UNIVERSITY EXAMINATIONS 2017/2018

DIGITAL SCHOOL OF VIRTUAL AND OPEN LEARNING

FIRST SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
OF EDUCATION AND BACHELOR OF ARTS

AEN 100: INTRODUCTION TO THE STUDY OF LANGUAGE

DATE: THURSDAY 21ST DECEMBER 2017

TIME: 2.00 P.M. - 4.00 P.M.

INSTRUCTIONS

Answer Question ONE and any other TWO questions

Question One (compulsory) – 30 marks)

- a) Explain what is meant by the term “artificial language” (10 marks)
- b) What is a subordinate clause? Give an example. (5 marks)
- c) Identify all the morphemes in the following sentence and state whether they are free or bound morphemes. If a morpheme occurs twice, list it only once. (9 marks)

The government was committed to improving both remuneration and working conditions of the doctors.

- d) With an example of each, explain two rules that were common in prescriptive linguistics. (6 marks)

Question Two (20 marks)

- a) Describe the following sounds according to voice, place and manner of articulation. (10 marks)

/k/

/j/

/d/

/f/

/r/

OTONDE MICHAEL AWITI

- b) With an appropriate example of each, distinguish the following concepts in phonetics. (10 marks)
- i) Active and passive articulators
 - ii) Voiced and voiceless sounds

Question Four (20 marks)

Discuss three characteristics that make the study of language scientific. (20 marks)

Question Five

With an example of each, describe the following concepts in semantics.

- a) Conceptual meaning
- b) Associative meaning
- c) Hyponymy
- d) Polysemy

FIRST SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF ARTS

AEN 101: AN INTRODUCTION TO THE GRAMMAR OF ENGLISH

OTONDE MICHAEL AWITI

DATE: THURSDAY 5TH DECEMBER 2019

TIME: 2.00 P.M - 4.00 P.M

INSTRUCTIONS:

Answer Question ONE and any other TWO Questions

Question 1 (Compulsory)

(a) Using examples, distinguish between open and closed words classes (10 marks)

(b) Use the words below as instructed

i. Faster: as a comparative adjective and as an adverb

ii. Home: as a noun and as an adverb

iii. The: as a determiner demonstrative and as an adjective (10 marks)

iv. Who: as a relative a pronoun and as an interrogative

(c) Construct sentences containing the following clause elements:

(i) SVA

(ii) SVC

(iii) VOO

(iv) ASVC

(v) SAVOC (10 marks)

2. With two examples for each describe the types of sentences below

a) Simple

b) Compound

c) Complex

d) Compound complex (20 marks)

3. Adverb phrases help us to express a wide range of meanings. Identify and illustrate any FOUR of such meanings. (20 marks)

4. (a) Clearly explain the difference between identifying and descriptive adjectives. (10 marks)

(b) Most adjectives can be used attributively as well predicatively. Demonstrate this.

(10 marks)

5. (a) Using illustrations, outline the key differences between primary and modal auxiliaries.

(10 marks)

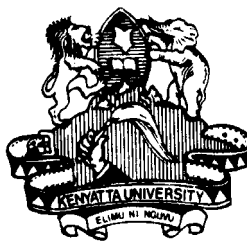

(b) Identify and illustrate any TWO key functions of prepositional phrases in grammar

(10 marks)

INSTITUTIONAL BASED PROGRAMME

EXAMINATION FOR THE DEGREE OF BACHELOR OF EDUCATION

AEN 201: DESCRIPTION OF MODERN ENGLISH

DATE: THURSDAY, 29TH APRIL 2010

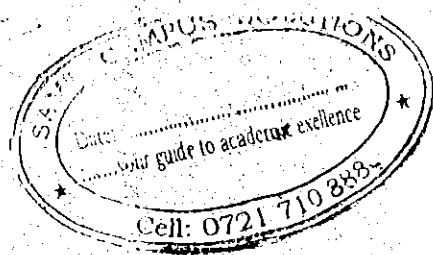

TIME: 8.00 A.M. - 10.00 A.M.

