (2003)

AACR-2R has been succeeded by Resource Description & Access (RDA) which is developed by the Joint Steering Committee for Development of RDA with representatives from the American Library Association, Australian Committee on Cataloguing, British Library, Canadian Committee on Cataloguing, CILIP and Library of Congress. It is the new cataloguing standard that will replace AACR-2R. It provides guidelines on cataloguing digital resources and a stronger emphasis on helping users to find, identify, select and obtain the information they want. It is a flexible and suitable framework for use in a digital environment. RDA has been dealt in detail in Module 33.

LESSON 3: NORMATIVE PRINCIPLES, LAWS, CANONS AND PRINCIPLES

1. Introduction
2. Historical development of Normative Principles
3. Need and importance of Canons of cataloging
4. Canons of cataloging
 - 4.1 Canon of Ascertainability
 - 4.2 Canon of Prepotence
 - 4.3 Canon of Individualization
 - 4.4 Canon of Sought Heading
 - 4.5 Canon of Context
 - 4.6 Canon of Permanence
 - 4.7 Canon of Currency
 - 4.8 Canon of Consistence
5. Questions
6. Further Readings

1. Introduction

In the context of cataloguing normative principles are those rules, laws, canons and principles which govern the preparation of catalogue codes and various types of entries, choice of headings, rendering of headings, description and other things related with the cataloguing of documents. Dr. S.R. Ranganathan is the first person to whom the credit goes for enunciating,

propounding, discussing and analyzing normative principles of cataloguing. In the words of Ranganathan „The first application of scientific method to cataloguing and catalogue code was made in 1934. Between 1934 and 1938, some rules of Classified Catalogue Code came up for critical examination from time to time, both in classroom discussion and in staff meetings to consider problem books in cataloguing. On the anvil of such critical discussions, certain normative principles of cataloguing took shape. These were different from Five Laws of Library Science. Indeed, they were all implications of these Laws“. These special normative principles were called as Canons of Cataloguing.

S.R. Ranganathan has used 3 terms to denote his normative principles viz: Law, Canon and Principle.

Law is the correct statement and is used in major disciplines such as Laws of Library Science, Newton's Law etc. Law tells us what we have to do and what not to do.

Canon means a general principle or standard by which judgements may be formed. It also means a body of writings which are accepted as genuine. Ranganathan has used the term in the context of divisions of first order of the major discipline such as cataloguing, classification, book selection etc.

Principle is a rule regulating the procedure or method necessary to be observed in the pursuit or study of some art or science. Ranganathan has used this term in the context of divisions of the second or later order of the major disciplines such as Principle of Facet Sequence in Classification and Principle of Alphabetization in Cataloguing.

2. Historical Development of Normative Principles

All the normative principles of cataloguing were not developed in one stretch, they were developed in different stages as detailed below:

2.1 Formulation 1

Though Classified Catalogue Code came out in 1934, but the normative principles of cataloguing first time were included in Theory of Library Catalogue published in 1938. There were following six canons:

1. Canon of Consistency
2. Canon of Relevance
3. Canon of Ascertainability
4. Canon of Permanence
5. Canon of Currency; and
6. Canon of Prepotence

In addition to these canons, the general Law of Parsimony was also mentioned as guiding principle.

2.2 Formulation 2

The second formation of Canons of Cataloguing was made in Ranganathan's Heading and Canon published in 1955 prepared in connection with the IFLA conference in the same year. In this book some canons were

further added to and elaborated and the number of canons were extended to eight by the addition of the following two:

7. Canon of Context
8. Canon of Purity

The Canon of Relevance of the Theory (1938) was renamed as Canon of Sought Heading in „Heading and Canons“ (1955). The Canon of Individualization was incorporated in Edition 4 of Classified Catalogue Code in 1958.

2.3 Formulation 3

The near-latest formulation of canons for cataloguing is given in the Classified Catalogue Code, Ed 5(1964). It has omitted the Canon of Purity and added the Canon of Individualization. This edition also mentions the following General Laws applicable to cataloguing:

1. Laws of Interpretation
2. Law of Impartiality
3. Law of Symmetry
4. Law of Parsimony
5. Principle of Local Variation and
6. Principle of Osmosis

2.4 Formulation 4

The latest formulation of Canon is in December, 1969 issue of Library Science with a Slant to Documentation. In it the following canon and principles were added:

1. Canon of Recall Value
2. Principle of Unity of Idea
3. Principle of Probability

So at present there are in all 9 Canons, 5 laws of Library Science, 4 Basic Laws and 4 Principles.

3. Need and Importance of Canons of Cataloguing

Library cataloguing is the important tool to exploit the use of reading material of the library. It should satisfy all the sought approaches of the readers. Hence there should be some principles to lead a cataloguer in the right direction. These principles lead him for consistency, accuracy and uniformity in all type of libraries in different times.

Today cataloguing work is becoming difficult day by day due to enormous and constant increase in library output. The title pages of all the books are not standard (uniform). Many books are elusive (difficult to understand) and many subjects baffling (puzzling). While a title page reveals a new edition, actually it is a reprint. Sometime title page does not reveal the real subject of the book.

As the light house guide the ships in the night on the sea, these canons and principles guide the cataloguers in their day to day work of cataloguing to

achieve uniformity, consistency and accuracy. These canons are implications of the laws of library science, but are applicable to the field of cataloguing only. In case a canon fails to give a solution to a problem or there is conflict between canons, then an appeal to the laws of library science helps in the solution. Canons of cataloguing are the specific normative principles applicable to cataloguing, that is:

1. Drafting of a catalogue code including the formulation of each rule.
2. Interpretation of the rules to meet new situations brought out by a particular document or by changes in the practice of book production.
3. Provision of suitable guidance for day to day cataloguing work.
4. To make critical study of any catalogue code.

In this way these canons throw light, in which catalogue code should be written as well as interpreted while applying. These have provided a scientific basis to the field of cataloguing.

Prof. Ganesh Bhattacharya highlighting the potentiality of the normative principles remarked that „this set of normative principles of cataloguing is one of the outstanding contributions of India in the field of cataloguing. The potentiality and the versatility of these principles have not yet been fully realized by the library profession at large. Probably when first enunciated, these normative principles were ahead of time. However, their helpfulness and importance will be realized in due course. Those who have experience cataloguing as a discipline find them as the set of normative principles available for the discipline today“.

4. Canons of Cataloguing

Out of the 9 canons of cataloguing, first 8 canons are discoursed below. The latest 9th Canon-Canon of Recall value has been discussed in Module 4:

4.1 Canon of Ascertainability

Ascertainability means which is traceable. According to Ranganathan, the information provided in the entries of catalogue must be ascertainable and not imaginary. This canon prescribes the use of the title page and overflow pages as the main source of cataloguing information for the choice and rendering of the Heading of main entry and specific added entries. However the exception may be:

- (a) The extract note, extraction note and related book note of the main entry.
- (b) The leading section and directing section of Cross Reference Entry.
- (c) The heading derived from the extract note, extraction note and related book note of a Book Index Entry.
- (d) The heading and the directing section of Class Index Entry.

It means the information of the above sections can be taken from outside sources.

The following are the additional sources of information to the title page:

- (a) Half title page for series and editor of series.
- (b) Generic content page for ordinary composite book.

(c) Title page of constituent work for artificial composite book.

4.1.1 Purpose

Many codes suggest the cataloguers to search the information to be given in cataloguing entries outside the title page which creates inconsistency, and is the wastage of the time. If the Canon of Ascertainability is followed, there would be little need of making search to obtain biographical and bibliographical information from outside sources. According to Ranganathan it is the duty of publishers to give all needed information on the title page and back of title page i.e. year of birth and death, entry element, real name (in case of pseudonym), call number etc. This canon would be better satisfied if an international standards for the title page and its overflow pages is adopted.

4.1.2 Implications

Classified Catalogue Code (CCC) fully regards the Canon of Ascertainability. All the rules make provision to prepare the entry under the heading available on the title page. Chapter MD of CCC prescribes rules for the choice of heading. For example in case of pseudonym author if the title page gives the pseudonym author, entry is made under pseudonym and if real name is also given in subordinated manner, it is also given in the heading section. However if the real name is given in prominent form and pseudonym is given in subordinate manner, it is rendered under the real name and pseudonym is given

in brackets in subordinate manner. This canon is violated in CCC in case of absence of series number. In this situation, CCC allows the use of year of publication or even in the absence of year of publication, the use of serial number 1,2,3 etc as the case may be. However Ranganathan calls it as purposeful violation of the canon.

AACR-2R also accepts this canon to a great extent. Prescription of Rule No. 1.0A Sources of Information and Rule No. 2.0B1 Chief Source of Information etc follow it. However this canon is violated by some rules of AACR-2R i.e. 21.1A2 Probable author, 21.4A Use of outside sources named or not, 22.2A Predominate name, 22.2C Change of name choose the latest name etc are some of the example of violation of this canon.

4.2 Canon of Prepotence

The potency to decide the position of an entry among the various entries in a catalogue should if possible, be concentrated totally in the leading section, and even there, it should be concentrated, as much as possible, in the entry element. If total concentration in the leading section is not possible, the minimum possible potency should be allowed to over flow beyond it, to later sections, and even this should be distributed in the decreasing order of intensity.

Earlier while writing a letter the potency was given to city. It was written in capitals. It was underlined, someone wrote it in English and Hindi. Now potency is given in Pin Code.

4.2.1 Purpose

Ranganathan has pointed out „the essence of a library catalogue is arrangement of entries. The entries get sorted letter by letter and digit by digit. The potency goes on decreasing rightwards and downwards, from the first letter or digit in most of the scripts. Any mistake in the first letter or the digit will therefore be fatal. The entry will virtually lost in far of region of the catalogue. Hence the purpose of this canon is to place the entry under the most potent part of the bibliographical information considering the purpose of the entry. Every possible care should be taken in recording correctly the most potent part of the entry and the later parts.

4.2.2 Implications

Main entry

In CCC it is fully respected. Main entry of CCC is fully potent. Every work of every author gets individual number and there is no need of seeing other sections of the main entry, while in AACR-2R the main entry is author entry. However much the name of the author may be individualized by giving the full names, year of birth and death, it may not individualize the document described in the entry. Author might have written two or more documents. In this way potency is not concentrated in leading section. A part is necessarily overflows into the title section. More over while in CCC entry element is given in capitals

and forename in brackets, in AACR it is given in running hand, CCC gives potency and it is according to principle of sweep of the eye.

Cross Reference Entry

In Cross Reference Entry, the leading section has only a little potency. A good deal of potency necessarily flows into the third section which gives the locus and in this way violets the canon.

Subject analytical in dictionary catalogue also do not respect the canon of prepotence.

Class Index Entry and see and see also subject entries

Class Index Entry satisfy fully, as there can not be two class index entries with the same heading. All the potency in respect of arrangement of entries, of a class index entry is totally concentrated in its leading section. Its 2nd section-directing words-and 3rd section containing class number are totally impotent.

Dictionary catalogue also respects this canon.

Book Index Entry and Name & Title Entries

CCC and AACR-2R, both the codes satisfy this canon. But AACR-2R violets in the case of government publications.

CCC INDIA, EDUCATION (Ministry of-).

AACR India. Ministry of Education.

4.3 Canon of Individualization

This canon prescribes that the name of any entity-be it of a person, a geographical entity, a corporate body, a series, a document, a subject, or a language-used as the Heading of a catalogue entry should be made to denote one and only one entity, by adding to it the necessary and sufficient number of individualizing elements.

4.3.1 Purpose

If the name of entity used as heading is not individualized, this would cause homonyms and catalogue will become a mess.

4.2.2 Implications

Both CCC and AACR-2R have provided rules for individualization. CCC prescribe Rules JB32, JB3, JB41 dealing with the individualization of geographical entities. Rule JA5 prescribes year of birth and death as individualizing element after the secondary element of the personal author.

Rule JC71 prescribe year of formation is to be added as individuating element in the case of temporary organ of government. Rule JD2 prescribes individuating element to be used for resolving the homonym is to be the term denoting its:

1. Place, if it is a localized institution;
2. Country, if it has a national status;

3. Constituent state, country, district, taluk, etc if it is a State, Country, District, Taluk, etc. Institution; and
4. Headquarters, if it cannot be individualized conveniently by any of the terms mentioned in 1,2 and 3 above.

Similarly Rule JF2 prescribes the name of the place of conference and its year be added as individualizing elements to the name of a conference which is not held periodically. Rule JE3, JE4 are for individualization of Diplomatic and Conference without specific name.

4.4 Canon of Sought Heading

This canon prescribes „that the decision for choice and rendering of heading for the main entry and added entries should be based upon the possibilities of the users“ approaches to the library catalogue“. It more no element in a catalogue entry should be included which is not relevant to its purpose. If there is no likelihood of an approach by any of the users (readers or library staff) looking for a particular choice and rendering of a heading it should not be used as heading.

4.4.1 Purpose

The purpose of this canon is to make all such entries which are likely to be demanded by the readers. For example a reader can ask a document by author, title, collaborator, or series for which author, title, collaborator and series entries are prepared, putting this information in heading section. It is also the purpose to check unnecessary bulk of entries which are not going to be asked by the readers

i.e. no need of preparing title entries for expressive titles viz Introduction to, Elements of, Primer of, Text Book of etc.

Canon of Sought heading will greatly help in framing of various rules for choice and rendering of heading. It will prove helpful in the designing of a catalogue code.

4.4.2 Implication

The decision whether any of the users may or may not make an approach for a particular type of choice of a heading will be based on the judgement of the cataloguer. The judgement should be based on experience of serving the readers on reference counter and should be applied carefully. Some of the implications are:

- (a) Change of title approach: The need for preparing entry for changed title is due to this canon e.g. a book Village India was later published under the title Village uplift in India. If both the books are purchased in the library, but only one is available when a reader approaches the library, his demand can be fulfilled even any one of these titles is available.
- (b) Extract and its approach: If an extract of a book is published and available in the library alongwith the book from which it is extracted, it will be able to satisfy reader's demand. This will only be possible if he knows its existence. For this purpose a note in catalogue entry Extract from will be helpful.
- (c) Merger book and its demand: In 1953 the phenomena of two or more books merged into one book was noticed by Ranganathan. Canon of Sought Heading prompted the framing of a rule to meet such a problem.

- (d) Pseudo series: The concept of Pseudo series owes its origin practically to this canon. What are the plays of Shakespeare's with variorum edition are available in the library was asked which lead to the concept of Pseudo series.
- (e) Sobering of Chain procedure: Chain procedure was developed in 1938 and the Canon of Sought Heading was included in 4th ed of CCC in 1958. Earlier all the links of the chain were treated as significant links for the class number L183:

L Medicine

L1 Regional organ, Medicine

L18 Head, Medicine

L183 Ear Medicine

Entry number 2 and 3 were unsought and not relevant to the purpose of readers. These were also objected by Law of Parsimony. But the way was discovered only after this canon was evolved.

- (f) Cross Reference Index Entries: Cross Reference Index Entries are created by a compromise of Law of Parsimony and Canon of Sought Heading. A reader may remember only one of the names used by the author out of the names given in the heading section. But how to satisfy the readers approach for the alternative name. This approach is served by preparing Cross Reference Index Entries.

4.5 Canon of Context

This canon prescribes that

“The rules of catalogue code should be formulated in the context of:

1. The nature of cataloguing features of the book, prevalent in the mode of book production.
2. The nature of organization of libraries prevalent in regard to the mode and quality of library service, and
3. The coming into existence of published bibliography and particularly bibliographical periodicals, and
4. That the rules should be amended from time to time to keep step with the changes in the context”.

4.5.1 Implications

In the light of this canon Ranganathan suggests to omit the bibliographical details such as pages, size, imprint etc from the main entry of catalogue in open access system, as readers can see this information personally, if needed. There is no need too of giving annotation. If library is acquiring published bibliographies, there is no need of preparing analytical entries. The formulation of Canon of Recall Value is also due to the Canon of Context, as it was felt that in a multiworded name of Institutions, Conference etc the term of highest recall value should be used as the entry element in the heading.

This canon demands that cataloguing practices should also be changed to keep abreast with changes. Hence the rules in catalogue code should also be revised keeping in view of the changes. AACR-1 has been revised to incorporate the provisions of ISBDs.

4.6 Canon of Permanence

This Canon prescribes that „no element in an entry, the heading in particular, should be subjected to change by the rules of a catalogue code except the rules themselves are changed in response to the Canon of Context“.

4.6.1 Purpose

The purpose of this canon is to achieve stability in the headings.

4.6.2 Implications

If the information once given in the heading section of an entry is changed frequently, it will involve much cost and labour. For example a author has written one book under one pseudonym. According to Canon of Ascertainability it will be rendered under that pseudonym. Later on his another pseudonym becomes familiar. If we are changing the heading of the book under recent pseudonymous name, we are not only violating the Canon of Ascertainability, but Law of Parsimony is also violated as we have to change the card of main entry and added entries. It is why the alternative names desired by Canon of Sought Heading are left to the care of Cross Reference Index Entries.

4.7 Canon of Currency

„The principle that the term used to denote a subject in a Class Index Entry of a classified catalogue and in a Subject Entry of a dictionary catalogue should be the one in current usage“.

4.7.1 Purpose

4.7.2 To serve every reader with a subject entry under the heading under the currently used terms and not obsolete term best known among the majority of the users.

4.7.2 Comments

But there is one difficulty. To decide best known subject is difficulty problem. The name of the subjects are changing with the time. For example Library Science was known as Library Economy, Political Science as Politics, Economics as Political Economy and Physics as Natural Philosophy etc. If we follow the Canon of Currency, it means we are violating the Canon of Permanence. So this conflict was resolved by a partition of field. Canon of Currency has its sway only over subject headings or Class Index Entries and Canon of Permanence over name heading i.e. name of person, geographical entity or corporate body.

There is another difficulty. Current among whom? Two different terms may be current at the same time among specialists as well as general readers. As a general rule we should adopt the multiworded general terms, as general terms are followed by both by general readers as well as by special readers as compared to one worded special terms, e.g. Child Medicine in preference to Pediatrics. If we adopt special terms, the general readers will be unable to follow it. Therefore as per Second Law of Library Science, to serve every reader common name should be preferred to special terminology in subject headings.

4.8 Canon of Consistence

CCC defines this canon as „the principle that:

1. The rules of a catalogue code should provide for all the added entries of a document to be consistent with its main entry; and
2. The entries of all documents should be consistent with one another in certain essentials such as choice, rendering, and style of writing, the heading and the other sections“.

4.8.1 Implications

Observance of this canon ensures great deal in uniformity in catalogue e.g. main entry of all documents in dictionary catalogue is author entry in all cases. The added entries of documents should be consistent with the main entry. Inconsistency of any sort will spoil the whole structure of the catalogue.

It also saves the time of the readers because they become acquainted with the consistent form in which information is rendered in all entries, which enables them to become familiar with the catalogue easily.

LESSON 4: LAWS OF CATALOGUING

1. Introduction
2. Canon of Recall Value
3. General Laws of Cataloguing
 - 3.1 Laws of Interpretation
 - 3.2 Law of Impartiality
 - 3.3 Law of Symmetry
 - 3.4 Law of Parsimony
4. Principles of Cataloguing
 - 4.1 Principle of Local Variation
 - 4.2 Principle of Osmosis
 - 4.3 Principle of Unity of Idea
 - 4.4 Principle of Probability
5. Questions
6. Further Readings

1. Introduction

In module 3, we have studied the meaning and concept of Law, Canon and Principle and their development in different stages. In this module, Canon of Recall Value, 4 general laws of cataloguing and 4 principles of cataloguing are discussed.

2. Canon of Recall Value

Canon of Recall Value, devised by Dr. S.R. Ranganathan in 1969 is a result of developmental research conducted at DRTC, Bangalore. Though it was in the mind of S.R. Ranganathan at unconscious level since 1938, when Ranganathan devised other canons in his book „Theory of Library Catalogue“, however it was given the present form in 1969.

2.1 What is Recall Value?

The relative potency of a word or word group for being called back to memory by a majority of the readers, among the group of words constituting the multiworded name of an entity in an entry in a catalogue.

2.2 Definition

This canon prescribes that “in a multiworded name of a

- (a) Person,
- (b) Government,
- (c) Near sovereign body
- (d) Quasi Government
- (e) Institution
- (f) Conference
- (g) Organ of Government, Institutions and Conference; and

In the multi worded title of a document other than periodical publication, the entry element is to consist of the word or the word group with the highest recall value”.