INSTRUCTIONS: Answer question 1 and two other questions.

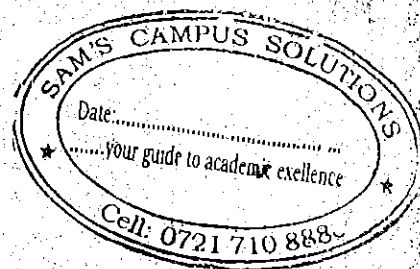

1. Answer questions a, b and c below:

- a) Write down only the verb or verb phrase in each sentence below and after it indicate if it is transitive, intransitive or linking. (10 marks)
- i) On Sunday we will be going on a picnic.
 - ii) The birds seem strangely quiet this morning.
 - iii) Redeem these coupons for valuable merchandise.
 - iv) This has been a special day.
 - v) The screen writer has been making many script changes.
- b) Write and name the phrase underlined in each sentence below, and then indicate its function in the sentence. (10 marks)
- i) The nurse gave the starving children some food.
 - ii) They watched the men excavating gemstones.
 - iii) Maasai women wear beads round their necks.
 - iv) Sleek looking goats roamed the streets.
 - v) The dog with big ears belongs to my brother.
- c) Rewrite the subordinate clause in each of the following sentences and indicated if it is noun, adjectival or adverbial. (10 marks)
- i) Unfortunately I don't know whether I can afford basketball camp.
 - ii) Whoever finds your wedding ring will surely leave it in lost and found.

- iii) The lady who needs your babysitting services is Mrs. Ngoda.
 - iv) Workers must wear hard hats in this area so that everyone is safe.
 - v) Most applicants whom we hire are available for work on weekends.
2. Answer both questions (a) and (b).
- a)
 - i) Define primary auxiliary verbs.
 - ii) Select any two primary auxiliary verbs, and for each, write two sentences to illustrate how it can function. (10 marks)
 - b) Distinguish between 'subject' and 'subject word' in a sentence. Support your answer by writing two sentences which clearly illustrate the two terms. In sentence highlight the terms stated above. (10 marks)
3. Identify any five functions of a clause, and for each write two illustrative sentences. Highlight the function you are referring to in each sentence. (20 marks)
4. Describe sentences from the semantic aspect and give the corresponding function of each sentence. Exemplify each function appropriately. (20 marks)
5. Explain how the structure of grammatical units is like that of natural objects or of items in the world of technology. (20 marks)

AND BACHELOR OF EDUCATION

AEN 300: PHONETIC AND PHONOLOGICAL ANALYSIS

DATE: Monday 9th December 2019

TIME: 8.00a.m -10.00a.m

INSTRUCTIONS:

Answer question ONE and any other TWO questions

Question 1

- a) For each of the following sounds state the phonetic specification given. [6 marks]
- i) [p]: manner of articulation
 - ii) [G]: Phonation types
 - iii) [e]: lip rounding
 - iv) [h]: cavity
 - v) [s] : place of articulation
 - vi) [t'] : air stream mechanism
- b) With appropriate examples from any language describe any two assimilatory process and any two non-assimilatory process. [6 marks]
- c) Discuss the FOUR states of the Glottis and show how each affects the phonation mode of sounds. [6 marks]
- d) Using examples from a TONE language explain the following concepts. [6 marks]
- i) Counter Tone
 - ii) Tone merges
 - iii) Down Step
- voiced
whisper*

c) With the aid of well-labelled diagram analyse the following words into SYLLABLES.

[6 marks]

i) ENGLISH DATA

Two

Pick

ii) KISWAHILI DATA

Lala (which means 'sleep')

Onja (which means 'taste')

Question 2

a) Drawing examples from English and other languages demonstrate how features may be distinctive in one language and redundant in another. [12 marks]

b) Explain two types of distinctive opportunities. [8 marks]

Question 3

Use the sound [ð, t, a, θ, u, s, w, l, r, β] to answer the following questions

a) Explain the notion of SONORITY then place above sounds on a sonority scale. [10 marks]

b) Use the features LABIAL, NASAL, SONORANT /OBSTRUENT, SYLLABIC to prepare a distinctive feature metric/table for the sounds above. [10 marks]

Question 4

a) Use examples from any language to explain how FREE VARIATION differ from COMPLEMENTARY DISTRIBUTION.

b) Giving examples, briefly describe the three types of Non-pulmonic consonants. [10 marks]

Question 5

With relevant examples briefly explain any two of the following:

a) Diacritic marks [10 marks]

b) Numerical stress value [10 marks]

c) Geminates [10 marks]

d) Articulatory settings [10 marks]

AEN 300: PHONETIC AND PHONOLOGICAL ANALYSIS

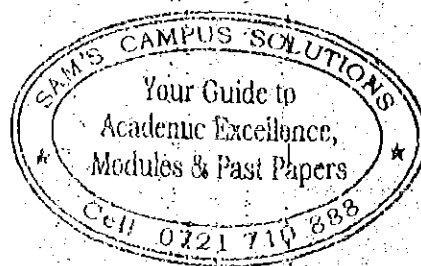

DATE: Wednesday, 26th July 2017

TIME: 2.00 p.m. - 4.00 p.m.

INSTRUCTIONS:

Answer Question One and any Two other Questions.

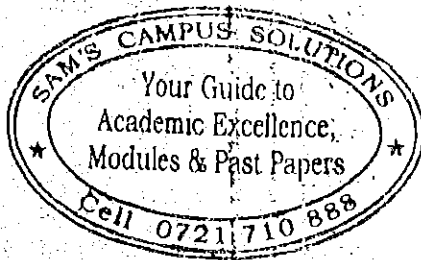

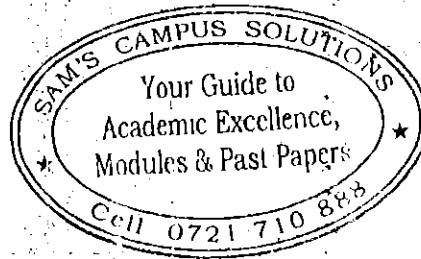

1. (a) For each of the following sounds, give the name and a brief description of its airstream, vocal tract feature, organ and state of glottis. [10 Marks]
- (i) [f]
 - (ii) [z]
 - (iii) [tʃ]
 - (iv) [w]
 - (v) [h]
- (b) Briefly distinguish between the Parametric and metrical approaches to the analysis of speech sounds. [10 Marks]
- (c) Distinguish between the egressive pulmonic airstream mechanism, and ingressive glottalic airstream mechanism, giving examples of sound, that result from each of them. [10 Marks]
2. (a) Distinguish between the following terms as used in Alexander Trubetzkoy's (1939) theory of destructive oppositions. Give appropriate illustrations
- (i) Multilateral vs bi-lateral opposition
 - (ii) proportional vs isolated oppositions
 - (iii) privative vs non-privative opposition. [10 Marks]
- (b) What is the relevance of the Destructive Feature theory as propagated by The Prague School of Linguistics to Phonological analysis. [10 Marks]

- (a) Secondary articulation
PETER WAFULA 0721 710 888 47
(c) Double articulation
(d) Assimilation

4. What are distribution statements? Use examples from the English language to show the relevance of distribution statements to phonemic analysis. [20 Marks]
5. What is the relevance of prosodic categories to phonetics and phonological analyses of African language, give examples from any of the African languages that you learnt in class. [20 marks]

TIME: 8.00 A.M. - 10.00 A.M.

INSTRUCTIONS: Answer question ONE and any Two others.