2.3 Need

(1) Increase in the number of corporate bodies

The complexity and interdisciplinary character of present day research and developmental activity require the sponsorship, active support and financing by corporate bodies. An increasingly larger number of corporate bodies are being formed to promote education, research and professional activity in an increasingly larger number of specialized fields. As per the study based on „World of Learning“ the average increase in the number of learned bodies per year is about 1700 on the globe. According to T.S. Rajgopaln’s study of research institutions in the natural science in India „There were 27 institutions established before 1900. Between 1900 and 1946, 209 institutions came into being. After independence, there has been a steady increase in the number of institutions and

on an average about 30 new institutions are being added every year". Hence there is a trend of increasing corporate authorship in the field of science and technology and social sciences.

(2) Increase in the variety of corporate bodies

Earlier only 3 types of corporate bodies were in existence viz Government, Institution and Conference. But in recent years new kinds of corporate bodies have come up for example, the Near sovereign body. Prior to World War I, there was hardly any sovereign body producing documents. But in the last 74 years, many such bodies came into existence. The reason of their existence is such as security, economy, and cooperation among the nations. Example of such bodies is Nato, Cento, OAS, OAU, Council of Europe, SAARC, etc.

Some corporate bodies with the names Colloquium, Tutorial, Seminar, Workshop, Project, Programme, Task Force, and Consultants etc are also comparatively newcomers in the field.

All these add to the cataloguing problems and difficulties of recall of correct name by the readers.

(3) Near Homonymous Name

Due to rise in the number of institutions and many institutions in the same field, their names are more or less similar or near homonymous. For instance in „International Relations“ alone there are more than 100 Institutions or centres all over the world, viz

Institute for International Relations.

School of International Affairs.

Royal Institute of International Affairs.

Australian Institution of International Affairs.

Indian Council of World Affairs.

(4) Multiwordedness of the names

Earlier most of the corporate bodies were of one term only. But with the increasing number of corporate bodies, the tendency for multiwordedness in the names of bodies started growing. According to the study based on World of Learning between 1900-29, 50% bodies were with 1 to 3 words but now it has decreased. Now 70 to 80% bodies are of more than 3 words.

(5) Alternative Name

- (a) Alternative name, both names in use currently viz Jaykar Granthalaya for Poone University Library, Ratan Tata Library or Library of the Delhi School of Economics.
- (b) Abbreviated name generally accepted by the readers viz
ISO= International Standards Organization

FID= International Federation for Documentation.
- (c) Same abbreviation used for many institution viz. ISI is used for Indian Standard Institution, Indian Statistical Institution and Institute of Scientific Information.
- (d) Name, usually short, used in small, private circle viz Elsinore Conference (among librarians) = International Conference on Classification and Information Retrieval (1964).
- (e) Old name viz IIB = FID.
- (f) Variation in the form of citation: References are cited either in articles, bibliographies or by other persons. There is always variations in their citations. Some time references are quoted in text and there is variation in title page name. for example International Federation for Documentation may be quoted as Federation International de Documentation (French name).

(6) Limitation of memory of readers

Due to above reasons there is a variety of institutions with number of permutation and combination of terms. It is psychological impossible for even a specialist in the field to recall or remember the name of these bodies exactly in the order they occur in the title pages of documents or in citations. In this connection 4 contexts can be recognized:

- (a) Readers stating all the components in their correct sequence;
- (b) Readers recall in one or more but not all the words in the name;
- (c) The reader recalling an alternative name; and
- (d) The reader conforming between some element in the name of one with the name of the other.

2.4 Application of Canon of Recall Value

(1) Whole Government

The Entry element will be word or word group indicting the name of territory or area of jurisdiction viz name of country or state. There will be no secondary element viz.

INDIA for Government of India

CHINA (Republic) for Government of the Republic of China.

(2) Whole near sovereign body

Entry element will be word or word group indicating a subject, name of the body as whole and secondary element is rest of the words. Use of dash will be made.

Viz UNITED NATION (-s Organization)

EUROPE (Council of -).

(3) Whole quasi Government

Entry element will be word or word group indicating the territory or area of jurisdiction such as the name of district, taluk, municipally, corporation, panchayat etc. and no Secondary element viz

MYSORE (District) for District Board of Mysore

MYSORE (City) for Mysore Municipality.

(4) Whole Institution

Entry element (1) Word or word group indicating a subject forming the purview of the whole institution viz National Library (India). (2) The word or word group indicating a class or persons or a category of corporate bodies forming the purview of the whole institution viz International Council of Scientific Unions. (3) The word or word group indicating nature of research viz Advanced Studies, Applied Research etc. (4) The word or word group indicating sphere or work viz University, College, Library etc. (5) Fanciful word such as a name of person viz Podar School. Secondary element will be rest of the words viz.

LABORATORY (Regional Research -) Use of dash is made

LIBRARY (National -) (India) Use of dash is made

ART (Society of India)

(5) Whole Conference

Entry element is (1) The word or word group indicating a subject forming the purview of the conference; and (2) The word or word group indicating classes of persons forming the purview of the conference. Secondary element will be rest of word. Use of dash is made. viz SPECTROSCOPY (International – Colloquium).

PEACE (Conference) (Paris) (1919).

INDIAN RESIDENTS (Cape Town) (1958).

(6) Organs of above

Government: RAJASTHAN, COURT (High).

INDIA, PLANNING (Commission).

Kshitish INDIA, FINANCE (Commission) (1951) (Chairman:
Chandra Neogy).

Near Sovereign: UNITED NATION (-s Organization), SECURITY
(Council).

UNITED NATIONS, SECRETARY GENERAL (U
Thant). Quasi Government: BANGALORE (City), ENGINEERING
(Department).

JAIPUR (City), ADMINISTRATOR (A K Jain).

Institution: COMMERCE (Chamber of -), PRESIDENT (R K
Bajaj).

ASIA (Asian Development Bank), GOVERNOR (Board
of -s). Conference: LIBRARY (All India-Conference)
(Bhuvneshwar) (1975),

ORGANISING (Committee).

(7) Title as Heading

General biographical works and encyclopedias of general science, useful
arts, social sciences etc are entered under title.

Entry element will be earliest of the following:

1. Word of word group indicating a subject for the purview of the document.
2. Word of word group indicating class of person for the purview of the document.
3. Fanciful word or word group.
4. Title as a whole.

In rendering, first two words will be in Capitals. Remaining word group will be secondary element. Use of dash will indicate the blank space of entry element as per rule.

Example

SOCIAL SCIENCES (Encyclopedia of -).

SCIENCE (American men of -).

ENCYCLOPAEDIA (Britannica).

AMERICA (Who was who in -).

2.5 Relation between Canon of Recall Value and other canons

2.5.1 Canon of Ascertainability

Recall value should only be searched in the term used on the title page or overflow pages. So canon of ascertainability will request the publishing world to give the entry word or name of personal or corporate author in deeper impression, as they are the best judge of the term having highest recall value. For example in Association of Special Libraries and Information Centres, neither Special Libraries nor Information Centres are the terms of highest recall value. It is the term libraries having the highest recall value.

2.5.2 Canon of Prepotence

Potency in leading section that too in the entry element. Minimum potency should be allowed to overflow. Both the canons seem common. But there is slight difference. According to Canon of Recall value, the entry element which has the highest potency will be entered in the heading. For example in Association of Public Libraries, According to Canon of Prepotene it will be

rendered as – PUBLIC LIBRARIES (Association of -) while according to Recall value as LIBRARY (Association of Public -ies).

Difference: Canon of prepotence is primarily concerned with the arrangement of entries among the various entries. Recall value is concerned with the finding out of the entry element, to be used in a Heading with the highest recall value. Prepotence is satisfied in CCC by using call number in the leading section while Recall deals mainly with the alphabetical part of the catalogue.

2.5.3 Canon of Individualization

Individualization is to resolve homonym. Its sway is over the heading section of the entries may it be person, geographic entity, corporate bodies, series, document, subject or a language while Recall has its sway over the names of persons and corporate bodies having multiworded names. Individualization does not make any distinction on the basis of the number of words of an entry while Recall is only applicable if it is a multiworded entry. The duty of Recall is over with the selection of the term having highest recall value. Canon of Individualization, individualizes that term with the other heading viz All India Board of Adult Education and National Council of Adult Education. Here Adult Education is of highest recall value and other words are used as individualizing element.

2.5.4 Canon of Context

According to Canon of Context, with the change in the mode of book production, the nature of the organization of libraries and the quality of library service, the rules should be amended from time to time.

The Canon of Recall value has emerged due to this change in the practice. Due to multiplicity of learned bodies and readers capacity to remember it, this canon was produced.

2.5.5 Canon of Sought Heading

Canon of Sought Heading, Canon of Prepotence and Canon of Recall Value seem to be the members of the same family having close relationship.

It is the duty of Canon of Sought Heading to see that all the sought approaches of the readers are served by the catalogue and there should not be any entry which is not likely to be referred by the readers and the staff.

Approach of the readers towards the catalogue is the backbone of both the canons and both are the instruments in the hands of the catalogue for making the journey of the readers through the library catalogue speedy, smooth and pleasant one. Answers to the demands of both the canons are basically the matter of flair, common sense and the intelligence of the cataloguer. The experience of the cataloguer and his day to day contact with the readers enables him to find out their actual requirements, approaches and problems. Majority of CRIE's are due to the origin to the Canon of Sought Heading and the Canon of Recall Value will also give rise to a number of entries because opinions may differ about the possession of absolute recall value in different words or sometimes more than one word or group of words. In such cases, the only solution to the demands of different readers is CRIE.

3. General Laws of Cataloguing

General laws are those laws which are applicable to the library science as a whole as well as all the branches of library science including cataloguing. There are following general laws:

1. Laws of Interpretation
2. Law of Impartiality
3. Law of Symmetry
4. Law of Parsimony

3.1 Laws of Interpretation

CCC define Laws of Interpretation as „the well known principles of interpretation, such as the 1,008 principles of interpretation listed in the Nyaya-kosa“.

Implications

A catalogue code is a like a legal document. Therefore, it should be interpreted like a legal text. This law prescribe that in the situation of conflict between two canons or rules it should be resolved with the help of this canon. This also prescribes that if a document can not be catalogued under any existing rule, the solution may be sought after the fresh interpretation of rules or necessary amendment should be made in the code.

3.2 Law of Impartiality

This law prescribes „that between two or more claimants-say, for use as heading – the preference of any one should be made only on sufficient grounds, and not arbitrarily“.

Implications

For books written by two joint authors both the authors have an equal right for being chosen as a heading. For a book having alternative title, alternative title entry is prepared. In the same manner in case of multiple series, this law directs that all series should get equal right for being given as a series.

3.3 Law of Symmetry

This law prescribes „that if two entities or situations which admit of being regarded as symmetrical counterparts of each other, if one of the entities or the situations is given weight in any particular context, the other entity or situation should also be given a corresponding weight“.

Implications

For books of two joint authors both the names are used in heading section. As a result of this law two book index entries are to be prepared. In first book index entry first author will come first and second author will precede it. In second book index entry their names will be reversed.

3.4. Law of Parsimony

This Law prescribes „that between two or more possible alternative rules bearing on a particular phenomenon, the one, leading to overall economy of man-power, material, money and time considered together with proper weightage, is to be preferred“.

Implications

This law demands economy and saving in the library practices. It functions just like a finance secretary. The Law of Parsimony struggles with the other laws of library science and canons.

This law stresses that in open access library, as readers are free to refer the books personally, there is no need of giving information about the physical details and imprint in the catalogue entry. It also suggests of making difference between main entry and added entries in case of typewritten or handwritten and printed cards and there will be no difference in case of unit card system in which catalogue cards are either printed or duplicated by some mechanized method.

Cross Reference Index Entries are the creation of compromise between Law of Parsimony and Canon of Sought Heading. Canon of Sought Heading demands to satisfy Editor of Series approach by preparing book index entry, while it is objected by Law of Parsimony. As a compromise situation, in place of many book index entries, one cross reference index entry is prepared.

Sobering of chain procedure was also possible due to Law Parsimony. Before the introduction of this Law, all the entries of chain procedure were treated as sought links, which was against the Law of Parsimony. After its introduction, only relevant headings are used in preparing class index entries.

4. Principles of Cataloguing

CCC has recognized following 4 principles of cataloguing:

1. Principle of Local Variation
2. Principle of Osmosis
3. Principle of Unity of Idea
4. Principle of Probability

4.1 Principle of Local Variation

No code can function successfully on the international level without any provision of local consideration as now a days there are many diversities in the publications of various languages.

There should be clear instructions in International catalogue code that what factor will be tackled by a national catalogue code. In the same way national catalogue code should mention the preview of local catalogue code or linguistic catalogue code, viz in English there are capital, small and italics but in Hindi and other languages this is not the facility. Hence catalogue code should deal with style-viz dominance, subordination and the like. And the actual method of implementing these prescription will have to be stated only in national code.

1. Rules regarding transliteration
2. Rendering of personal name problems
3. Single worded surnames Saxena, Jain, Dasgupta
4. Catalogue of fleeting materials-Bank nationalization, Simla pact
5. To keep it in a classified order is sufficient
6. Selective cataloguing – some book require only shelf listing, but for incunabula detailed cataloguing is necessary.

4.2 Principle of Osmosis

(It means living with the present)

Principle of Osmosis means when a change in a catalogue code or in the scheme of classification becomes necessary in deference to the Canon or Context ... that should be adopted and implemented:

There are 2 ways:

1. To re-classify or re-catalogue the entire collection immediately with additional staff. If this is done, it will cost enormously. The law of parsimony will not allow. Book fund will be shortened, Reference service will to be cut out etc.
2. Second way is to close the eyes to the change in catalogue code or classification scheme. Then laws of library science and canon of context will cry.

And the compromise in both the situations is the Principle of Osmosis:

1. All the new accessions to be classified and catalogued according to new systems.
2. Out of old collection, which are in much use, be reclassified and recatalogued, with additional temporary staff during first few months.
3. They should be kept separately and kept with new collection. Their cards also to be kept with new collection cards.
4. The rest of the collection be known as old collection. Similarly their cards be kept separately.
5. Readers attention to be invited towards new collection and old.
6. When any book is taken out from old collection, after return it should be reclassified and recatalogued and kept with new collection.

4.3 Principle of Unity of Idea

A catalogue code should deal with the following elements:

1. Definition of cataloguing terms;
2. Interpretation of cataloguing terms in deferent contexts;
3. Choice of information for a section of an entry;
4. Rendering of it; and
5. Style to record it.

This principle prescribes that no rule in a catalogue code should deal with more than one of the elements mentioned above, in respect of any problem.

Principle of Unity of Idea is a basic principle which should guide the work of formulation of rules in a code. Rules of catalogue code should guide in

determining authorship, rendering and recording (place of writing and style of writing) based on unity of idea.

4.4 Principle of Probability

The principle was introduced by Ranganathan in 1969. This principle prescribes that „making the word belonging to the more numerous group of entry, increases the probability for satisfying the Canon of Prepotence“. Thus this principle indicates that a word belonging to the more numerous group if used as entry element has a greater probability for satisfying the Canon of Prepotence.

LESSON 5: PHYSICAL FORMS OF LIBRARY CATALOGUE

1. Introduction
2. Physical forms of Library Catalogue
 - 2.1 Types of Physical form
 - 2.1.1 Conventional form
 - 2.1.1.1 Register or Printed or Book catalogue
 - 2.1.1.2 Card catalogue
 - 2.1.1.3 Sheaf catalogue
 - 2.1.2 Non-conventional form
 - 2.1.2.1 Visible Index
 - 2.1.2.2 Microform catalogue
3. Inner forms of Library Catalogue
 - 3.1 Alphabetical catalogue
 - 3.1.1 Author catalogue
 - 3.1.2 Name catalogue
 - 3.1.3 Alphabetical subject catalogue
 - 3.1.4 Title catalogue
 - 3.1.5 Dictionary catalogue
 - 3.2 Classified catalogue
 - 3.3 Alphabetic-classed catalogue
4. Questions
5. Further Readings

1. Introduction

The form of library catalogue can be studied by dividing it in two forms:

- (i) Outer or Physical forms of library catalogue.
- (ii) Kinds or Inner forms of library catalogue.

2. Physical form of Library Catalogue

Outer or Physical form is related to external shape, size and appearance of catalogue.

2.1 Type of Physical forms

Physical forms of library catalogue can be studied by dividing it in the following types:

- (i) Conventional forms
- (ii) Non Conventional forms

2.1.1 Conventional forms

Conventional forms can be divided into following types:

- (a) Printed or Register or Book form
- (b) Card catalogue
- (c) Sheaf catalogue

2.1.1.1 Register or Printed or Book form

The catalogue in which catalogue entries are hand-written or printed and bound into a volume is known as Register or Printed or Book Catalogue. Many big libraries, before the adoption of open access, were publishing their catalogues and were supplementing by additions, for keeping them upto date. In United States first book catalogue is Harvard catalogue which was published in 1723. Yale catalogue was brought out in 1745. Other examples are of British

Museum, Glasgow and Liverpool catalogue and of National Library Calcutta Catalogue.

2.1.1.1.1 Advantages

This form of library catalogue remained in use for many years due to its numerous advantages. Its advantages can be enumerated as:

1. It is portable, hence can be consulted in any section of the library or even outside the library i.e. at the home of the users. But a catalogue of big libraries in multi volume can be not be consulted outside the library.
2. Due to its portable size, it is easy to handle and consult. It can be referred with greater speed.
3. Several entries can be seen at a time.
4. Printed catalogue of big libraries can be used as a reference and book selection tool y other libraries.
5. Occupies less space.
6. If multiple copies of the catalogue are there, several readers can refer it at the same time.

2.1.1.1.2 Disadvantages

After serving the readers for many years, this form of catalogue was replaced by card form of catalogue due to following limitations of this form. Some of the limitation are as follows:

1. Too expensive to produce, and laborious process to compile it.
2. Always remains outdated, as no facility of interpolation and extrapolation is available in this form.
3. Less durable.
4. To avail the services of cooperative cataloguing is not possible as cooperative cataloguing services are available in card form only.
5. No facility of guiding is possible in this form.

Due to above limitations, printed catalogue was replaced by card catalogue.

2.1.1.2 Card form of Catalogue

The first use of cards for catalogue was made by Rosier for preparing catalogue of Paris Academy of Science. It is widely used from of catalogue. Norris refers to its use in France in 1790s and French code was meant for card catalogue. In United Kingdom its first use was made by Trinity College, Dublin in early 19th century.

In this form of catalogue, entries are made and arranged in any desired order, on cards of uniform size i.e. 12.5 x 7.5 cm. and kept in trays or drawers of catalogue cabinet. The cabinet containing cards is kept on stand. A rod passes through the hole of cards for locking purposes. In this form one entry is prepared on one card.

2.1.1.2.1 Advantages

The reasons of popularity of this form can be enumerated as follows:

1. The facility of insertion and withdrawal of cards keeps this catalogue always up todate, hence far from obsolete.
2. Can be easily guided.
3. As the entries are prepared on cards, it is easier to consult and handle by the users.
4. Card catalogue is more durable from other physical forms.
5. Being a single unit, cards can be arranged in any desired order.
6. Cooperative cataloguing is possible.
7. Economic to maintain and cards can be changed at any time.
8. Present a neat appearance.

2.1.1.2.2 Disadvantages

Inspite of several advantages, it has the following disadvantages:

1. Occupies much space.
2. Only one person can consult one tray, as only one copy of the catalogue is provided in the libraries.
3. Not portable. Due to its size and bulk, it is not portable and can be consulted within the library where it is kept.

4. Cards and cabinets are too expensive.
5. Mischievous readers can easily take out the cards, hence less protected. Though a thin iron rod passes through it, if someone intentionally wants to remove a card, he can do so without much effort.

2.1.1.3 Sheaf Catalogue

A catalogue formed by sheets, slips, or cards fastened in a binder that permits the insertion or new material. Slips are usually of 6'' x 4'' size notched at the left hand side. Its first use was made by the University Library, Leydon, Holland in 1876. It was improved by Madam Ricci in 1891. J.D. Brown invented in 1892 adjustable sheaf catalogue. The modern form was invented by Arthur Lambert. It provides shelf locking wicket. It is usually used in public libraries of U.K. In this form some difficulties of Book or Printed catalogue are removed.

2.1.1.3.1 Advantages

Some of the advantages of Sheaf catalogue are as follows:

1. It combines the advantages of Book and Card form. Facility of insertion and removal of entries is provided in this form.
2. More than one entry can be prepared on a slip.
3. To prepare entries on slips or paper, it is easier and cheaper to produce.
4. Occupies less space than card catalogue.
5. Easier to handle and can be removed from the stand.

2.1.1.3.2 Disadvantages

It is claimed that this form combines the advantages of Book catalogue and card catalogue. But this form neither provides the advantages of Book catalogue nor card catalogue. Due to following disadvantages, this form could not get popularity in library world. Some major disadvantages of this catalogue are as follows:

1. If one book is entered on one slip, it is wastage of stationery. If two or three books are entered, it is overcrowded and needs retyping.
2. Carbon copies are not so pleasant as that of original.
3. Slips of paper are less durable as compared to cards.
4. Though facility of insertion and withdrawal, but not so easy as in card form.
5. Cooperative cataloguing is not possible.
6. Guiding is not satisfactory.
7. Can only be consulted within the premises of the library.

2.1.2 Non-Conventional Form

As a result of rapid development of computer and communication technology, now a days a newer form of catalogue known as non-conventional or modern form is replacing conventional forms of library catalogues. These forms are:

1. Visible index form
2. Microform catalogue
3. Machine readable catalogue

3.1.2.1 Visible Index

Visible index catalogue consists of strips mounted on a frame or cards held flat, hinged and with edge of each card protecting so as to make the heading visible. The cards are usually of 12.6 x 20 cm. size. The card is inserted into a hinged kraft pocket, exposing the top portion. These pockets are held in specially prepared steel cabinets. In each tray of cabinet a good number of cards can be housed. When a tray is pulled out, only the edges of card are visible through which the headings of entries alone can be seen. This type of non-conventional catalogue is used in selected Indian libraries for maintaining records pertaining to current periodicals.

It does not possess the qualities of a card catalogue. The catalogue occupies more space even than the printed book catalogue. It is not portable and there is no possibility of having multiple copies.

Visible index is not useful for libraries. This form of catalogue is used for the listing of gramophone records, illustrations, periodicals etc.

2.1.2.2 Microform Catalogue

In this form of catalogue entries are reduced and printed upon a film or fiche. Its limitations are that they can not be used by naked eyes, but will require microfilm reader for magnifying the image on the film or fiche. However some of the advantages of microform catalogues are compactness, occupying less space, portability and accessibility to users, possibility of multiple copies at the lower cost, easiness to use and maintain.

2.1.2.3 Machine Readable Catalogue

The latest trend in libraries is to use computerized catalogues. Catalogues are prepared on magnetic tape or magnetic disc. Catalogue can be searched at a certain times known as off line. In on line method entries are held in computer files and search can be made directly to the computer or projected on the screen at any time.

Three advantages of computer catalogues are keeping update catalogue with speed and efficiency, speedy search for all the sought approaches and multiplicity of copies.

3. Form of Library Catalogue

The form which refers to various varieties of construction and arrangement of the catalogue is known as Inner or Internal form. These are broadly divided into following three types:

- (i) Alphabetical catalogue
- (ii) Classified catalogue
- (iii) Alphabetic-classed catalogue

3.1 Alphabetical Catalogue

Alphabetical catalogues are again of following types:

- (a) Author catalogue
- (b) Title catalogue
- (c) Name catalogue
- (d) Subject catalogue
- (e) Dictionary catalogue

3.1.1 Author Catalogue

Author catalogue or variation of it (i.e. pure author catalogue, author entry in a dictionary catalogue or author index entry in a classified catalogue) is supreme in value and importance. Reader can approach subject or title by many ways but author only by exact expression as authors' name is indisputable thing. However alternative author approach is served by references.

In author catalogue, entries are arranged alphabetically. It tells about the works of a given author possessed by the library or whether library is having a particular work of the author. Author is a broad term which includes editor, compiler, translator, reviser etc.

3.1.1.1 Advantages

Its main advantages are:

1. It brings all the works of an author at one place instead of scattering them throughout the catalogue according to their subject.
2. It discloses whether a particular book by a particular author is in library or not.

3.1.1.1.2 Disadvantages

Its limitations are:-

1. Pure author catalogue cannot serve the readers properly, hence added entries under editor, translator, reviser, illustrator, distinctive title etc. are to be provided for making it more satisfactory tool.
2. It should also be equipped with a subject index as an auxiliary approach.

3.1.2 Name Catalogue

Name catalogue is restricted to author and subject catalogue arranged in one alphabetical sequence-subject catalogue is restricted to sub-entries for the names of persons according to subjects headings consisting of names of persons treated as subject viz

Basant, Annie (author)

Chaucer: critical study (Name title)

Delhi University (author)

Gandhi, Mohandas Karamchand – Biography (Name title)

Ranganathan series (Name series)

Sen, Prafull Kumar, tr.

Tagore, Abindra Nath, ill.

3.1.3 Alphabetical Subject Catalogue

It is the catalogue in which the headings on the entries are made under the name of the specific subject of the book and are arranged alphabetically. This catalogue satisfy readers approach for the subject point of view only.

3.1.4 Title Catalogue

It consists of entries for books under their title arranged alphabetically. It is useful for oriental works i.e. Sanskrit and Pali books as authors have given distinctive names to their works. However, title catalogue in its pure form is rare now-a-days.

3.1.5 Dictionary Catalogue

According to ALA Glossary of Library Terms dictionary catalogue is 'A catalogue usually on cards, in which all the entries (author, title, subject series etc) and their related references are arranged together in one general alphabet. The sub-arrangement frequently varies from the strictly alphabetical'. According to S.R. Ranganathan, 'Catalogue in which all the entries are word entries, hence (i) it consists of one part only, (ii) entries are arranged alphabetically like dictionary, and (iii) main entry begins with the name of author or substitute for it' is known as dictionary catalogue.

It is called a dictionary catalogue because the entries and references are arranged in a single alphabet, like a dictionary. The dictionary catalogue is very popular in the United States. In fact it was Charles Ammie Cutter, famous writer of Rules for dictionary catalogue, is responsible for the universal acceptance of this form of catalogue in America.

3.1.5.1 Advantages

The main reason for dictionary catalogue's long maintained popularity was its simpleness. The main advantages are:

1. It is simple in its use. Readers are familiar with the arrangement, hence it is easier to consult and use as there is one sequence only to be consulted for.
2. It provides formation to the readers if author, specific subject, title or series is known. For example if a reader knows that a particular book belong to Wiley Farm series, and does not remember author, title, subject etc., he can directly consult the catalogue under alphabet and he will find his desired book.
3. Ample use of references may also be made, which is not possible in Classified catalogue (see and see also references). These references leads from one subject to another and on heading to another.
4. It provides excellent service in direct manner if the reader approaches the catalogue through the correct and precise enunciation (expression) on his specific subject. Suppose a reader wants material on horses, by consulting the catalogue under horse, he will get all the books on Horses at one place. He

- need not to possess the knowledge that it is a part of Zoology or domestic animals or livestock or farm animals. These subjects are also related each other by preparing see also subject references.
5. Some time, it proves superior to classified catalogue as it groups related subjects which are scattered in classified catalogue i.e.

India, Architecture NA44

India, Economics X.44

India, Music NR44

India, Painting NQ44

India, Philosophy R6 and so on

Reader who wants books on 'Indology' will get all books at one place.

3.1.5.2 Disadvantages

Inspite of all the above advantages, there is a great volume of adverse criticism that the dictionary catalogue has tended to become too complex and unwieldy. Its main disadvantages are:

1. This kind of catalogue is unable to satisfy the demand of the readers, if the approach is not made through the correct expression of the specific subject. For example if reader wants material of Chess and he is consulting the catalogue under indoor game, he will not find specific book devoted fully to chess.
2. It is not as simple as it appears. The alphabetical arrangement scatter the related subjects in unhelpful alphabetical order. Hence users cannot get a full view of the entire ramifications of a subject at one particular place. For example horse, stallion, mare, colt etc all are related subjects but the cards will be scattered under the alphabets C,H,M,S etc.
3. The above scattered subjects are connected through see and see also subject entries, which are a source of irritation of the readers.
4. Though it is useful in public libraries, but its value in a research library is discredited.

5. The change in terminology of subject, thousands of cards are required to be changed.

3.2 Classified Catalogue

S.R. Ranganathan defines classified catalogue as a 'Catalogue in which some entries are number entries and some are word entries'. Hence it is divided into two parts- (i) Classified and (ii) Alphabetical. Classified Part of Classified catalogue consists all its number entries (i.e. Main Entry, Cross Reference Entries), and Alphabetical part consists all the word entries (i.e. Book Index Entries, Class Index Entries and Cross Reference Index Entries). According to Margaret Mann, Classified catalogue is a 'subject catalogue in which the entries are arranged by some recognized system of classification, the notation, or classification symbol furnishes the method of arrangement'. According to H.A. Shap 'Classified catalogue arranges its entries in a systematic order of subjects, the order usually being that of the classification scheme used for the arrangement of the books on the shelves'. In this form of catalogue the entries for books are arranged according to the class symbols.

Advocating the Classified catalogue, S.R. Ranganathan says that the subject approach of the readers can only be served by classified catalogue. It spreads before readers a full, connected, panorama of all material on his specific subject, all its subdivisions, all broader subjects of which it is itself a subdivision. A reader is unable to name the specific subject exactly. It is always a broader or narrower subject that is usually thought of. Alphabetical part will direct him to the region of the classified part covered by the number so and so. Hence it displays the full field of his interest.

3.2.1 Advantages

Classified catalogue possess the following advantages:

1. The chief advantage possessed by classified catalogue is that main entry not only lies under its specific subject but in the neighborhood of entries of the related subjects.

For example

MY3	Indoor games	800	Literature
MY31	Card	810	American Literature
MY32	Chance game	820	English Literature
MY321	Dice	821	English Poetry
MY322	Chess	822	English Drama
MY33	Billiards	823	English Fiction

2. It increases the familiarity of readers with larger number of books as related books lie in neighborhood.
3. It discloses the strength and weakness of the library by subjects, as books on one subject will be at one place.
4. The catalogue in a particular subject may be got printed.
5. It reproduces the systematic order of the classified scheme in use on the shelves.
6. Its class index entries are easier to refer.
7. If and internationally accepted or widely used classification scheme is used it will help in cooperative cataloguing and will promote international bibliography.
8. In case of change of terminology of subject, only in alphabetical part subject index cards are to be changed. No change in classified part is needed.
9. It is suggested that it is cheaper to compile, easy to file and find books.
10. In case library using card catalogue, classified and alphabetical part are arranged separately, more readers can consult the catalogue at a time.

3.2.2 Disadvantages

Inspite of above mentioned several advantages, there are a few disadvantages:

1. Classified catalogue does not offer approach there is a two step process. First reader will have to consult the alphabetical part and then classified part. So it is against the 4th Law of library science and Law of Parsimony.
2. Readers are not pleased with it is notation of classification scheme is not easily comprehensible to average user.

3. With any growth and new development in the universe of knowledge, the portion of the classification schedule may become obsolete and thus relevant part of the subject catalogue has to be revised.

3.3. Alphabetic classed Catalogue

Cutter has defined alphabetical classed catalogue as ‘an alphabetic subject catalogue in which the subjects are grouped in broad classes with numerous alphabetic sub-divisions. It may also include author and title entries in the same alphabet’. It follows two methods of arrangement (i) major subject divisions are arranged in a classified order and subordinate subjects within major division in the alphabetical order (ii) major subject divisions are put in alphabetical order with subordinate subjects are arranged in classified sequence. For example major divisions are Mathematics, Physics, Engineering, Chemistry, Technology etc are arranged in classified sequence and within major subject like Physics its sub divisions like Dynamics, Electricity, Gases, Heat, Light, Magnetism etc will be arranged alphabetically. Like this other method will be vice-versa to the above arrangement. In this form of catalogue, the combined advantages of both alphabetical and classified form are achieved. Reader can get all the related material in a collection in a logical manner. As this form of catalogue has not been experimented fully, much can not be said authentically about this form.

LESSON 6: TYPES OF SUBJECT CATALOGUE

1. Introduction
2. Definition of subject catalogue
3. Objectives of subject catalogue
4. Types of subject catalogue
 - 4.1 Alphabetical subject catalogue
 - 4.2 Alphabetico-classed catalogue
 - 4.3 Classified catalogue
5. Importance of the List of Subject Headings (LSH)
6. Subject headings
 - 6.1 Definition

1 Introduction

Library catalogue has many inner forms, such as author, title and subject for access to collection of the documents of a library. When the user wants to find document through subject instead of author/title of a document, the facility of subject catalogue for subject approach is essential. Using such an approach, the user is able to find documents which are available on a given subject. For the purpose, library also maintains the subject catalogue displaying the subject entries. A subject catalogue of a library is one which

Shows documents on a specific subject possessed by a library. In other words, it attempts to bring together entries on a specific subject. Thus, the process of preparing subject entries for documents and organizing them for subsequent retrieval is known as subject cataloguing.

The main purpose of subject cataloguing is to list all the materials on a given topic under one uniform word or phrase that a library has in its collection. That uniform word or phrase is called subject heading. A subject heading is used in the library catalogue to express a topic. The use of authorized words or phrases only, with cross-references from unauthorized synonyms, is the essence of bibliographic control in subject cataloguing.

The purpose of a subject authority file, such as the ***Sears List of Subject Headings*** or the ***Library of Congress List of Subject Headings***, is to provide a basic vocabulary of authorized terms together with suggestions for useful cross-references. Both lists is simply an alphabetical list of terms that have been established over time as warranted by the materials being catalogued. A subject heading list also indicates relationships among terms but does not attempt to establish any comprehensive hierarchies. In addition to simple descriptors, a subject heading list can include pre-coordinated strings composed of subject terms with subdivisions.

However, for a perfect subject catalogue, subject approach is the most fundamental approach on the part of cataloguer and user.

2 Definition

Cutter defined the functions of a library catalogue in 1876 when he published the first edition of his *Rules for a dictionary catalog*. He said that it should:

1. enable a person to find a book of which either (a) the author or (b) the title or (c) the subject is known ;
2. show what the library (d) by a given author , (e) on a given subject and (f) in a given kind of literature;
3. Assist in the choice of a book (g) as to its edition (bibliographical) and (h)as to its character (topical).

These objectives still hold today, but the word book is replaced by item or document. Cutter's objectives (c) and (e) are met by the subject catalogue. It means when headings on the entries represent the coverage of a specific subject matter of books/document and such entries are arranged systematically for the purpose of identification and reference of a particular reference or a few selected references, it can be regarded as a subject catalogue. If the headings are words, terms or phrases representing a specific subject and are arranged in alphabetical order it is an alphabetical subject catalogue. Thus, a subject catalogue is one which shows documents on a specific subject possessed by a given library. It attempts to bring together entries on a specific subject.

3 Objectives of Subject Catalogue

The objectives of a library catalogue were broadly described by Charles Ammi Cutter in 1876. He stated that to enable a person to find a book of which the subject is known and to show what the library has on a given subject. These objectives emphasize on subject approach and for which the library maintains the subject catalogue consisting subject entries. All forms of subject catalogues have a two-fold objectives: first to enable a user to identify documents on a given subject and second, to make known the presence of material on allied or related subjects. Shera and Egan (1956) summarized the objectives of subject cataloguing as follows:

1. To provide subject approach to access to relevant materials of a library through all suitable principles of subject organisation, i.e. subject headings.
2. To bring together references to materials, which treat substantially the same subject regardless of differences among groups of subject specialists, and/or from the changing nature of the concepts with the discipline itself,
3. To show such affiliations among subject fields, which may depend upon use or application of knowledge;
4. To provide entry through any vocabulary common to a considerable group of users, specialists or laymen;
5. To provide formal description of the subject content of any bibliographic unit in the most precise, or specific terms possible: whether the description is in the form of a class, number or symbol; and

6. To provide means to the users to make a selection from among all terms in any particular category, according to any chosen set of criteria such as, most thorough, most recent, etc.

4 Types of Subject Catalogue

A subject catalogue is one which shows documents on a specific subject possessed by a given library. It attempts to bring together entries on a specific subject. A subject can be expressed either through words chosen to describe the different subjects or through notation based on a scheme of classification. In the first case it is called a subject heading and in the second case it is named as a class number. Subject catalogue can be categorized on the basis of variation of syntax and arrangement of subject headings. As such, subject catalogues are of the following types:

4.1 Alphabetical Subject Catalogue: It contains subject entries and cross reference arranged alphabetically in one sequence. Subject headings consist of a heading, from the index vocabulary, and a description which identifies the item being catalogued. Where it contains more than one word, it is necessary to lay down a significance order, to bring to the front the word most likely to be sought. The index vocabulary may be enumerative, may list simple and composite headings, and a section of readymade references section for relevant headings; such lists as ***Sears list of Subject headings*** and ***Library of Congress List of Subject headings*** are of this kind of authority files.

Alternatively, we can also see in a compilation of an authority file separately on cards, in which we will find heading used, references made to them, and heading not used. It is possible to use the subject catalogue itself as the authority file; it certainly shows past practice, but it is rather more difficult to show reference made to a heading clearly in the subject catalogue than in a separate file.

In alphabetical subject catalogue we can find two types of headings:

(a) **Alphabetic-Direct heading:** It contains natural form of a phrase taken from ordinary usage without a symbol. For example headings like **EDUCATIONAL SOCIOLOGY; RURAL SOCIOLOGY; CHRISTIAN SOCIOLOGY** are direct headings.

(b) **Alphabetico-Indirect heading:** It contains heading of at least two words with a connecting symbol mostly by a comma (,) like **SOCIOLOGY, EDUCATIONAL; SOCIOLOGY, RURAL; SOCIOLOGY, CHRISTIAN**. The alphabetical filing of these headings provides collocation of materials relating to traditional fields of study.

4.2 Alphabetic-Classed Catalogue: It contains the self-order of the alphabetical approach of indirect headings, in contrast with the direct headings, with the helpful grouping of the systematic approach by using an alphabetic-classed arrangement; within each heading, subheadings are arranged alphabetically.

Let us examine the example given below:

EDUCATION

EDUCATION, ADULT

EDUCATION, POST GRADUATE

EDUCATION, SECONDARY

EDUCATION, SECONDARY, MANAGEMENT

EDUCATION, UNIVERSITY

EDUCATION, UNIVERSITY, EXAMINATION

EDUCATION, UNIVERSITY, MANAGEMENT

EDUCATION, UNIVERSITY, TEACHING TECHNIQUE

In the above example, every heading belonging to EDUCATION has been brought together. Within EDUCATION, there is again alphabetical scattering. Headings beginning with EDUCATION, UNIVERSITY have been brought together and there is again alphabetical scattering, this type of catalogue is called alphabetic-classed catalogue.

4.3 Classified Catalogue: It is based on the notation used in the scheme of classification.

In a systematic arrangement, it is the notation which forms the index vocabulary for arrangement of subject entries. As such, systematic arrangement brings related subjects together by using notation as its index vocabulary.

Let us examine the following example of Colon Classification and Dewey decimal classification respectively:

In Colon Classification:

T1 PRE-SECONDARY EDUCATION

T2 SECONDARY EDUCATION

T3 ADULT EDUCATION

T4 UNIVERSITY EDUCATION

In Dewey decimal classification:

331 LABOUR ECONOMICS

332 FINANCIAL ECONOMICS

333 LAND ECONOMICS

The above headings have been arranged on the basis of notation used in the scheme of classification. The notation of both classification schemes mechanizes a preferred order. The catalogues which use notational symbols, as explained above, to arrange entries are called classified catalogues. The arrangement of above notation is a systematic one which is providing maximum degree of collocation. In order to get the best out of this type of catalogue depends greatly upon the qualities of the scheme of classification used.

5 Importance of the List of Subject Headings (LSH)

In almost every type of library, the most of the users retrieve the documents through their subjects. To accomplish such task, extensive provision is made to give adequate representation to subjects of documents, with a considerable number of cross-references, directing the user to the various aspects of a subject. In view of this, the List of Subject Headings (LSH) serves as the standard source for validation of subject headings assigned to individual cataloguing records. It helps to ensure that (i) the same heading is assigned to all works on the same subject, (ii) each heading represent only that particular subject, and (iii) all headings assigned to cataloguing records confirm to the established forms.

In an alphabetical subject catalogue, entries are made under the name of the specific subjects of documents. Specific subject entries are strictly arranged in an alphabetical order. The fundamental rule of entry in an alphabetical specific subject catalogue is to enter a work under its specific subject.

LSH offers a basic list that includes many of the headings most likely to be needed in the libraries together with patterns and examples that will guide the cataloguer in creating

Additional headings as needed. New titles require new subject headings. Headings for new topics can be developed from the LSH in two ways, by establishing new terms as needed and by subdividing the headings already in the List. Instructions for creating new headings based on the pattern in LSH and sources for establishing the wording of new headings are given in the Principles of LSH. The various kinds of subdivisions and the rules for their application are also discussed in the Principles of the LSH. It is only by being flexible and expandable that LSH has been able over the years to fill the needs of various kinds of libraries. The degree or level of specificity required for a collection depends entirely on the material being collected. While a library is unlikely to need very narrow topics of a technical or scientific nature, it is not at all unlikely that it might have a gardening book on **Irises**. That term is not in the List, but it would be added as a narrower term under **Flowers**.

6 Subject Heading

6.1 What is Subject Heading: Definition

Let us have definition of subject heading. The educationists and authorities of Library science have defined the subject heading in following manner:

According to Margaret Mann: The subject heading is the word or phrase used on catalogue cards to express the theme or topic of a book. *According to Maurice F. Tauber:* Word groups employed to express the subject contents of a document. It means subject heading is the statement of document expressing the specific subject dealt in the book. *According to H.D.Sharma:* The term subject heading denotes a word or word groups used in cataloguing, indexing or documentation to describe the subject contents of a book. It is a summary in miniature of the book. *Encyclopedia of Librarianship:* A word or group of words expressing a subject under which as heading ,entries of all works on that subject are filed in a catalogue or bibliography.

6.2 Methods of deriving subject headings

The main aim of the most of the users is to seek the documents or information on a particular subject. To meet such requirements, subject approach is very important in the access to and exploitation of documents in a library. For the purpose, the first and most important step in subject cataloguing is to ascertain the true subject of the material being catalogued. This concept should never be far from a subject cataloguer's thoughts. It is a

Serious mistake to think of subject analysis as a matter of sorting through material and fitting it into the available categories and determining what it is really about. The subject of a work cannot always be determined from the title alone, which is often uninformative or misleading, and undue dependence on it can result in error. Hence, we should examine the following consideration of subject approach for assigning a subject heading:

- (i) After reading the title page, the cataloguer should examine the table of contents and skim the preface and introduction
- (ii) If the subject is still not clear, examine the text carefully and read parts of it, if necessary.
- (iii) In the case of non-book materials, the cataloguer should examine the container, the label, any accompanying guides, etc., and view or listen to the contents if possible.
- (iv) If the meaning of technical terminology is not clearly understood, reference sources should be consulted.

After having made this preliminary examination we can determine the subject heading of a work.

The principle of specific and direct entry is fundamental in modern subject cataloguing. According to that rule a work is entered in the subject entry directly under the most specific subject heading that accurately represents its content. This term should be neither broader nor narrower but co-extensive in scope with the subject of the work catalogued. The principle was formulated by Charles A. Cutter (1837-1903) in his Rules for a Dictionary Catalog and he stated –Enter a work under its subject-heading, not under the heading of a class which includes that subject.¶

7 Printed List of Subject Headings

For consistency and uniformity in subject headings for books or parts of books of the same subject, there should be some specific code or a carefully worked out list of subject headings for guidance so that standard and appropriate heading may be used. Such long felt need of standardized and experimented subject headings was fulfilled by Library of Congress. Such list is a list of the authorized words and phrases is being maintained by the library of Congress for assigning a subject headings of its collections

Is called as subject authority file. It consists of subject authority records in order to ensure uniformity and consistency in subject heading terminology and cross –references. The subject authority record is made when subject headings are established and used for the first time. To create subject authority records and to maintain the subject authority file is so called subject authority control.

7.1 Principles for Subject Headings (LSH)

To achieve good practice in assigning headings, it is important to understand the following principles involved in formulating subject headings.

7.1.1 *Literary warrant:* The terminology selected to formulate individual subject heading which is created for use in cataloguing should reflect the terminology used in current literature

7.1.2 *Uniform heading:* Subject heading is chosen to represent **topic** based on standard, contemporary English-language usage or preference given to terms in general use over technical terms or jargon where possible. In other words, Subject headings should be chosen neutral, inclusive, or unbiased terminology, especially regarding topics that might be controversial .References to headings are made from synonyms and variant forms. Catalogue users are guided from their entry vocabulary to the authorized headings

7.1.3 *Unique heading:* Each heading in LSH represents only one **topic**. If a term could represent more than one concept, it should be modified, viz. *Venus (Planet) Stilts*; *Venus (Roman deity) Stilts (Birds)* or, a [heading]—[subdivision] combination is created to provide context. In cases where a deliberate decision is made to allow a heading to represent more than one concept, a scope note is generally provided.

7.1.4 *Specific entry:* Each subject is represented by the most precise term naming the subject, rather than a broader or generic term that encompasses it .For a work on systems librarians, use: **Systems librarians** *not* Librarians. In other words, Terms should be co-extensive with subjects. Exceptionally some terms may be deemed too narrow, and therefore not likely to be sought by user's .For example, *Bait fishing* is an authorized heading in *LCSH* Worm fishing is a specific type of bait fishing, but the heading **Bait fishing** is used to represent it.

7.1.5 *Consistency:* LSHs contain numerous inconsistencies in styles of headings in its various editions. Attempts have been made to maintain consistency in form and structure among similar headings because. Individual headings, unless they have been

Revised, reflect the prevailing philosophy in force at the time they were created. Consistency in the form and structure of headings promotes predictability for subject heading users. Predictability is enhanced when the terms chosen for a topic are those most widely used to refer to that topic. When headings are changed or new headings established, headings in bibliographic records need to be updated.

7.1.6 Dynamism: Changes to headings are made continuously to maintain the currency and viability of LSH. The benefit of making a change is weighed against its impact on the authority and bibliographic databases and the resources needed to carry it out. For example, Handicapped to *People with disabilities*; Internet (Computer network) to *Internet*; Machine-readable dictionaries to *Electronic dictionaries*; Medicine, State to *National health services*.

7.1.7 Pre-coordination and post-coordination: LSH is primarily a pre-coordinate system; combining elements into one heading string in anticipation of a search on that compound topic. For example, *Furniture design—France—History—20th century—Exhibitions*. Many complex or multi-element topics require post-coordination in LSH; combining of headings or keywords by a searcher at the time he/she looks for materials. For example, for a work on the architecture of Roman public baths in Great Britain: *Baths, Roman—Great Britain* or *Architecture, Roman—Great Britain* or *Great Britain—Antiquities, Roman*

7.2 Types of List of Subject Headings

For standardized guide to the subject content of a book by giving it a heading, Crestadoro was the first who stated this concept in his book ‘The Art of Making Catalogues’. In 1895, the first standard list entitled ‘List of Subject Headings for Use in Dictionary Catalogue’, produced by a Committee, of the American Library Association (ALA), of which C.A.Cutter was prominent member, was based on Cutter’s principles. After three editions of it (1895, 1898 and 1911), it had been discontinued when Library of Congress began publishing its list under the title ‘subject headings used in the Dictionary Catalogues of the Library of Congress’. At present, two standardised lists of subject headings are famous in practice namely ‘Library of Congress Subject Headings’ (LCSH) and ‘Sears List of Subject Headings’.

8 Library of Congress Subject Headings (LCSH)

8.1 History

Library of Congress Subject Headings (**LCSH**) is a list of the headings for subject cataloguing and indexing established at the Library of Congress which has been publishing since 1898. LC used the American Library Association's List of Subject Headings for Use in Dictionary Catalogues (1st ed., 1895; 2nd ed., 1898). LC began distribution of printed catalogue cards to subscribers in 1902. Library of Congress published a preliminary list of subject subdivisions for place names and of subjects in 1906. As a result, the first actual printing of Subject Headings Used in the Dictionary Catalogues of the Library of Congress began in the summer of 1909, which was then entitled as Library of Congress Subject Headings issued in parts and completed in March 1914. The 5th LCSH (1948) incorporated the –refer from|| references in the main list. LC had been publishing supplements on a quarterly basis from time to time. LCSH printed in Cataloguing Service Bulletin which continued and increased from the 1950's to the present day. In 1957 the 6th edition of LCSH was published with three columns of subject headings per page, a format which would remain constant through to 1999.

Another development of the latter half of the 20th century were the –uniterms|| (later called –descriptors||) designed for coordinate indexing via machine manipulation, a proliferation of keyword indexes (KWIC, KWOC, etc.) ,PRECIS and Boolean search techniques utilized in most online public catalogues (OPACs). Thesauri became popular during the same period. More technical changes occurred in the 1970's. The 8th LCSH (1975) was published in two volumes and adopted its modern title, Library of Congress Subject Headings. In 1976, the Library of Congress offered the list in a microfiche version for the first time that had converted to or were planning for COM (computer-output microform) catalogues. In the 1980's and 1990's the emphasis shifted to enhancing, rather than eliminating, the LCSH access, e.g., through mapping to other vocabularies or linking to classification numbers. Weekly Lists of new and changed subject headings and references were first offered in 1984. In 1985 the Library of Congress began to regularize its practices regarding the provision of cross-references for new subject headings.

The LCSH converted its notation devices to those most often used in thesaurus construction, i.e., BT for –broader term,|| NT for –narrower term,|| and so forth.

The late 1980's also saw the introduction of two new formats for LCSH: one was the CDMARC Subjects for use on personal computers with CD ROM drives; the other was the Subject Authorities in MARC format issued on magnetic tape (later also available via FTP transfer).

The latter product enabled bibliographic utilities such as OCLC and RLIN to load the LCSH authorities in their databases and make searching of them available to their member libraries.

LCSH continued to grow and its 11th ed. expanded into three volumes since 1988 on an annual basis.

The 1990's ushered in a new era of cooperation. In May 1991, LC hosted an invitational Subject Subdivisions Conference, which resulted in many changes to LCSH, still ongoing and regularly summarized in Cataloguing Service Bulletin. One more significant has been the development, under the auspices of the Program for Cooperative Cataloguing, of the Subject Authority Cooperative Program (SACO). The SACO process allows specially-trained –outside|| cataloguers to propose new subject headings based on their libraries' new acquisitions or their users' needs. LCSH list grew to four volumes by 1992, and reached five volumes beginning with the 21st ed. (1998) and onwards. The printed **Library of Congress Subject Headings (Red Books)** is being published annually.

LCSH is the best way to keep subject headings current--the key to accurate cataloging and topical searching. The 34th edition of LCSH in 6 volumes published in 2012 is indispensable. It contains approximately 329,000 total subject headings and references, including approximately 8000 new headings. It includes all authorized forms of headings as well as variant references created by catalogers and used in cataloging at the Library of Congress through March 2012 to provide users with all the authoritative access points to make subject searching quick and easy.

8.2 Structure

Main headings are identified by terms or phrases that represent what the material covers. Headings can also reflect the form of the material. There are three general categories of headings: Topical, Form/genre and Names

8.2.1 Topical headings: A topical heading represents a discrete, identifiable concept. These can be things, concepts, philosophies, disciplines, activities and processes, organisms and **some** types of events, classes of people, ethnic groups, names of individual animals, legendary and fictitious characters, places, and organizations

8.2.2 Form / Genre: Form / Genre headings indicate what a work is, rather than what it is about. These headings can **identify** a form and **represent** a style or mood

8.2.3 Name headings: If the work being catalogued is about a person or a place or a corporate entity, then a name heading is appropriate. The rules for constructing these headings will depend on the type of name. Personal names: A biography will have a subject heading for the biographer. Personal name headings are constructed according to AACR2/LCRI practice. Family names and royal houses and dynasties are coded as personal names, but they are constructed according to subject cataloguing rules

8.2.4 Corporate names: Generally, a corporate body is an organization or a group of persons identified by a particular name. Certain vessels and vehicles are considered to be corporate bodies. Corporate name headings are constructed according to AACR2/LCRI practice. Works about conferences and organized events can have subject headings for the name of the conference or event.

8.2.5 Geographic names: Headings can be assigned for jurisdictional areas and geographic features. If a place name used as a subject has uniform title or a subordinate body, it is considered a corporate name.

8.2.6 Titles: Works about other works may have subject headings that consist of the catalogue entry for the work being discussed. □ name-title heading □ uniform title heading

8.3 Subdivisions

Subdivisions are used to combine various aspects of a topic into one heading, and as a device for arranging entries that share the same main heading. Following subdivisions are used to combine various aspects of a topic into one heading, and as a device for arranging entries that share the same main heading.

8.3.1 Topical subdivisions: They indicate a part, element, or aspect of a subject. They are used under main headings of all types or under other topical subdivisions to limit the concept expressed by the heading to a specific subtopic: **Construction industry—Management**. Each additional subdivision refines the concept expressed by the heading and makes it more specific: **Construction industry--Management--Employee participation**. Many common topical subdivisions represent actions, processes, or attributes. In some cases, particularly with headings for objects, subdivisions are used to designate parts of the whole for example, **Airplanes--Cockpits**. LCSH makes use of topical subdivisions as a standard way of expressing concepts, methods, or techniques that are common to several fields, or that may be applied to numerous headings: **Data processing;--Library resources;--Psychological aspects;--Social aspects;--Statistical methods**

8.3.2 Geographical subdivisions: They indicate the geographic area to which treatment of a topic is limited. They may indicate where something is located, where something is from, or either, depending upon the topic. For instance: **Income tax (May Subd. Geog)**. Headings with **(May Subd Geog)** may be subdivided by authorized forms of names of countries or other political jurisdictions, or of regions or geographic features, as appropriate: **Income tax—Brazil; Water quality--Amazon River**. For a locality within a country, or a territorial entity or geographic feature that falls wholly within a country, interpose the name of the relevant country between the topic and the locality: **Subways--Korea (South)--Seoul; Stone carving--Cambodia--Angkor (Extinct city)**. For localities in Canada, Great Britain, and the United States, interpose the relevant province, constituent country, or state. In some cases and with some topics, headings are established with national qualifiers to indicate origin or derivation: **Technical assistance, American (May Subd Geog)**. Such headings may be divided by place to indicate recipients: **Economic assistance, Scandinavian—Africa**(For Scandinavian development agreements with African).

8.3.3 Chronological subdivisions: Subdivisions for dates are used to indicate time periods covered in the contents of a work with the interposition of the subdivision -- **History**. For instance: **Japan--History--Tokugawa period, 1600-1868; United States--History--Civil War, 1861-1865; Women--History--Modern period, 1600-**. Under topics, inherently historical, periods are established directly without the interposition of the subdivision History: **Argentina--Economic conditions--1945-1983; World politics--1919-1932; Russia--Social conditions--1801-1917; Japan--Politics and**

government--1600-1868. Date subdivisions established or used under artistic, literary, or music form/genre headings modify the main heading: **Engraving--18th century ; French poetry-- 19th century ; Sonatas (Piano)--20th century.** Sometimes chronology is indicated by a heading with an adjectival qualifier, for example, **Medicine, Medieval.**

8.3.4 Form subdivisions; Indicate the format of the work: what the item is rather than what it is about. Generally, form subdivisions may be used under all types of headings: topics, names of persons, corporate bodies, places, etc., unless restrictions on the use of a particular subdivision are given in the Subject Cataloguing Manual. Some frequently used form subdivisions are: **Engineering--Indexes; Sociology--Congresses; Malaysia--Foreign relations--Bibliography; Vegetable gardening--Handbooks, manuals,etc.;Porcelain,Chinese--Catalogues; Singapore--Guidebooks; Sports--Juvenile humor; Brewing--Amateurs' manuals; Astronomy--Observers' manuals**

9 Sears List of Subject Headings

9.1 History

Sears List of Subject Headings (**SLSH**) was first designed in 1923 by Minnie Earl Sears (1873-1933) and published as first edition in 1923 in the title of *List of Subject Headings for Small Libraries* based on the headings used by nine small libraries of the USA. Minnie Sears used only **See** and **“refer from”** references in the first edition. In the second edition (1926) she added **See also** references. To make the List more useful for that purpose, she wrote a chapter on *Practical Suggestions for the Beginner in Subject Heading Work* for the third edition (1933). Isabel Stevenson Monro edited the fourth (1939) and fifth (1944) editions with the inclusion of Dewey Decimal Classification numbers. The sixth (1950), seventh (1954), and eighth (1959) editions were prepared by Bertha M. Frick.

In recognition of the pioneering and fundamental contribution made by Minnie Sears the title was changed to *Sears List of Subject Headings* with the sixth edition. The phrase *for Small Libraries* was deleted from the title. The symbols x and xx were substituted for the *Refer from (see ref.)* and *Refer from (see also ref.)* phrases to conform to the format adopted by the Library of Congress. The ninth edition (1965) continued the

policies of the earlier editions. With the eleventh edition, the –Practical Suggestions for the Beginner in Subject Heading Work|| was retitled –Principles of the Sears List of Subject Headings|| to emphasize –principles,|| and a section dealing with nonbook materials was added. The thirteenth edition (1986) prepared by Carmen Rovira and Caroline Reyes responded to the computer validation capabilities and online public access catalogues. This effort was taken further in the fourteenth edition (1991) under the editorship of Martha T. Mooney, who reduced the number of compound terms, simplified many subdivisions, and advanced the work of uninverting inverted headings and incorporation of Subject Headings for Children’s Literature. The fifteenth edition (1994) edited by Joseph Miller was shortened to provide a more timely updating of subject headings. Sears remains a list of subject headings and not a true thesaurus, it uses the labels BT, NT, RT, SA, and UF for broader terms, narrower terms, related terms, See Also, and Used for respectively. It also included new headings for access to individual works of fiction, poetry, drama, and other imaginative works, such as films and radio and television programs. In the sixteenth edition (1997) further instructions were added for the application of subdivisions. The major feature of the seventeenth edition (2000) was the revision of the headings for the native peoples of the Western Hemisphere. The headings **Indians**, **Indians of North America**, **Indians of Mexico**, etc., were cancelled in favor of **Native Americans**, which may be subdivided geographically by continent, region, country, state, or city. Many headings that formerly incorporated the word –modern|| were simplified and clarified, such as **Modern history** and **Modern art**, and headings for various kinds of government policy were revised and regularized. The eighteenth edition of the Sears List (2004) included significant addition to the Principles of the Sears List regarding the treatment of individual works of fiction, drama, and poetry. The 20th edition (2010) incorporated many hundreds of new subject headings and features a major development of new headings in the areas of Islam and Graphic novels

The major feature of twentieth edition of the Sears List is the inclusion of more than three hundred new subject headings such as **Rainforest ecology**, **Grassland ecology**, **Climate change**, and **Sustainable agriculture**, various kinds of dinosaurs like **Raptorex**, **Pteranodon**, and **Edmontosaurus**, social networking such as **Twitter (Web**

site) and **Facebook (Web site)** , **Acrylic painting** and **Wire craft**. In these and other areas many provisions have been added for creating more new headings as needed.

The most significant revision in this edition was dealt with subject headings relating to Russia and India. Where materials on Russia were formerly separated among three headings: **Russia**, **Soviet Union**, and **Russia (Federation)**, there is now a single heading, simply **Russia**. The heading for the **Commonwealth of Independent States**, which no longer exists, has been canceled. It was in the seventeenth edition of the Sears List (2000) that the headings **Indians**, **Indians of North America**, **Indians of Mexico**, etc., were canceled in favor of **Native Americans**, which may be subdivided geographically by continent, region, country, state, or city. Further headings were added as a pattern for headings relating to Native American, such as **Native American women**, **Native American music**, etc. In this edition the heading **Indians** has been re-established to denote the people of India, replacing **East Indians**, and a number of headings relating to the literature and culture of India have been similarly established, such as **Indian literature** and **Indian music**, replacing **Indic literature**, etc. New chronological subdivisions have been established for the history of India as well. This revision reflects the increasing globalization of our culture and the international use of the Sears List in library cataloguing. Another revision in this edition is the addition of more than 1,400 notes indicating that headings may be subdivided geographically. Additional scope notes have also been added in this edition so that now every heading in the List that may be used for individual works and collections as well as for materials about a topic, such as **Picture dictionaries**, is so identified. This note indicates that in cataloguing a heading can be coded as a form or genre heading rather than as a topical subject.

9.2 Types of Subject Headings

In Sears List of Subject Headings there are four types of subject headings: topical headings, form headings, geographic headings, and proper names.

9.2.1 Topical headings: Topical subject headings are simply the words or phrases for common things or concepts that represent the content of various works. In choosing the word or phrase that makes the best subject heading several things should be considered. The first and most obvious is the literary warrant, or the language of the material being catalogued. For instance,(i) the word most commonly used in the literature is most likely

the word that best represents the item catalogued,(ii) a subject heading should represent the common usage of the English language, and (iii) uniformity in subject headings should be maintained by choosing a single word or phrase from among its synonyms or near-synonyms in establishing a subject heading.

9.2.2 Form headings: Form heading describes not the subject content of a work but its form. In other words, a form heading tells us not what a work is about but what it is. Form in this context means the intellectual form of the materials rather than the physical form of the item. Some form headings are as follows:

- (i) The general arrangement of the material and the purpose of the work, such as **Almanacs, Atlases, Directories, and Gazetteers**.
- (ii) Headings for the major literary forms, **Fiction, Poetry, Drama, and Essays**, are usually used as topical subject headings. As form headings they are used for collections only rather than for individual literary works. Minor literary forms, also known as genres, such as **Science fiction, Epistolary poetry, and Children's plays**, are much more numerous and are often assigned to individual literary works.
- (iii) Physical forms of some non-book materials, such as puzzles, sound recordings, or comedy films are also identified by form headings.

9.2.3 Geographic headings: The geographic headings found in Sears, such as **United States, Ohio, and Chicago (Ill.)**, are only as examples. The cataloguer using the Sears List must establish geographic headings as needed with the aid of above standard references sources. The geographic headings and geographic subdivisions found in Sears follow the form of abbreviation for qualifying states, provinces, etc.

9.2.4 Names: Three major types of name headings are personal names, corporate names, and uniform titles. Individual or personal name headings are usually established in the inverted form, with dates if necessary, and with *See* references from alternate forms. For example:

Personal name: **Clinton, Bill, 1946-** would require a *See* reference from Clinton, William Jefferson. Corporate: **Rockefeller Center** or **Fort Lauderdale International Boat Show** are entered directly under the corporate name heading as a subject. Uniform titles: Established names of sacred scriptures, anonymous literary works, periodicals, motion pictures, radio and television programs, etc. are entered directly under the

uniform title. For example: Motion picture such as **Gone with the wind (Motion picture)** or **Beowulf**, literary work such as **Shakespeare, William, 1564-1616. Hamlet** for a book about Shakespeare's play.

Like geographic headings, name headings are numerous beyond the scope of the Sears List and must be established by the cataloguer as needed. Suggested sources for personal and corporate names are *Who's Who*; *Who's Who in America*; *Merriam-Webster's Biographical Dictionary*; *The Dictionary of National Biography*; the *Encyclopedia of Associations*; and the Library of Congress Name Authorities on the Web. General encyclopedias and standard reference works limited to specific fields are also useful sources for names.

9.3 Forms of Headings: The Grammar of Subject Headings

In order to construct subject headings consistently the cataloguer should understand the grammar of subject headings. In Sears List of Subject Headings, the forms of headings are **Single Nouns**, **Compound Headings**, **Adjectives with Nouns**, **Phrase Headings**.

9.3.1 Single Nouns: Abstract ideas and the names of disciplines of study are usually stated in the singular, such as **Biology** or **Existentialism**. An action is also expressed in the singular such as **Editing** or **Fraud**. Headings for concrete things to be counted are most commonly in the plural form such as **Playgrounds** or **Children**. Concrete things that cannot be counted, such as **Steel** or **Milk**, obviously remain in the singular

9.3.2 Compound Headings: Subject headings that consist of two nouns/things joined/linked by -and are of several types. Some headings link two things because together they form a single concept or topic, such as **Bow and arrow** or **Good and evil**. Some headings are so closely related they are rarely treated separately, such as **Forests and forestry** or **Publishers and publishing**. Some headings are so closely synonymous they are seldom distinguished, such as **Cities and towns** or **Rugs and carpets**. Other headings that link two words with -and stand for the relationship between the two things, such as **Church and state** or **Television and children**.

9.3.3 Adjectives with Nouns: Subject headings are expressed by a noun with an adjective, such as **Unemployment insurance** or **Buddhist art**. In the past the expression was frequently inverted (Insurance, Unemployment; Art, Buddhist). There were two possible reasons for inversion: 1) an assumption was made that the searcher

would think first of the noun; or 2) the noun was placed first in order to keep all aspects of a broad subject together in an alphabetical listing, as in a card catalogue. In recent years these arguments have been abandoned in favor of the direct order because users have become more and more accustomed to searching in the order of natural language. The only headings that have been retained in Sears in the inverted form are proper names, including the names of battles and massacres.

9.3.4 Phrase Headings: Some concepts that involve two or more elements can be expressed only by more or less complex phrases. These are the least satisfactory headings, as they offer the greatest variation in wording, are often the longest, and may not be thought of readily by either the maker or the user of the catalogue, but for many topics the English language seems to offer no more compact terminology. Examples are **Insects as carriers of disease** and **Violence in popular culture**.

9.4 SUBDIVISIONS

Instruction is given for the use of subdivisions included in the Sears' List. Subdivisions are as follows:

9.4.1 Topical Subdivisions: Topical subdivisions are those subdivisions that bring out the aspect of a subject or point of view presented in a particular work. For example: For a work of a history of the subject, such as **Clothing and dress—History; Religion—Philosophy; Oceanography—Research; Automobiles—Law and legislation; Mathematics—Study and teaching**.

9.4.2 Geographic Subdivisions: Another aspect of subjects that can be brought out in subdivisions is geographic specificity. The unit used as a subdivision may be the name of a country, state, city, or other geographic area. Geographic subdivisions can be either direct or indirect. The Sears List uses the direct form of subdivision, whereby topics are subdivided directly by cities, counties, metropolitan areas, etc. For example: **Bridges—France; Agriculture—Ohio; Italian art—Great Britain ; American authors—Paris (France); Theater—Paris (France) ; Hospitals—Chicago (Ill.)**.

There are only two types of topical subject headings that can never be subdivided geographically. The first are those headings, such as **Exploration** or **Church history**, that are used instead as subdivisions under geographic headings, as in **Arctic regions—Exploration** or **United States—Church history**. The second are those subjects, mostly in the fields of literature and the arts, for which the geographic qualification is conveyed by a modifying adjective rather than by a subdivision. Many of these subjects have a

general reference similar to this reference at the subject **Authors: -SA** [See also] authors of particular countries or regions, e.g. **American authors.**||

9.4.3 Chronological Subdivisions: Chronological subdivisions, which correspond to generally accepted periods of a country's history or to the spans of time most frequently treated in the literature, make such a search much simpler by bringing together all works on a single period of history, such as **United States—History; United States—History—1945-1953 ; United States—History—1600-1775, Colonial period.** The Sears List includes chronological subdivisions only for those countries about which a small library is likely to have much historical material, with the greatest number of period subdivisions under **United States, Canada, Great Britain, France, Germany,** and **Italy**, and a few subdivisions only under several other countries. For other countries, the above subject headings to be followed.

9.4.4 Form Subdivisions: Form headings tell what an item is rather than what it is about. Some of the most common form subdivisions are *Bibliography; Catalogues; Dictionaries; Directories; Gazetteers; Handbooks, manuals, etc.; Indexes; Maps; Pictorial works; Portraits; Registers;* and *Statistics.* Form subdivisions are particularly valuable under headings for the large fields of knowledge that are represented by many entries in a library's catalogue. In applying form subdivisions the cataloguer should be guided by the character of an item itself, not by the title.

For example: **Children's literature— Bibliography** or **Geology—Maps**

9.5 Complication in the Application of Some Areas

In many areas the application of subject headings and their appropriate subdivisions is a simple and straightforward matter. There are, however, areas in which either the complexity of the material or the vagaries of the English language create persistent problems. By maintaining sound principles, following instructions carefully, and using common sense to catalogue library materials in such a way that users can find what they need. Some of these problem areas are dealt with here.

9.5.1 Biography: Biography as a form of writing are given the topical subject heading **Biography as a literary form.** Works that are themselves biographies are given either the form heading **Biography** or the form subdivision *Biography.* Such works are considered here in two groups, collective biographies and individual biographies.

9.5.1.1 Collective Biographies: Collective biographies are works containing biographies of more than three persons. Collective biographies not limited to any area or to any class of persons. For example: *Lives of Famous Men and Women* assigned the heading as **Biography**. *Leaders of the Arab World* assigned the heading as **Arab countries—Biography**, *Dictionary of American Biography* assigned the heading as **United States—Biography**; *Who's Who among Hispanic Americans* assigned the heading as **Hispanic Americans—Biography**; *Dictionary of American Biography* or *Who's Who in America* **United States—Biography—Dictionaries**. Class of persons or occupational group with the subdivision *Biography*, such as **Women—Biography** or **Librarians—Biography**. Any or all persons connected with a particular industry, institution, or field of endeavor, such as **Computer industry—Biography**; **Catholic Church—Biography**; **Baseball—Biography**.

9.5.1.2 Individual Biographies: Usually the only subject heading needed for the life of an individual is the name of the person, established in the same way as an author entry. Subdivisions are added to the person's name to specify the various aspects treated, among them *Biography*. As examples of such persons, the Sears List includes **Jesus Christ** and **Shakespeare, William, 1564-1616**, with subdivisions appropriate to material written about them. The subdivisions listed under Shakespeare may also be used, if needed, under the name of any voluminous author.

The subdivisions provided under **Presidents— United States** may also be used under the name of any president or other ruler, if applicable.

9.5.2 Literature: A work about the history of poetry or about the criticism of poetry would be entered under **Poetry—History and criticism**. Form subdivisions may also be used under these headings to indicate the form the work takes, such as **Drama—Dictionaries** or **Poetry—Indexes**. The second consists of literary works themselves, and those works are assigned form headings to describe what the item is rather than what it is about, such as **Literature—Collections**; **Poetry— Collections**; or **Drama—Collections**. Genre headings with national or linguistic adjectives, such as **Australian science fiction** or **Latin epic poetry**, are applicable to collections but are never assigned to individual works.

9.5.3 Nonbook Materials: Subject headings for electronic media and for audiovisual and special instructional materials should be assigned on the basis of same principles that are applied to books. The uniform application of the same headings to book and

nonbook materials alike is especially important in an integrated catalogue, which brings all materials on one subject together regardless of format. There are many form and genre headings that apply equally to nonbook materials and to books about such materials, such as **Biographical films; Comedy television programs; and Science fiction comic books, strips, etc.** Topical subject headings assigned to nonbook materials should not include form subdivisions to describe physical format, such as motion pictures, slides, sound recordings, etc.

10 Making References

References direct the user from terms not used as headings to the term that is used, and from BT and RT to the term chosen to represent a given subject. The Sears/LC Lists use the symbols found in most thesauri to point out the relationships among the terms found in the List and to assist the cataloguer in establishing appropriate references in the public catalogue based upon these relationships. There are three types of references: *See* references, *See also* references, and general references.

10.1 *See References:* *See* references direct the user from unpreferred or unestablished terms and phrases to the preferred or established terms that are used as subject headings. Under most headings in the Sears/LC Lists, following the UF [Used for] label is one or more suggested terms for *See* references in the public catalogue. A cataloguer may want to use some or all of them as references, and many cataloguers add other *See* references they deem useful. The references will be more useful if the cataloguer considers materials from the reader's point of view. The reader's profile depends on age, background, education, occupation, and geographical location, and takes into account the type of library, such as school, public, university, or special.

10.2 *See also References:* *See also* references direct the user from one established heading to another established heading. Under most headings in the Sears List, following the BT [Broader term] label, is a term that is broader in scope than the heading itself. A *See also* reference is made from a broader term to a narrower term, but not from a narrower term to a broader term. For example: the broader term **Clothing and dress** on the heading **Gloves**. When the heading **Gloves** is assigned for the first time to a work in the collection, a reference is made at **Clothing and dress** –See also

Gloves.|| If **Clothing and dress** has never been assigned to a work in the collection, it is entered in the catalogue for the sake of the reference, and the reference –See also **Gloves**|| is made.

Under many headings in the Sears List, following the RT [Related term] label, one or more terms are listed that represent similar or associated subjects. These RT are neither broader nor narrower than the main term but roughly equal in specificity. The term **Pardon**, for example, is related to **Amnesty**. When the term **Pardon** is assigned for the first time to a work in the collection, a reference is made in the catalogue at **Amnesty** –See also **Pardon**.|| The reciprocal reference at **Pardon** –See also **Amnesty**” is also made, but only if **Amnesty** has also been assigned to a work in the collection.

10.3 General References: The SA [See also] label is called a general reference, not to a specific heading but to a general group or category of things that may be established as headings as needed. In the example of **Clothing and dress** given above, the general reference is to –types of clothing articles and accessories, {to be added as needed}.|| This reference is addressed to the cataloguer as a reminder not to be limited to the types of clothing and dress items given as examples in the List—**Hats, Hosiery, Shoes**, etc.—but to create a heading for any other clothing item, such as **Gloves**, when the need arises. A second function of general references is to provide instruction in the application of subdivisions. If the subdivision is also a heading, the general reference is given under the heading. For example: **Folklore** is both a heading and a subdivision. Under the heading **Folklore** the general reference reads: –SA [See also] topics as themes in folklore with the subdivision *Folklore*, e.g. **Plants Folklore**. There is a general reference that reads: –USE types of scientific phenomena, chemicals, plants, and crops with the subdivision *Industrial applications*, e.g. **Ultrasonic waves—Industrial applications** {to be added as needed}.|| At **Flowers**, for example, rather than a specific *See also* reference to **Day lilies, Orchids, Peonies, Poppies, Roses, Tulips, and Violets**, there would be a general reference –See also types of flowers.||

11. Maintaining a catalogue

The library catalogue is a vital function at the very center of a library, and as such it is always growing and changing to reflect the growing collection and to meet the changing needs of the users. It is a challenge to the cataloguer to add new records, revise

existing records, and make all the appropriate references, and at the same time maintain the integrity of the catalogue.

5. Questions
6. Further Readings

1. Introduction

Subject approach is the most important approach of the library clients. This approach is served in dictionary catalogue by preparing subject entries with the help of printed list of subject headings i.e. L.C. List of Subject Headings or Sears' List of Subject Headings, which have been discussed in Module 6. In

Classified catalogue subject entries are prepared according to Chain Procedure devised by S.R. Ranganathan. In this module Chain procedure, POPSI and PRECIS are discussed.

2. Chain Procedure

2.1 Definition

The unique concept of Chain Procedure was first expounded by Ranganathan, a staunch supporter of subject approach, in his Theory of library catalogue in 1938. “It is the digit by digit translation of the class number, assigned to a document, into ordinary language”. It means each class number is analyzed as a series of links i.e. steps of division from the main class to the specific subject. Out of this analysis, sought links are used as the headings of class index entries beginning from the last step. Ranganathan has defined it as a “procedure for deriving subject word entry from a class number, in a more or less mechanical way”. Once a person understands the technique of Chain Procedure he can draw it smoothly and almost mechanically. Chain Indexing or Chain Procedure as it is popularly known as defined by Batty C David is “a method of deriving alphabetical subject index entries in a semi automatic fashion from the chain of successive subdivisions that leads from a general level to the most specific level needed to be indexed. It may be used to provide indexes not only to classification schemes and classified catalogues, but also to all other systematically organized indexes, even when they are arranged alphabetically. The chain is nearly always, but not necessarily, taken from a classification scheme in use, and the method is intended to offer general as well as specific access to all information and thus to avoid for arbitrary decisions by the indexer as to how a subject may be approached through the catalogue”. It is a “Semi mechanical method of producing the requisite subject index entries for a classified catalogue based on analysis of the classification symbol of each subject”. E J Coates has defined it as a method, first propounded by Ranganathan, for constructing subject index entries, without permutation of components, by citing terms contained in particular chains.

2.2 Functions

A Thirmalaimuthuswamy has enumerated the following functions of Chain Procedure:

- (a) To derive the subject word headings to serve as an unfailing index to the arrangement of subjects in the classified part of the catalogue.
- (b) To display many of those relations between the component parts of a specific subject which are not displayed by the classified sequences; and
- (c) To provide the required alphabetic subject index key to find out the class number of a particular subject for consulting the classified part.

2.3 Pre-requisites

The Chain Procedure works successfully and efficiently on the following conditions:

- (a) The book must be classified first and catalogued later. It means that a book would be read technically by the classifier and not by the cataloguer;
- (b) The class number allotted to the book should be co-extensive i.e it should represent the specific subject of the book, through a proper befitting class number;
- (c) Classification scheme adopted for classification of documents should be well-modulated. Though faceted classification scheme is more appropriate for deriving chain, however it is not impossible in case of enumerative scheme of classifications; and
- (d) The terms denoting the class number should be general and currently in use.

2.4 Method of Chain Procedure

First of all the links are derived from the digits of the class number i.e first link out of the first digit, the second digit out of the first two digits, the third link out of the first three digits, and so on, upto the last link which is to be made of

all digits. Secondly they will be written one below the other in succession and against each link is written its translation into natural language. While translating into natural language, we can use only those terms which are given in the classification schedule. This is done to achieve consistency and uniformity. After putting the natural language, these links are connected with the sign equal (=). Thirdly, this sign of each link is connected with the next succeeding link by a downward arrow. Putting the sign of arrow is merely to make the chain visible to the eye. For example, the class number O111, 1M88, 1 for „The Wasteland“ by T S Eliot, the following links will be drawn:

O	↓	=	Literature
O1	↓	=	Indo-European Literature
O11	↓	=	Teutonic Literature
O111	↓	=	English Literature
O111,	↓	=	Connecting symbol of Personality
O111,1		=	English Poetry
O111,1M	↓	=	English Poetry of Poets born in 1800“s
O111,1M8	↓	=	English Poetry of Poets born in 1880“s
O111,1M88	↓	=	English poetry of Poet born in 1888 <u>i</u> e Eliot
O111,1M88,↓		=	Connecting symbol of Personality Facet
O111,1M88,1↓		=	The Wasteland by T S Eliot

After the links are drawn, the next step is to select the false, unsought and sought links. If the link ends with a connecting symbol or a signature symbol or Time Isolate representing Time Facet of the class, is called as false link. There can be some unsought links in the chain. The decision of a link whether sought or unsought is arbitrary. It depends upon the library which may define it in the light of the reading materials organized, the interest of the readers served and the nature of the service attempted. All remaining links which are neither false nor unsought are known as sought links. These are used for giving subject headings in the class index entries of the alphabetical part of the classified catalogue. In

the above example, there are 11 links. But only 1,4,6,9 and 11 are significant or sought links, number 2 and 3 are unsought and 5,7,8 and 10 are false links. The sought links are written from the last link. They are denoted by the terms used in the schedule of classification. They are illustrated below:

- | | | |
|---|--------------------------------|-------------|
| 1 | WASTELAND, ELIOT (T S) (1888). | O111,1M88,1 |
| 2 | ELIOT (T S) (1888), POETRY. | O111,1M88 |
| 3 | POETRY, ENGLISH. | O111,1 |
| 4 | ENGLISH, LITERATURE. | O111 |
| 5 | LITERATURE. | O |

At every progressive step in the chain, the right hand digit is left and the index term is in each case, the term which is denoted by the new last digit.

2.5 Class Index Entries

After determining the sought links, the next step is to prepare class index entries. In the above case, we have to prepare 5 class index entries derived from the class number O111,1M88,1. One class index entry is illustrated below:

	WAS	ELAND, ELIOT (T S) (1888).
		For documents in this Class and its Sub-divisions, see the Classified Part of the catalogue under the Class Number O111,1M88,1

On the same pattern the remaining 4 more class index entries will be prepared. There is no difficulty in preparing these index entries after determining the sought headings. In the case of a Commission /Committee

Report, two entries are prepared from the last link using as heading each of the following:

- (a) The words in the heading of the Main Entry (omitting the information about the Chairman of the Commission/Committee), as Main Heading; and the term, such as „Report“ forming the title, as Subheading; and
- (b) The word-group consisting of the entry element in the name of the Chairman followed by the word „Commission“ or its equivalent and the year used in the Main Entry as the individualizing element, as Main Heading; and the term, such as „Report“, forming the title, as Subheading.

2.6 Advantages of Chain Procedure

1. Economical method: Chain procedure is an economical method. This economy is of 2 types:

- (a) Chain procedure saves the time for compiling and publishing huge subject heading lists, which, even when complete, do not suit the needs of every library, and cataloguers have to mutilate and adopt these according to their needs.
- (b) It is a very economical method of arriving at subject headings. Cataloguer's time is saved a lot as he need not search the specific subject of the book. Economy in the number of entries may also be secured. According to Coates, "Chain procedure is substantially more economical than other possible systems because it eliminates permutation of components, so that for any particular compound subject, the saving is a question of the ratio between the sum of the components and their factorials. For terms of one or two components there is no saving; for terms of three components (six permutations) there is a 50 per cent saving in number of entries required; for terms of four components (twenty four possible permutations) there is a saving of 83.33 per cent, and for longer compounds the economy is even greater".

2. Mechanical nature: The second claim made on behalf of the chain procedure is that it provides a simple mechanical way. In lists of subject headings, the cataloguer has to use his knowledge and discretion to finalize

the number of entries to be prepared for a specific title. But chain procedure is just like „Indian Magic“. One reached the relevant link and the subject heading is ready. Only you have to use your judgement whether the subject heading is sought or unsought.

3. **Uniformity and accuracy:** The chain procedure is an accurate method. Wherever it is applied, it will give the accurate and uniform subject heading no matter whosoever is the cataloguer, while in the case of compiled lists of subject headings, it is some time different.
4. **Symbiosis between classification and cataloguing:** There is a remarkable coordination between classifier and cataloguer in this method. A class number is assigned by the classifier, and the cataloguer turns it into subject headings of the terminology of classification schedule. In case of any mistake on the part of classifier in assigning class number, it is also corrected.
5. **Alphabetic key:** It provides an alphabetical entry under the idea denoted by every digit in the class number. The alphabetical subject headings derived by chain procedure lead the reader to the exact spot in as near to its formulated heading and to his actual need as possible. The subject headings derived on the basis of chain procedure forms therefore a never failing key to the classified part of the catalogue.

2.7 Limitations of Chain Procedure

Inspite of all its qualities, this system has limitations of its own. They are:

1. Cataloguers are deprived of the opportunity of studying books from the point of view of specific subject.
2. If the classifier has allotted the wrong class number, and the cataloguer fails to detect it, the defective subject entries will be prepared.
3. Chain Procedure is entirely dependent on the classification scheme and as a result it can be only as good as the classifications scheme used. For the success of this method the class number assigned to documents must be co-extensive with their subjects and properly modulated. Classification schemes do not always possess this quality.

4. There may not actually be a separate document in the library dealing with the subject represented by one or more of the sought upper links in a chain, which may confuse the readers.
5. The sequence of terms in a heading is not always desired one. The readers mostly consult the concrete idea among the group of words in a compound heading, but in Colon Classification only abstract idea is used, i.e

	BIBLIOGRAPHY, SHAKESPEARE (William) (1564).	
	For documents in this Class and its Sub-divisions, see the Classified Part of the catalogue under the Class Number	O111,2J64a

SHAKESPEARE (William) (1564), BIBLIOGRAPHY.

According to E J Coates, its (Chain Procedure's) importance lies in the fact that it is the first systematic procedure laid down for subject indexing. It is nearly, though not quite, mechanical in its method of working. It scores heavily over earlier practices on grounds of economy. It provides entry word approach for compound subjects through a combined system of generic and specific entries, but it has the disadvantage that the components in its compound subject entries are not given in the order in which most enquirers will think of them. Finally, it demonstrates subject relationship by alphabetical collection of entries on different aspects of the same subject. It is limited in this respect only by the extent to which the Colon Classification fails to „modulate“ fully in the listing of terms in hierarchy. The very fact that the British National Bibliography has employed Chain Procedure in preparing its subject index is a scintillating tribute to Chain Procedure's superiority over other techniques of subject indexing. Till classified catalogue is in use as a tool for the access of library's collection, Ranganathan will be remembered for maximizing the efficiency of this tool by devising chain procedure.

3. POPSI (Postulate-Based Permuted Subject Indexing)

3.1 Introduction

Chain Procedure devised by Ranganathan has been a significant landmark in subject indexing both in India and abroad. Its major weakness has been its dependence on a scheme of classification. The Class Number is the basis of Chain Procedure. If the Class Number of a document is constructed on the basis of a structurally defective scheme, the Chain Procedure cannot index the document properly. It also suffers from the problem of disappearing chain. The information scientists at DRTC developed an indexing system free from these defects which is called as POPSI. It does not depend on the Class Number but it is based on Ranganathan's postulates and principles of general theory of classification. Hence it is considered an improved version of Chain Indexing.

3.2 Advantages of POPSI

POPSI is helpful in:

1. Formulating subject headings which may be used as feature headings or for other indexing purposes.
2. Deriving subject index entries for a classified index, or for an index to a book, etc.
3. Determining the subject of a reader's query in a consistent and helpful way.
4. Formulating a strategy for searching information about a subject in a catalogue or other surrogate files, and
5. Deriving a base for the presentation of ideas in the text of a document.

Though POPSI is basically designed for manual methods, it is amenable to computers for which an improved version of software package is being developed.

3.3 Steps in POPSI

1. Verbal representation
2. Display of components
3. Short display

4. Approach terms
5. Deriving subject index entries
6. Display of subject index entries
7. Cross references
8. Alphabetical arrangement of entries

3.4 New Version of POPSI

This version of POPSI recommends a set of elementary categories which are:

Discipline (D), Entity (E), Action (A) and Property (P)

Discipline (D) covers conventional field of study e.g. Physics, Medicine, Political Science etc.

Entity (E) includes manifestation having perceptual correlates-Energy, Plants, Place, Time etc are its examples.

Action (A) includes manifestations denoting the concepts of „doing“.

Property (P) includes manifestations denoting the concepts of „attribute“, e.g. Effect, Efficiency, Power, Property etc.

3.5 Working of POPSI

The working of POPSI can be understood with the help of an example:

Document: Treatment of Tuberculosis of Lungs

It may be analyzed as:

First step: Verbal representation

D = Medicine

E = Lungs

P of E = Tuberculosis

A = Treatment

Second step: Formalization of the sequence of components:

Medicine (D), Lungs (E), Tuberculosis (P of E), Treatment (A on P).

Third step: Standardization and is concerned with semantics:

Medicine (D), Lungs (E), Tuberculosis (P of E), Treatment (A on P).

Fourth step: Modulation with augments:

Medicine (D), Man, Respiratory system, Lungs (E), Disease, Tuberculosis (P of E), Treatment (A on P).

Fifth step: Preparation of the Entry for organizing classification:

Medicine 6 Man, Respiratory system, Lungs 6.2 Disease, Tuberculosis
6.2.1 Treatment.

Sixth step: To decide the terms of approach

Treatment

See

Therapeutic

In the above chain, general terms like „Medicine“ and „Man“ are not selected as approach terms.

Seventh step: To prepare entries under each term of approach as given below:

Therapeutic

Medicine 6 Man, Respiratory system, Lungs 6.2 Disease, Tuberculosis
6.2.1, Therapeutic.

Tuberculosis

Medicine 6 Man, Respiratory system, Lungs 6.2 Disease, Tuberculosis
6.2.1, Therapeutic.

Similarly there will be entries under Disease, Lungs, Respiratory system. „Man“ and Medicine will be left out.

Eighth step: Alphabetisation of all the index entries and references.

3.6 Potentialities of POPSI

It can be used in various ways (i) to construct subject headings (ii) to generate subject index entries for classified catalogue etc. It is being used in a number of bibliographical and indexing publications.

Conclusion

POPSI is an extension of Chain Indexing. It has solved the problem of disappearing chain which was major criticism against chain indexing. It made the indexing system free from classification scheme. Though it is designed for manual methods, it is amenable to computer use also.

4. PRECIS (Preserved Context Indexing System)

4.1 Introduction

PRECIS came into existence in 1968. It has been developed by Derek Austin. It was the result of long research which was undertaken by the Classification Research Group (CRG, London). After testing it thoroughly, it was introduced in BNB in 1971. The BNB since its inception in 1950 has been using Ranganathan's Chain Procedure for preparing its alphabetical index. It is supposed to be free from all the limitations which chain procedure was suffering from. It may not be the best indexing system but it is believed to be better one.

4.2 Definition

The originator of PRECIS, Derek Austin has defined it as a system, “in which the initial string of terms, organized according to a scheme of role operators, is computer-manipulated so that selected words function in turn as the approach term. Entries are restructural at every step in such a way that the user can determine from the layout of the entry which terms set the appropriate term into its context and which terms are context dependent on the approach terms”.

4.3 Chief Characteristics of PRECIS

1. It is independent of classification scheme.
2. The headings to be generated by PRECIS are to be coextensive with the contents of the document at all access points.
3. The entries generated by the system are to be meaningful so as to enable the users to interpret them correctly.
4. The system is quite flexible to accommodate the new terms put into the literature freely.
5. The system is amenable to the use of computer for generating additional index entries.

4.4 String Making

Two principles are followed in the preparation of a string- (i) context dependence, and (ii) one-to-one relationship. This may be understood by taking an example:

Recruitment of Staff in the Colleges of Rajasthan

Here the component terms are: Recruitment, Staff, Colleges, Rajasthan. Hence we can say that there is a state Rajasthan which has staff, whose Recruitment is the theme of the document. The arrangement of the components in the string will be as follows:

Rajasthan. Colleges. Staff. Recruitment.

Here each term is directly related to the next term in the string.

4.5 Role Operators

The principles of „context dependency“ and „one-to-one relationship“ are adopted for the order of terms in the string.

Format

In the example given above the situation will be as follows:

Rajasthan. Colleges. Staff. Recruitment

Or

Recruitment. Staff. Colleges. Rajasthan.

The context in the above entries is intact. But this is not so in the following entries:

Colleges. Rajasthan. Staff. Recruitment

Or

Staff. Rajasthan. Colleges. Recruitment

4.6 Generation of Entries

Index entries are generated from the string by „shunting“. Each component term in the string becomes an approach term for the users by turn. This portion is shown below:

Rajasthan. Colleges. Staff. Recruitment

Rajasthan

Colleges. Staff. Recruitment

Colleges. Rajasthan

Staff. Recruitment

Staff. Colleges. Rajasthan

Recruitment

Recruitment. Staff. Colleges. Rajasthan

4.7 PRECIS V/s Chain Indexing

String formation in PRECIS is not dependent on classification scheme. Hence it is not affected by the structural defects of the classification scheme. It has also got over the problem of the disappearing chain which is a major point of criticism against Chain Indexing. It does not face also the problem of empty links as is the case with Chain Indexing.

Chain procedure is all right for a classified index but not so effective for alphabetical index. To make it suitable for alphabetical index certain modifications are suggested. POPSI is considered as the modified version of Chain Procedure which has been developed by DRTC. In it the problem of disappearing chain has also been solved.

Summary

PRECIS has also been adopted by national bibliographies other than BNB and indexing systems. In the words of Phyllis Richmond:

“The PRECIS system is one of the most versatile. In general, one may consider it a quantum jump ahead of contemporary competition”.

PRECIS has been criticized as it has not been able to have both the semantic and syntactic roles of terms in one single string. But a final judgement about its proficiency can not be passed.

LESSON 8: COOPERATIVE 8

7. Questions
8. Further Readings

1. Introduction

Cooperation in any sphere of human activities has become a common practice today. The success achieved through cooperation on national and international levels in many fields in the world has set us thinking as to how cooperation is essential to achieve any end.

Library cooperation is essentially a development of the twentieth century. Its evolution has its roots in the social, economic and technological changes and advances of the last seventy five years or so.

Cooperation has helped to mitigate the disability of limited resources, to coordinate methods and activities and to bring about by standardization an uniformity in the administration of services offered to the public.

2. Cooperative Cataloguing

Cooperative or centralized processing in one form or another is not a new idea, but it is an old one. Panizzi, William D Cooley and Charles C Jewett are the pioneers who advocated the need of cooperative cataloguing in 1850s. Through cooperative cataloguing, cooperating libraries share and avoid the wasteful duplication of cataloguing processes at individual libraries in producing a catalogue for their mutual benefit and also for the benefit of other libraries.

2.1 Definitions

The various authorities of library science have defined Cooperative Cataloguing. Some definitions are as follows:

Harrods's Librarian's Glossary

‘The sharing by a number of libraries of cost and / or labour of cataloguing to avoid the duplication of effort common to each’.

ALA Glossary of Library Terms

‘The production of catalogue entries through the joint action of several libraries, in order to avoid duplication of effort, particularly the plan by which cooperating libraries prepare copies of catalogue cards to be printed by the Library of Congress’.

Needham, C. D.:

‘Cooperative cataloguing refer to a situation where a number of independent libraries share the work of producing a catalogue for their mutual benefit’.

Cooperative cataloguing may operate at local level, between two or more adjacent library systems, at regional level, as in the compilation of regional union catalogues or at national level. National cooperative cataloguing is often combined with national centralized cataloguing so that the widest possible coverage of publications is represented by catalogue entries available to any library.

2.2 Objectives

S.M. Tripathi has enumerated the objectives of cooperative cataloguing as under:-

- 1) The basic object of cooperative cataloguing is to effect economy in the cost of cataloguing which the cooperating libraries share and to obviate the wasteful duplication of cataloguing processes of the participating libraries.
- 2) The union catalogue produced in this way will assist in the location and selection of documents which cannot be easily known in its absence.
- 3) The most important object of the cooperative cataloguing is to reveal the total resources of a region which enables the readers to select the desired materials.

2.3 Need and Purpose

Need for cooperative cataloguing was felt long back. In 1850 Royal Commission on British Museum asked Panzzi to prepare a catalogue of British Museum as well as a Union catalogue of works published in English in Great British or its colonies. C.C. Jewett and William D. Cooley advocated for the need of centralized and cooperative cataloguing long back. Due to literature explosion, acquisition rate of publications in libraries is increasing. A general review of the book stock of public and university libraries shows that there are several books, which are common to all these collections. If the collection of each library is separately catalogued, there will be huge wastage of money, manpower and machinery. If this work is done by a central agency, 60 per cent

of the books in university libraries and 90 per cent of the books in public libraries can be provided with ready made catalogue cards. The remaining stock can be catalogued by individual libraries.

2.4 Advantages

Some of the advantages of cooperative cataloguing are enumerated below:

1. Efficient and adequate catalogue entries are available.
2. Delay in cataloguing is reduced.
3. There will be saving of labour and time of the staff and there services can be devoted for readers advisory services, reference service, library extension activity etc.
4. There will be huge economy as printed cards will be cheaper.

2.5 Disadvantages

There will be some disadvantages of cooperative cataloguing:

1. Catalogue cards for certain titles of books cannot be supplied by cooperative catalogue agency.
2. It will decrease the number of skilled cataloguers to be employed by different libraries resulting unemployment of professional staff.
3. In case, cataloguing agency does not enjoy the copyright, books will have to be sent to the cataloguing agency by participating libraries which will be difficult process.

2.6 Forms of Cooperative Cataloguing

- a) The Library of Congress is continuing a cooperative cataloguing programme. In this programme, other libraries are expected to contribute catalogue card copies for printing. Each copy is edited by the Library of Congress so as to correlate it with other entries provided on the LC Cards. These edited copies are printed and distributed to subscribers.

- b) Since 1965, the Library of Congress has established as global network of national and regional offices for international cooperation. These offices supply bibliographical data which serves as a basis for cataloguing by the Library of Congress.
- c) A good example of cooperative cataloguing is the possibilities of the creation of a union catalogued on the basis of data supplied by the individual libraries.

3. Centralized Cataloguing

In a library system, where there is a Central Library having some branch libraries, many activities are performed repeatedly. The same book acquired at different branches will have to be classified and catalogued simultaneously. It is merely a wastage of time and manpower. If a central library takes of this work on behalf of its branches, the qualitative work can be done economically and uniformly.

If the same book is purchased in several libraries, all the libraries will have to process them. If book itself gives the catalogue entry or publisher supplies the catalogue entry along with book, the burden of classifying and cataloguing will be reduced to a large extent. This is possible through Centralized Cataloguing.

3.1 Definitions

Harrod's Librarian's Glossary

- (a) The cataloguing of books by some central bureau, and the distribution there from of entries.
- (b) The cataloguing at one library of all the books of a library system comprising more than one library, thus achieving uniformity throughout the system.

ALA Glossary of Library Terms

- (a) The preparation in one library or a central agency of catalogues for all the libraries of a system.
- (b) The preparation of catalogue cards by one library or other agency which distributes them to libraries.

Needham, C. D.

The cataloguing of documents by some central organization such as BNB, its main purpose, from a cataloguing point of view, being to save duplication of effort in cataloguing departments of numerous independent libraries.

Encyclopedia of Librarianship

The cataloguing, by one library or cataloguing office within a system of libraries, of all books acquired by all those libraries so that the results of such cataloguing are used by the individual libraries.

3.2 Objectives

The objectives of Centralized cataloguing according to Morsch are:

- (a) Avoid duplications of work;
- (b) To make the most effective use of the cataloguing personnel;
- (c) To reduce the cost of cataloguing;
- (d) To promote the uniformity of cataloguing and catalogues;
- (e) To raise the over all level of the quality of cataloguing.

3.3 Advantages

The advantages of Centralized cataloguing are many. For example:

- (a) Duplication of work can be avoided;
- (b) Cost of cataloguing can be minimized;
- (c) Uniform and standard cataloguing practices can be adopted;
- (d) Cataloguing can be qualitatively improved;
- (e) Some of the professional staff who are relieved of cataloguing work can be utilized for other useful professional service;
- (f) Preparation of union catalogue will become easy;
- (g) Promptness in service is possible; and
- (h) Use of sophisticated equipment for preparing entries is possible.
- (i) Printed catalogue cards are more legible and give neat appearance.

3.4 Disadvantages

There are some drawbacks and disadvantages in Centralized cataloguing. They are:

- (a) Pooling up the necessary funds to opt for centralized cataloguing may be difficult for some libraries.
- (b) Because of local variations, it may be difficult to go in for centralized cataloguing.
- (c) Some time centralized cataloguing system may cause delay as compared to local cataloguing.

3.5 Forms of Centralized Cataloguing

Some of the forms of Centralized cataloguing are as follows:-

- (a) Card (or sheaf) service
- (b) MARC (Machine-Readable Cataloguing) service
- (c) Information service
- (d) Cataloguing-in-Source
- (e) Cataloguing-in-Publication
- (f) Pre-natal cataloguing

3.5.1 Card (or sheaf) service

This is a type of Centralized cataloguing where the unit entries are prepared on cards (or sheaf) by a Central organization. Individual libraries can buy these cards in multiple numbers and after adding the appropriate headings to the basic unit, these cards are filed in catalogues. The BNB and the Library of Congress are rendering this type of service. There are many commercial firms as well providing commercial cataloguing services viz H.W. Wilson Company, U.S. Reprint Service and Zerox Bibliographics all of which supply sets of cards. Micrographic Cataloguing Retrieval System is a microfiche service, from which cards can be produced by reader see copy printer. Library of Congress also distribute proofs sheets, one each of all its cards. With the help of proof sheets, a typist can type out single cards and prepare other cards without much problem.

The serial number of Library of Congress given to every item catalogued are carried in US trade bibliographies Wilson Cumulative Book Index, Bowker's Publisher's Weekly and Book Publishing Record and by using these numbers libraries can order card set to Library of Congress simultaneously ordering the titles to the booksellers. BNB had adopted Standard Book Numbering System.

3.5.2 MARC (Machine-Readable Catalogue) service

In this service, a central organization produces entries in a machine readable form, such as magnetic type etc, by using a computer, from the magnetic tapes. Member libraries can either directly search the information from the tapes or use the service for the creation of conventional forms of catalogues and bibliographies. This service is receiving increasing acceptance all over the world. (MARC project has been separately discussed at the end of this module).

3.5.3 Information service

In this service, a bibliography is produced by a central organization, from which libraries can produce their catalogues either by cutting out the entries from the one sided printed bibliography and pasting them on cards etc. or using the information for their own cataloguing. The bibliography itself can also be used as a substitute for a catalogue. British National Bibliography and Indian National Bibliography comes under this service.

3.5.4 Cataloguing-in-Source

To have every published book bearing on the verso of its title page an authoritative catalogue entry and tracings may be something of a cataloguer's dream, but it became reality in January 1958 when Library of Congress started notable experiment with the initial grant by the Council of Library Resources for including the cataloguing information for a book in the book itself.

Under this venture, the central organization received page proofs of books from the publishers. These were given rush cataloguing and returned to the

publishers alongwith a catalogue card within the same day on which they were received. When the book was finally published it was compared with the catalogue information prepared for it. From June 1958 to February 1959, the Library of Congress catalogued 1203 publications of 157 publishers. The average cost of cataloguing came of \$25 per publication. The entry generally appeared on the verso of the title page in the form of a more or less accurate facsimile of a Library of Congress card. The catalogue entries thus prepared were called Cataloguing-in-Source. However this experiment could not be continued due to financial and technical problems.

3.5.5 Cataloguing-in-Publication

Despite of discontinuity of Cataloguing-in-Source experiment, there was an over increasing awareness of the great advantages of such a system and the economies that it could achieve.

The Cataloguing-in-Publication programme was started in 1971. The Library of Congress received \$200,000 as grants from the National Endowment for the Humanities and the Council on Library Resources for this programme for an experimental period of 2 years. Though this was a resurrection of the Cataloguing-in-Source, but it was given a new name as Cataloguing-in-Publication to show the difference between this project and the earlier experiment. This project was to include all forms of publications, motion pictures, maps and books. While CIS was an experimental project, CIP programme was intended to be a continuous programme.

Earlier under this scheme the entries are prepared at Library of Congress from gallery proofs and data returned to publishers within 10 working days. Sub-title, imprint and collations are omitted, but a complete record with the exception of collation is entered in MARC. The MARC is made available before four to six months of the publication of the book. This programme has processed over 28,958 titles during 1978 and later 1783 American publishers were collaborating in this scheme. This programme covered 73 per cent of total USA publications of book titles in 1978.

Being influenced by Library of Congress CIP programme, the British CIP programme began in 1975 and about 20 publishers were invited to participate initially. In 1983, 855 publishers took part in this programme. This meant about 43% of the publishers took active part in the programme.

In 1999 Electronic CIP Programme (ECIP) was introduced resifting wide speed parternreships become a possibility. With the development of ECIP in 2000, National Library of Medicine (USA) followed by Cornell University and Northwest University in 2005 became the first members of ECIP Cataloguing Programme. Presently 21 libraries across the United States are members of this programme ECIP participating libraries act as virtual Library of Congress cataloguing sections to catalogue forthcoming titles published by an affiliated university press, selected independent publishers or in specific subject areas.

3.5.6 Pre-Natal Cataloguing

Ranganathan has for many years urged the inclusion of a catalogue entry and a class number in each book on publication. He named it as the Pre-natal cataloguing. It involves completion of technical work by the National Central Library of a country on each book before its release by the publisher. Either a master stencil of the catalogue cards is prepared for each book before its release and its number is noted on the back of the title or a standard entry, including tracing for added entries is printed in the book itself, usually on the back of the title page.

Ranganathan has estimated that ‘there will be a saving of 79 per cent in the technical man-power of a national library system by the adoption of pre-natal classification and cataloguing of all home produced books by the National Central Library of a country.

S R Ranganathan has enumerated the following purposes of Pre-natal cataloguing:-

- (i) Faster availability of publications to readers through the quick processing and cataloguing.
- (ii) Cutting down of cost on cataloguing processes.

- (iii) Facilitation of standardization and easier identification of publications where ever they are quoted.

4. Centralized Cataloguing Vs Cooperative Cataloguing

Though both the terms seem synonymous, but there is quite difference. While Centralized cataloguing reduces cataloguing effort by providing centralized services, in Cooperative cataloguing participating libraries cooperate in cataloguing work.

According to Morsch 'Centralized and Cooperative cataloguing are often confused, partly because a cooperative project involving more than two libraries needs a central office to coordinate the work and distribute the production. Nevertheless, it should be kept in mind that Centralized cataloguing is that which is done by a number of libraries. Cooperative cataloguing is done in 2 or more libraries for the benefit of each participant and may be made available to others.

Centralized cataloguing need not be cooperative. In one sense, the cataloguing done in the main building of a public library system, for use there are in branch catalogue as well, is centralized, though not, strictly speaking cooperative. The Printed catalogue card service of Library of Congress is centralized, since it is done centrally and, through the Card Division of the Library is made available to thousands of libraries to be used in their catalogues. It is not cooperative since it is done by one library primarily for its own use, the cost being borne by that library out of funds provided for the purpose of preparing a catalogue of its own.

Centralized cataloguing is preferred over cooperative cataloguing done to increased uniformity, more prompt availability of cards, and economy.

5. Union Catalogue

5.1 Definition

Union catalogue is a form of cooperative cataloguing. It has been defined by different librarians and library scientists in their own manner. Dr. S.R. Ranganathan has defined it as 'list of all the documents in two or more libraries giving the names of all the libraries where copies of each document can be found'. He further adds that a union catalogue may cover all kinds of documents or any restricted kind of them. Another authority on union catalogue Kund Larsen has defined it 'a uniform catalogue is a listing in one sequence of the holdings of two or more libraries'. Harrod's Librarian's glossary defines union catalogue as 'a catalogue of stock in the various departments of a library, or of a number of library, indicating locations. It may be an author or a subject catalogue of all the books, or of a selection of them, and may be limited by subject or type of material'.

5.2 Advantages

Some of the advantages of union catalogue are as follows:

1. Helpful in procuring books on inter library loan.
2. Some books are costly e.g. reference books. Neighbouring libraries can decide what books will be purchased by which library. This type of cooperation will help in achieving economy.
3. It also helps in planning of stock in order to ensure better use of the collection and its preservation for future generation.
4. Union catalogue of periodicals provides useful bibliographical information. It indicates changes in the career of a periodical. As the entries in the union catalogues are carefully checked and standardized the libraries can follow the same rendering.

6. MARC I & II (MAchine Readable Catalogue)

A central organization catalogue the documents, records the data on magnetic tapes and supplies libraries with copies of the tapes. By using a

computer from the magnetic tape they can then produce printed catalogues of their collection or entries on cards and various kinds of bibliographies. The MARC service got increasing acceptance all over the world. Many libraries maintain their catalogues in the form of magnetic tape viz NASA (National Aeronautics and Space Administration). The computer is interrogated directly to answer enquires.

6.1 Historical Background

The Library of Congress investigations of the possibility of using automated techniques for its internal operations began in the late 1950's. As a result a committee was set up under the chairmanship of Gilbert W. King to determine the feasibility of applying automated techniques in Library of Congress. The committee submitted its report in 1963 and recommended for automation of cataloguing, searching, indexing and document retrieval activities of Library of Congress. As a result a programme to produce cataloguing data in machine readable form called MARC came into existence in 1966. Financial assistance was given by the Council of Library (USA).

6.2 MARC Pilot Projects 1966-68

In January 1966, Library of Congress invited 40 libraries to participate in pilot project. Out of those who responded affirmatively 16 were selected. This included variety of libraries viz Government, Public, University, Special, School libraries etc. In 1966 February a conference of participating libraries was called for describing:

- i. Concepts, objectives, schedules, functions and requirements of experiment.
- ii. The operation at Library of Congress.
- iii. MARC format
- iv. Materials to be sent weekly to participant libraries.
- v. The content of the report expected from the participating libraries.

Library of Congress took the herculean task of completing within 8 months the design and procedures and computer programmes required both for the Library of Congress operations and for the participants. Library of Congress

started distribution in September 1966. First tap was sent in October and weekly service containing 800 titles began in November 1966. The participating libraries were computing the tapes with the help of computer. The project was limited to cataloguing data for English language monographs. Earlier it was decided to end the project by September, 1967 which proved unrealistic and it was extended upto June 1968 and pilot service was extended to four more libraries. Total 50,000 machine readable records were distributed. A final project report was published in 1968 describing the experience of Library of Congress and participating libraries. It contains a detailed description of MARC pilot system, including the tape format, character sets, bibliographic codes, and input procedure. An analysis of the cost of production during the project period, as well as brief summaries of the computer programmes used are provided.

6.3 MARC II

4 months before the end of MARC I project, MARC II was begun after substantial evaluation of MARC I format. It covered all forms of material viz books, serials, maps, music, journal articles etc. In the beginning about 50 libraries became members of this programme on subscription basis and they were able to acquire in machine readable form cataloguing data for American as well as foreign publications acquired by Library of Congress under the Shared Cataloguing Programme. Since 1965, the Library of Congress has established a global network of National and Regional Offices for International Cooperation. Each office is responsible for the selection, acquisition and dispatch of material published locally. In Britain, office was located with the bookseller Stevens and Brown and the bibliographical information was supplied by BNB in MARC tapes.

From July 1969, Library of Congress shifted over to a period of testing the new procedures and programmes and a series of workshops were held throughout the country for the purpose of briefing library staff on the MARC II formats, Library of Congress procedures and the uses of MARC data by libraries.

The first 'Subscriber Guide to the MARC Distribution Service (later known as Books: A MARC format) was published in August 1968. MARC manuals

were published in 1969. Through these the institutions which desired to subscribe to MARC would have the necessary information for programming.

In accordance with the original plans to specify MARC formats for forms of material other than books, Library of Congress published formats for serials and maps in 1970, for films in 1971 and manuscripts in 1973. The music and sound recordings formats were published in 1975. In the design of all formats, Library of Congress worked with other organizations that had expert knowledge of the material concerned.

The distribution services were expanded as funds were available:

- (a) Distribution of records for films began in 1972.
- (b) Distribution of records for Serial, Maps and French language books began in 1973.
- (c) Upto 1974 about 5,00,000 records were supplied.

During all these years, MARC has expanded its scope from English language records to all Roman alphabet language. Besides, the conversion system has changed from paper tape input device to online cathode ray tube terminals. Library of Congress plans to continue to expand MARC until all the Library of Congress cataloguing i.e. 2,50,000 title annually is encompassed within MARC system.

6.4 RECON – REtrospective CONversion

Since the MARC distribution service was found to be successful the other libraries throughout America showed interest in converting their existing catalogues. If this were to be undertaken in a cooperative basis, it would be economical without any duplication of titles in machine readable form. Since Library of Congress was also interested to convert its retrospective records, it agreed for a large scale centralized conversion of retrospective cataloguing records and their distribution to other libraries. With the help of Council of Library Resources, the Library of Congress was able to conduct a study. This was called as RECON (Retrospective Conversion). This study brought out a report in 1969 and examined in detail (a) the hardware and software required for a large scale conversion (b) existing Library of Congress files to select the one

which is most suitable for conversion (c) the rationale to set priorities for conversion and to do the job satisfactorily and (d) the costs of hardware, software and man power for conducting the conversion process.

As a result of investigations, the study arrived at the following conclusions:

- (1) The MARC distribution service should cover all language and all forms of material.
- (2) Conversion of the retrospective records to machine readable form could be done early.
- (3) This service needs a standardization of bibliographic content and machine format standardization may be the same for current as well as retrospective material.
- (4) It should be centralized effort and should be under the direction of the Library of Congress.

On the basis of these recommendations, RECON pilot project was launched in 1969. The pilot project continued for 2 years and published its report in 1972. During this pilot project about 58,000 records were converted.

6.5 MARC in Other Countries

MARC came to U.K. in September 1967 with the grant of OSTI. By September 1968 tapes were produced. From May 1969 regular weekly service started. Not several institutions are making use of this service. Some other countries like Australia, Canada, France, Germany, Netherlands and Scandinavia etc have agreed to work to same MARC format standard. MARC is constantly changing US MARC and CAN MARC were harmonized in 1997 to create MARC 21 (meaning MARC for 21st century). British Library dropped UK MARC in favour of MARC 21. New tags and fields were added to accommodate new media i.e. field 856. Electronic location and Access was added in 1993 to make web-based records accessible from MARC records. In July 2002, the 'Agreement for the development and publication of MARC 21 format' was signed by the representations of the National Library of Congress, the National Library of Canada and the British Library.

6.6 Uses of MARC

Some of the applications of MARC are noted below:-

1. MARC tapes are used for selection purposes.

2. It is useful in the production of catalogue cards and book catalogues.
3. A bibliography in microform 'Books in English' is produced by merging BNB/MARC plus LC/MARC.
4. LC selects appropriate records from the MARC files for inclusion in the production of bibliographic tools for the blind and physically handicapped.
5. MARC is now searchable online by LC Card number within the Library of Congress.
6. The MARC data base is being used more and more frequently in Library of Congress as a bibliographic reference to supplement the card catalogues.

LESSON 9: CATALOGUING DEPARTMENTS

1. Introduction
2. Cataloguing Department
 - 2.1 Definition
 - 2.2 Location and Physical conditions
 - 2.3 Cataloguing tools and equipments
 - 2.4 Staffing
 - 2.4.1 Qualities of cataloguers
 - 2.4.2 Duty Hours
 - 2.4.3 Seating arrangement of staff

 - 2.6 Work Flow in Cataloguing Department
 - 2.7 Maintenance of Statistics
 - 2.8 Catalogue maintenance and revision
 - 2.9 Relation with other sections of library
 - 2.9.1 Order section
 - 2.9.2 Reference section
 - 2.9.3 Circulation section
 - 2.9.4 Departmental or Branch libraries
3. Questions
4. Further Readings

1. Introduction

Books are the real blood of a library. If one fails to circulate them in time, the library becomes paralyzed when the blood circulation stops. To provide high quality service to users, the library is divided into many sections or departments as Book Selection, Classification Circulation, Reference service etc. Cataloguing section or Department is one of them.

2. Cataloguing Department

Most librarians recognize that an effective organization of technical service is essential, if the library is to provide its users with high quality service. Though most of the tasks done in the library for the users service are technical, yet the work of cataloguing department of library is considered highly technical. The

quality of a library catalogue with greatly depend upon proper organization of a cataloguing department.

2.1 Definition of Cataloguing Department

Various authorities of cataloguing have defined the cataloguing department as follows:

According to Harrod's Librarians' Glossary 'The department of a library which deals with the cataloguing and classification of stock, and can include processing, i.e. preparation for issue to library users. Where there is no order department, the work relating to acquisition is also undertaken here.

According to A.L.A. Glossary or library terms 'The administrative unit of a library incharge of preparing the catalogue, and in many libraries of classifying the books.' The primary function of a cataloguing department is to prepare catalogue of all the reading material incorporating bibliographical details to satisfy all the sought approaches of the users.

The cataloguing department is mainly responsible for cataloguing all books, bound periodicals etc acquired by the library and make all necessary card records for shelf list and public catalogue. The task of this department primarily includes classifying, shelf listing, descriptive cataloguing, subject cataloguing, duplicating catalogue cards and withdrawals, maintenance including revision of existing entries and arrangement and filling of catalogue cards. In Indian libraries cataloguing and classification are handled by separate departments.

2.2 Location and Physical Conditions

For the success of a cataloguing department the most important consideration is its location. The work of cataloguing department is ultimately concerned with that of a book order, accession, reference and lending departments. Constant inter-communication with these departments and a reference to public catalogue, where there is no separate catalogue for the staff, makes is essential to plan the location of the cataloguing department at a

convenient place, so as to effect economy in time and labour of the staff. As this department plays a vital role in rendering technical services, its proximity with circulation, reference, book-order and accessioning sections is highly desirable. It should be on the ground floor of the library.

It should contain at least two sections—one for the classifier and his assistants and another for the cataloguer and his assistants. These should be so adjusted that the classifier should have a reasonable distance from the catalogue typists. As the work of classification is a high quality mental process it should be away from the constant noise of the typewriters/computer typists.

The physical conditions of a cataloguing department should be quite suitable to its working. Crowded and noisy cataloguing rooms are usually not very productive. Approximately every person needs to be provided with 100 sq. feet of floor space. Liberal planning and provision result in avoiding congestion and overcrowding as the library grows. Besides, location and space, the department should have good natural and artificial lighting arrangement. Good lighting plays dividends in increased production. Artificial light should be perfectly white light without glare.

Necessary furniture should be provided to the staff. It must be adjustable in height. It must be cozy, comfortable and suited to the requirements of an individual worker. Good furniture less the strain and fatigue of the cataloguing staff. Enough space should be provided for desks, chairs, book trunks and shelves for the catalogue. There should also be proper space for housing the processed material and for equipments.

The daily working of a cataloguing staff demands some authoritative reference tools for consultation. These are of the following type:

1. Catalogue codes.
2. Catalogues of important libraries.
3. Classification schedules
4. Approved lists of subject headings.
5. Standard dictionaries of subjects and languages.
6. Biographical dictionaries.
7. Encyclopedias
8. Up-to-date subject bibliographies

9. Who's who of various countries
10. Authority list
11. Catalogue cards
12. Type machines, Duplicating machine
13. Dictionaries ofonyms and pseudonyms.
14. The Cataloguing Staff Manual.

The above mentioned tools are a necessity for the cataloguers library. It is impossible for him to carry out his work without access to these. Besides these tools, some other reference tools may also be needed by the cataloguer. His proximity with the reference library is desirable. The most important of all these tools is the catalogue. A constant use of the catalogue to check up duplication of entries and to maintain consistency in cataloguing work is essential. It is such an important tool which is generally referred to by the cataloguing typists, classifiers, numberer and filer.

2.4 Staffing

Good work demands good staff. Therefore for timely and efficient working of a cataloguing department of a library, it should be well staffed. There should be three categories of staff i.e. Professional, Semi-professional and non-professional. The work of a cataloguer and assistants is purely professional, the status of professional workers and their salary scales should approximate to the work assigned to them. Routine or clerical works like pasting, numbering, arranging the books in order, transferring the books to various service departments of the library may, however be assigned to non-professional workers, whose salary may be less than those of professional staff.

2.4.1 Qualities of Cataloguer

As the work of cataloguing department calls for accuracy, uniformity and consistency, the cataloguer should be well qualified professionally and academically. He should possess the following qualities:-

1. Scholar, organizer, ardent and patient worker.
2. University degree holder.

3. Professional degree holder i.e. B. Lib., M. Lib. etc.
4. Should know regional/foreign languages.
5. Update knowledge of a cataloguing practices and codes.
6. Good library hand.
7. Good memory.
8. Experience of reference department.
9. Knowledge of other departments of library.
10. Flair for accuracy.
11. Should understand the requirements of users.

Butler has emphasized that 'if cataloguers are to win the professional respect that is due to them, they must learn to justify, explicitly and realistically, every detail in the bibliographical operations.

2.4.2 Duty Hours

The work of cataloguing causes strain and fatigue, therefore undue long hours of duty should not be insisted on. A duration of six hours with half an hour break is enough.

2.4.3 Seating Arrangement of Staff

The efficient and smooth working of a cataloguing department depends upon the proper assignment of its work. A wise distribution of work will definitely bring more fruits. There should also be logical sequence of working tables in the department. For example the Head cataloguer should sit in the centre to supervise and coordinate the working of other staff. The reviser or the final checker of the processed books be in close proximity with the person who designs master cataloguing slips for the catalogue typist. The catalogue typist be placed next to them as he may need the assistance of the person who has prepared the slips for him.

The classifier and his assistants should be in a separate cell, close to the cell of the cataloguer, as the classification and cataloguing are inter-dependent activities. It is the classifier who is responsible for the subject entries, required to be prepared for a particular book. The class number should co-relate the

subject entries. Both the classifier and cataloguer should know the readers approach and must well understand the utility of book for a particular type of reader.

The efficiency and success of the department depends upon its organization and proper exploitation of its man power. A chief cataloguer is selected and empowered to direct and supervise the work of others. The chief cataloguer who is an expert in cataloguing should be given a free hand to plan and divide the work in the best manner without undue interference from the librarian and the library committee. According to Minnie A Lewis it is the best advantage to exchange assistant of cataloguing and reference departments for the time being. Monthly meetings of the staff of cataloguing department also proves very fruitful.

2.5 Procedure of Cataloguing Department

To expedite the work of the department the following procedure may be adopted:-

The books received in the cataloguing department may be grouped into three:-

- (a) Books purchased by the library.
- (b) Books purchased by the departmental/branch libraries or for the department/branch libraries.
- (c) Books received as complementary and gift.

Books at serial no. 1 and 2 may further be divided into:

1. Reference books which may be in demand for reference department for providing reference service such as year books etc.
2. Rush books which are in immediate demand by the teachers and students.

As regards books purchased by the departmental/branch libraries, it is convenient to give them separate treatment, as such books are transferred to the departments/branch libraries after giving them proper technical treatment. Priorities may, of course be decided according to their demands in departments.

In order to facilitate the work of the cataloguing department books may be further subgrouped into (1) Fiction (2) Non-fiction (3) Serials (4) Books of foreign languages (5) Added copies and later editions (6) Pamphlets etc.

Special material grouping into book form such as atlas, incunabula, music score and microfilm, film scripts be given a special treatment by virtue of their nature, scope, purpose and get up.

Looking to the rush of work and strength of staff provided to the department, as far as possible each work should be entrusted to different persons. It is a fact that in a small university library this is not feasible, still books of language serials and departmental/branch libraries books be entrusted to different persons. This will provide quick and efficient service.

Specialization in a particular field is needed in a big library, but at the same time it should also be kept in mind that as far as possible all competent members of the staff should get opportunity to do all type of work within their capacity of work. Same type of work for all the days in a year provides monotony for the worker. Change of work accelerates the speed of work.

Division of work of a cataloguing department for producing more dividends at minimum cost needs imagination and wide experience. Proper exploitation of man power is essential to expedite the work timely. It is also necessary to bring economy in administration. In Indian libraries, all documents of Hindi and English language are better allotted to separate persons well acquainted with the language for classification and cataloguing, including assigning of subject headings.

2.6 Work flow in Cataloguing Department

The whole of cataloging department may be divided into six main divisions:-

1. Preparation of process slips.
2. Copying or typing of process slips on cards.
3. Comparison or revision of typed cards.
4. Numbering on typed cards and books.

5. Final checking of the cards.
6. Sorting and filing of catalogue cards.

Preparation of process slips require thorough and patience verification of previous entries in the catalogue. The process slip should provide a complete design of main entry of a book. The other added entries which are to be prepared by the typist, cataloguer must indicate on it specifically. When a process slip is finally approved by the chief cataloguer, it is ready for copying. Copying is done as per process slip in pursuance to instructions indicated for added entries etc. After the cards are typed they are compared and errors, if any are corrected. Cards, spine and date label of the book is numbered by the numberer. The whole processing is again checked up by the chief cataloguer, who is responsible for the whole work. The cards are taken out from the books and are sent for sorting and filing. The books are then sent to the various service departments after putting date of release over such books which are meant for circulation. The books belonging to departmental/branch libraries are separately listed and transferred to them alongwith one copy of catalogue cards, for their record. One copy of the cards in the catalogue of the central library serves the purpose of union catalogue.

2.7 Maintenance of Statistics

To assess the progress and flow of the work done in the department daily, weekly monthly and quarterly be maintained. For the compilation of an annual report, total number of books processed be recorded. More detailed statistics may be maintained to assess the strength and weakness of the department.

The basic reason for keeping statistics is to use them as a means towards the quantitative assessment of achievement and qualitative too if possible.

While assessing the work of an individual, his nature of work, quality of work and quantity of work be judged. Quantity alone should not be taken into consideration. The working of this department demands accuracy, consistency and neatness. To be accurate, slow working is essential. Inaccurate work consume more time in its correction. Clumsy and inconsistent work makes the catalogue ugly and bring blame to the library staff.

It is the responsibility of the cataloguing department to process the books within reasonable time to make them available to the readers. But if, despite good organisation, sound procedure, satisfactory morale a cataloguing department is unable to bring its accumulated arrears under control, its solution may be found out by providing more cataloguing personnel or adopting more realistic acquisition programme.

2.8 Catalogue Maintenance and Revision

As catalogue of a library provides a key to its holdings, proper upkeep of a library catalogue is of utmost importance, hence it should not be left on junior staff. Like acquisition and processing of books, filing is also a routine process of the cataloguing department, Filing work of catalogue cards proceeds along with the release of books. In other words, as soon as the books are out for public use its catalogue cards must also reach their respective catalogue trays. Their early or late entry in the catalogue cabinet may cause inconvenience to the readers. Withdrawal of catalogue cards of lost books and replacement of worn-out or soiled cards should be done immediately. It is the responsibility of the cataloguing department to keep the catalogue up-to-date as far as possible. A special care on the part of cataloguing department is needed to look after its working.

Besides these (1) replacement of worn and soiled cards (2) re-cataloguing of books, as and when necessary (3) catalogue expansion and shifting, when required (4) revision of subject headings by discarding outmoded ones and rehabilitate the catalogue with current headings, which are better understood and (5) editorial work on catalogue to correct filing errors are some other important duties performed by the cataloguing department of a library. To carry out all these tasks properly and timely a filer, well conversant with the filing rules be assigned these jobs, Any error in the process of filing and withdrawal may cause inconvenience to readers and also misguide the library staff referring the catalogue during the process of their routine work. The whole purpose of classification and cataloguing is marred if the filing of catalogue cards is not done properly. Hence the department should shoulder this responsibility with due caution.

2.9 Relations with other departments

Cordial relations between one department and another department of a library are necessary for effective and efficient working. Reciprocity tends to improve the service and infuses a feeling of cooperation in the staff. As the cataloguing department plays a key role in the library its intimate relations with other departments such as acquisition, circulation, reference and with departmental/branch libraries are essential.

2.9.1 Ordering and Cataloguing Department

In some libraries ordering and cataloguing are combined under one head, but most libraries divide the work into two. Actually these two departments should have close connections. Both have to depend upon one another. The catalogue department gets material from the acquisition department. The acquisition department depends upon the cataloguing department for information's such as duplicates, replacements, differences in editions and similar other questions and the cataloguing department looks to the acquisition department to transmit relevant informations that may facilitates the work of cataloguing.

2.9.2 Reference and Cataloguing Department

The catalogue and reference department carry almost equal responsibilities with regards to readers services. It is said that a cataloguer must be a good reference librarian/also. He must know the requirements of a reader and his possible approaches to a document. Hence catalogue department of a library should be equipped with necessary reference tools for carrying on the work. The catalogue reveals the stock and a reference librarian carries out his duties efficiently and effectively if the cataloguer has performed his task as per his reference needs. On the other hand the cataloguing department knows from the reference librarian the approaches and needs of readers. Both the cataloguer and the reference librarian must discuss the needs of readers. Both catalogue and

reference librarian must discuss the needs of readers for effective and efficient readers service in a librarian.

2.9.3 Circulation and Cataloguing Department

Circulation department of a library is most easily accessible to its readers. It is one of the departments which comes in close which the public. Catalogue of a library is generally placed in close proximity with this department, hence it regularly receives readers comments regarding the entries in the catalogue. The circulation assistant also use the catalogue constantly for guiding and providing services to the new and inquisitive readers. He also works down certain points of improvement for the catalogue entries. He keeps a watch on the readers approaches and is ready to welcome their suggestions. The cataloguing department of a University library should be in constant touch with the circulation department for any improvement in the catalogue.

2.9.4 Department/Branch libraries and Cataloguing Department

A close relation with department/branch libraries, being served by the library, be maintained. Their suggestions with regard to catalogue entries, prepared for their libraries be taken into consideration. Books belonging to departmental libraries be given priorities

Cataloguing department should not fail to take advantage of the knowledge of the experts in charge of special departments, such as technology, medicine, art and music. Advice from them for classification and subject headings will often help to settle a doubtful point.

If a catalogue department is planned carefully and organized properly on scientific lines, it will work economically and efficiently. In charge of the cataloguing department should always keep an eye the new ideas and latest equipment of duplicating cards.

LESSON 10: FILING OF ENTRIES

1. Introduction
 2. Meaning of filing of entries
 3. Classified arrangement of entries as given by Ranganathan
 4. Alphabetical arrangement and alphabetization
 - 4.1 Basic principles of alphabetization
 5. Ranganathan's rules for alphabetical arrangement
 6. ALA rules for filing catalogue cards
 - 6.1 Basic order
 - 6.2 Alphabetical arrangement
 - 6.3 Special rules
 - 6.4 Order of entries
 7. Summary
 8. Questions
 9. Further readings
-

1. Introduction

Cataloguing practical may be divided into two broad heads:

1. Preparation of entries
2. Filing of entries

It is not sufficient to prepare entries of documents in a library. It is usually seen that most of the readers either do not consult the catalogue or unable to use it. This all is due to the intricacies of filing of entries. Hence the filing of entries must be convenient and understandable to users. To quote Sharp, “It should be remembered and it is not always remembered – that the catalogue will be used largely by people who have little knowledge of the rules of alphabetization other than those that come to them by instinct or through common usage adopted in such every day books of reference as directories and dictionaries”. Filing rules are given in several codes of cataloguing. The most notable of them are:

1. ALA rules for filing catalogue cards.
2. British Standards Institution’s Alphabetical arrangement.
3. Indian Standards Institution’s practice for Alphabetical arrangement.
4. Ranganathan’s Classified catalogue code also includes filing rules.

In this module we shall remain confined to:

1. Ranganathan’s filing rules given in his Classified catalogue code, 5th ed.
2. ALA rules for filing catalogue cards, 2nd ed.

2. Meaning of Filing of Entries

Filing means to arrange entries in an orderly manner. It is not as simple as it might appears to be. The filing goes on as complicated with the growth of catalogue. In other words, the bigger the catalogue, greater the problems. That is why Cutter, the father of modern cataloguing was quite aware about this part of cataloguing and he included the rules for filing of entries in the last edition of his „Rules for a dictionary catalogue“ from p. 111-129.

Filing may be divided into two broad groups:

1. Classified arrangement of entries.
-

2. Alphabetical arrangement of entries.

3. Classified Arrangement of Entries as given by Ranganathan

Ranganathan was the staunch supporter of bipartite classified catalogue. Classified catalogue has two parts as following:

1. Classified part
2. Alphabetical part

Ranganathan in his CCC has included rules for classified arrangement of books. Since he devised Colon Classification using mixed notation, he has given rules no. 024, 025 and 0251 for the arrangement of class numbers in his Colon Classification. In his CCC he has given some main suggestions in this connection in the pages 108 to 109.

The entries in classified part should be arranged by means of class numbers given in their leading sections. He has allotted ordinal value to different digits in his Colon Classification (6th rev ed.). These are being given below according to the ascending value of digits:

) ← → 0 ,, . : ; , - a b ... z 1 2 ... 9 A ... Z (

The following digits are used in his Colon Classification (7th ed). These are being given below according to the ascending value of digits:

* “←) & ,, . : ; -, = + → a b...z 0 1 2... 8 9 A...Z (

He has given additional rules for arranging entries having the same class number in their leading sections. Quite a good number of rules have been included in CCC for arranging such entries. Some important rules are being quoted below:

CCC EG21: Among the entries with the same class number in their respective leading sections, those with one or more book numbers are to have precedence over those without them.

According to CCC two kinds of entries are arranged in classified part in a single classified order:

1. Main Entries
 2. Cross Reference Entries
-

Entries with book numbers are main entries and entries without book numbers are cross reference entries. As per above mentioned rule, the main entries i.e. entries with book numbers will get precedence over cross reference entries i.e. entries without book numbers. It is being illustrated with the help of following example:

		N89
		AGRAWAL (Shyam Narain) (1941). Life of Ram Prakash Goel.

		<u>See also</u> 2xN33 N91 Jindal. Collected works. P 289-93.

Out of these two entries, the first one with a book number will get precedence over the second one.

CCC EG22: Entries with book numbers in their respective leading sections are to be arranged among themselves by the book numbers.

CCC EG31: Entries with the same class number and without book numbers in their respective leading sections are to be arranged among themselves by the book numbers, if any, in their respective third sections.

Example

		<u>See also</u> 2xN33 N91 Jindal. Collected works. P 289-93.

--	--	--

		<u>See also</u> 2 N97 Srivastava. Introduction to library science.

These two entries having same class number in their leading sections will get arranged according to the book numbers given in the third section. Hence the order will be the same as given above.

CCC EG32: Such of the entries coming under Rule 31 of this chapter as have the same book numbers in their third sections, are to be arranged among themselves by the class numbers, occurring in their respective third sections.

4. Alphabetical Arrangement & Alphabetization

There are several problems connected with alphabetical arrangement and there is difference of opinion also between different experts about alphabetization. In many American and British libraries the rules are framed in this connection and followed by them. But there is no unanimity in them. Hence the readers feel inconvenience.

4.1 Basic Principles of Alphabetization

There are two basic principles of alphabetization:

1. Letter by letter arrangement: It is also named as „All – through arrangement“. In this arrangement a letter is taken as an entity for the arrangement and no importance is given to any other point.
2. Word by word arrangement: It is also named as „Nothing before something“. In this arrangement the word is taken as an entity for the order of arrangement.

These two principles may be understood by the following example:

Example:

Letter by letter arrangement

Hindu

Hindi Civilization

Hindukush

Hindu Law

Hindu Law Digest

Hindu Philosophy

Hindu Pilgrimage

Hindu Service Organization

Hindu Society

Hindu State

Hindu Temple

Word by word arrangement

Hindu

Hindu Civilization

Hindu Law

Hindu Law Digest

Hindu Philosophy

Hindu Pilgrimage

Hindu Service Organization

Hindu Society

Hindu State

Hindu Temple

Hindukush

Note: In the above mentioned example the term „Hindukush“ comes third in order according to „letter by letter arrangement“, while according to „word by word“ arrangement it comes at the end.

Alphabetization is of following two kinds:

1. Gestalt alphabetization
2. All through alphabetization

In Gestalt alphabetization, ordinal values are given to „word space“, „sentence space“ and „paragraph space“. Different ordinal values also given to „capital letters“, „small letters“ and „letters in italics“.

In All through alphabetization all the above mentioned things are ignored. But special rules are to be provided for the occurrence of different species of conventional symbols.

Ranganathan in his CCC has prescribed the midway position between these two basic principles. He mechanized the arrangement of entries by specifying the rules of alphabetization and rules of writing in Chap ED of CCC in an integrated manner.

5. Ranganathan's Rules for Alphabetical Arrangement

Ranganathan in his CCC has adopted „Letter by letter“ arrangement. In his opinion many persons write one word of their names in two or more words. As per „Word by word“ principle in this condition entries pertaining to same name will get scattered in the catalogue which will be inconvenient to the users. He will not be able to know as under what form of name he has to search a particular author. It may be clarified by the following example:

Jagjiwanram

Jag-jiwan-ram

Jag Jiwan Ram

Ranganathan has given rules for arrangement of entries in his CCC in Chap. EG and EH. Some of the important rules for the arrangement in alphabetical part are being quoted below:

EH1: The entries in the alphabetical part are to be arranged strictly by the alphabets, as in a dictionary ...

EH2: In an alphabetical arrangement no attention is to be paid to initial articles (i.e. a, an, the).

EH31: German words spelt with the vowels, „a“, „o“ and „u“ are to be arranged as if they were spelt a, o and u respectively.

EH4: Scottish names with the prefix „Mac“ and its abbreviated forms such as „Mc“ and „M“ are to be arranged according to their apparent alphabetical make up.

EH5: Similar treatment should be given to names beginning with „St“ and „Ste“. Use cross references to connect the names.

EH70: The following ascending scale of ordinal values be borne in mind in arranging the entries in the alphabetical part:

1. Section space;
2. Full stop;
3. Comma;
4. Numerals in their natural sequence;
5. Bracket;
6. Words in Roman (alphabets);
7. Words in italics or underlined words;
8. The word „and“ or its substitute semi colon; and
9. Etc.

This rule may be understood with the help of the following example. The word „JABALPUR“ has been improvised to serve as example:

JABALPUR

LABOUR ASSOCIATIONS

JABALPUR

6. ALA Rules for Filing Catalogue Cards

ALA rules for filing catalogue cards are in two parts:

Part 1. Alphabetical arrangement

Part 2. Order of entries

The number of rules in this code are quite many. It is not possible to quote all of them. Some selected rules are being discussed in this module.

6.1 Basic Order

- (1) The basic order is alphabetical „Word by word“ except in certain areas where numerical or chronological arrangement is preferable (P. 1).
- (2) When the same word, or combination of words are used as the heading of different kinds of entries, the entries are to be arranged alphabetically „Word by word“ disregarding kind of entry; form of heading, and punctuation marks except that personal surname entries are to be arranged before of the entries beginning with the same word or combination of words (P. 1).

6.2 Alphabetical Arrangement

1B. Use „Word by word“ order. Apply the principle of „Nothing before something“ considering the space between words as „nothing“. Initial articles and articles at the beginning of certain proper names are disregarded (P. 2-3).

1C. In a dictionary catalogue, interfile all types of entries and their related references, in one general alphabet (P. 3).

3. Disregard punctuation marks that are part of title or corporate name (P. 8).
 - 4A1: Disregard an initial article in the nominative case in all languages and file by the word following it. This applies to the all types of entries with two exceptions ... (P. 9).

6.3 Special Rules

5A: Arrange initials, single or in combination, as one letter words, before longer words beginning with the same initial letter. Interfile entries consisting of initial plus words, with entries consisting of initials only (P. 13-14).

Example

A.

A.A.

A.A.A. Foundation for Traffic Safety.

A.B.

A was an archer.

5B: Disregard variations in spacing and punctuation and arrange initials in one straight alphabetical file (P. 14). For example XYZ; X Y Z; X.Y.Z... all file as if written XYZ.

5K: Arrange acronyms... as words, unless written in all capitals with a space or period between the letters (e.g. UNESCO or U.N.E.S.C.O.) (P. 19-20).

6A1: Arrange abbreviations as if spelled in full in the language of the entry, except Mrs. ... If the meaning of an abbreviation is uncertain; file it as written (P. 22).

6B: Arrange initials and other abbreviations for geographical names in author and subject headings as if written in full, whether at the beginning or at the end of the heading. Follow the same rule when they occur in titles and other entries if the full name of the place for which they stand is commonly known (P. 24).

9A: Arrange numerals in the titles of books, corporate names, cross references etc. as if spelled out in the language of the entry (e. g 1100 eleven hundred, 3½ three and a half). (P. 38-39).

Rule No. 10 and 11 recommend interfiling of the same words spelled differently and of the same compound words written differently.

Two words (or hyphenated) forms are always filed under the one word form (P. 49).

When there is an established subject heading or subject cross reference under one of the spellings, choose that spelling. In other cases, generally choose the most commonly accepted current usage. Consult the latest edition of

standard general dictionaries. Also take into account the preponderant form in the entries (P. 49).

Choice between American and English spellings, should be based on the basis of the country. In an American library, American spellings and in British and Indian libraries, English spellings should be used. For example in British and Indian libraries „honour“ and in American libraries „honor“ should be used. Explanatory references should be made from the form or forms not chosen.

6.4 Order of Entries

Here the order of different kinds of entries beginning with the same word has been described. Cutter was aware with this problem and he has suggested as following in his „Rules for a dictionary catalogue“:

1. Collection of all or almost all works of an author.
2. Collection of selected works of an author.
3. Single works of an author

In works written by other persons on that author Brown has suggested a different order of:

1. Single works of an author arranged in chronological order.
2. Collection of works of an author in chronological order.

Some selected rules of „ALA rules for filing catalogue cards“ are being quoted below for the order on different kinds of entries beginning with the same word.

19A. When the same word or combination of words is used as heading of different kinds of entry, arrange the entries in two main groups as follows:

1. Single surname entries, arranged alphabetically by forenames.
2. All other entries, arrange alphabetically „word by word“, disregarding kind of entry, form heading, and punctuation (P. 93).

19B1: Single surname entries. Arrange different kinds of entries under the single surname heading in groups in the following order:

1. Author (main and / or added entry)
-

2. Subject, without subdivision
3. Subject, with subdivision

19B2: All other entries

- (a) Personal name entries (compound names, given names). Arrange different kinds of entries under the same compound or given name heading in three groups the same as under single surname headings.
- (b) Corporate entries (corporate names, place names, uniform titles). Arrange different kinds of entries under the same corporate name in the groups in the following order:
 1. Author (main and / or added entry) without subheading.
 2. Subject without subdivision and identical title added entries; interfiled and subarranged alphabetically by their main entries.
 3. Name with corporate name and/or subject subdivisions, the subdivision interfiled alphabetically with each other and with titles, etc., disregarding punctuation; each corporate author heading followed by its non subject entries (P. 93-94).

Example:

Indian Political Science Association (Corporate author without subheading).

INDIAN POLITICAL SCIENCE ASSOCIATION (Subject without subdivision).

INDIAN POLITICAL SCIENCE ASSOCIATION-HISTORY (Subject with subdivision).

Indian Political Science Association Conference (Title).

19B2c: Title and subject entries identical. Interfile title added entries and subject entries that are identical and subarrange alphabetically by their main entries. Title main entries precede identical entries with an author (P. 94).

Example:

Longman, Arthur M. (Author heading)

LONGMAN, ARTHUR M. (Subject heading)

Longman, Margaret, F. (Title heading)

LONGMAN, WILLIAM JOHN (Subject heading)

20D1: Arrange entries under the same surname followed by the designations, forenames or initials, alphabetically by the designation, forenames, or initial that follows the surname, all in one group, disregard any designation, such as title of nobility, honor, or address, or distinguishing phrases, that may precede or follow forenames unless it is necessary to distinguish between names that would otherwise be identical (P. 97).

Example:

Corbett

Corbett, J.

Corbett, Hunter

Corbett, Mr.

Corbett, Mrs.

Corbett, Nicholas

Corbett, Pseud

Corbett, William

20D2: An initial precedes a fully written forename beginning with the same initial letter. Treat initials the same whether followed by open space (for later completion of name) or a period.

Example:

Mikes, G.

Mikes, G.R.

Mikes, G. Richard

Mikes, G. Lambard

Mikes, Gerald

Mikes, Gerald L.

Mikes, Gerald Erore

Mikes, Gerald Lamb

28C. Corporate entry arrangement. Arrange different kinds of entries under the same corporate names in groups in the following order:

1. Author (main and / or added entry) without subheading, subarranged by titles according to Rule 26.
2. Subject without subdivision, and identical title added entries, interfiled and subarranged alphabetically by their main entries.
3. Name with corporate and/or subject subdivisions, the subdivisions interfiled alphabetically with each other and with titles, longer corporate names beginning with the same words, etc. disregarding punctuations; each corporate author heading followed by its own subject entries.

Example:

World Health Organization (Author heading)

WORLD HEALTH ORGANIZATION (Subject heading)

World Health Organization and its activities (Title heading)

WORLD HEALTH ORGANIZATION, LIBRARY (Subject heading with subdivision)

World health Organization, Administrative Division (Author heading with subdivision)

7. Summary

The classified arrangement is based on ordinal value allotted to the digits by the classificationist in a particular scheme of classification. It is quite simple with the classification of pure notation like Decimal Classification but a bit difficult with the classification scheme adopting mixed notation like Universal Decimal Classification and Colon Classification. Since here we are concerned with Ranganathan's CCC, the rules given in this code for Colon Classification have been discussed in the preceding pages.

Alphabetization requires a set of rules. Classified catalogue suggested by Ranganathan is a bipartite catalogue having another part as alphabetical part. Hence the rules given in Ranganathan's CCC for alphabetical arrangement are discussed in brief. It follows the midway position between Gestalt alphabetization and All through alphabetization.

ALA rules for filing catalogue cards is available in two editions. For big libraries full edition containing detailed rules must be adopted. The abridged edition suffices the needs of medium sized and small sized libraries. Alphabetization is a difficult task and not so simple as it seems to be.

With the application of computer and adoption of automation in information centers and libraries, large information centers and libraries may convert their catalogues into machine readable catalogue (MARC). The existing filing rules are being found to be insufficient and inconsistent to apply. International Standards Organization has published an international filing standard. It should not be inappropriate to say that filing rules must be simple and easy to apply for most of the existing libraries.