1. (a) Illustrate how phonetics and phonology differ in the analysis of human speech sounds. (8 marks)
- (b) With relevant examples explain briefly the concepts of the following three branches of phonetics.
- (i) Articulatory phonetics
 - (ii) Auditory phonetics
 - (iii) Acoustic phonetics
- (7 marks)
- (c) For each of the following sounds provide the indicated articulatory parameter.
- (i) [n] cavity
 - (ii) [ɹ] phonation
 - (iii) [b] stricture type
 - (iv) [ʒ] airstream mechanism
 - (v) [k] place of articulation
 - (vi) [h] manner of articulation
- (13 marks)
- (d) Give an example of a language that exploits clicks. (1 mark)
2. With the aid of a well labelled trapezium, explain how the position of the tongue is used in the analysis of vowel articulation. (20 marks)

(a) Briefly define the term sonority.

(6 marks)

(b) Rank the sounds below from the most to the least sonorous.

[r], [v], [w], [m], [l], [s], [a]

(14 marks)

4. With appropriate examples, discuss any three phonological processes.

(20 marks)

NAMES

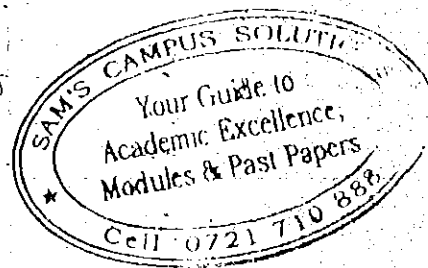

5. (a) Discuss the parameters of initiation in terms of location and direction.

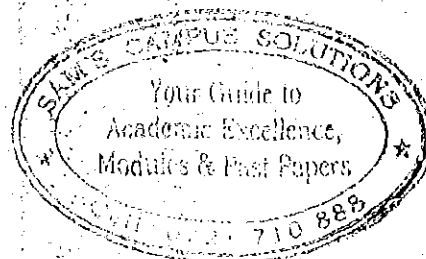

(20 marks)

KENYATTA UNIVERSITY
UNIVERSITY EXAMINATIONS 2017/2018

SECOND SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF ARTS

AEN 301: DISCOURSE ANALYSIS

DATE: Wednesday 18th July 2018

TIME: 11.00a.m-1.00p.m

INSTRUCTIONS: ANSWER QUESTION ONE AND ANY OTHER TWO QUESTIONS.

1. Study the text below and answer the questions that follow.

The term 'digital divide' may be taken at the broadest level to refer to the gap between those individuals and communities who own, access and effectively use ICT and those who do not. However, it is often employed in a generalised way which masks its complex and diverse nature. This detracts from more informed and coherent debates surrounding its existence and extent. The definition has become unclear, and it is recognized that there are now multiple 'digital divides'.

As the range of ICT and its capabilities increases, what constitutes this 'divide' and how to measure it becomes unclear. It is possible to dispute the size, characteristics and reality of its existence, and hard to clearly measure any progress made in reducing disparities. More clear definitions and measurement criteria are needed in order to assess the effectiveness of policies and initiatives adopted. The absence of such criteria can leave these policies and initiatives open to criticism and also quite difficult to defend.

- a) Explain why the text above qualifies to be a unit of discourse. (8 marks)
- b) Explain what the term 'ellipsis' refers to and identify TWO illustrations from the text. (4 marks)
- c) The writer has used reference and lexical cohesion to achieve textual cohesion. Identify, explain and illustrate the following:
- i) Any three reference patterns used. (9 marks)
- ii) Any three forms of lexical cohesion used. (9 marks)

Structure
Contextual features
Topic

Effective
Phrase
Open

Lexical
Reference
Substitute
Ellipsis
Verb
Cohesion
He is tall
Yes he is tall

2. Discuss the role of context of situation in the interpretation of discourse. (20 marks)

The same message can be communicated through writing or through speech, yet these two forms are distinct. Citing appropriate examples, discuss any four aspects that make spoken discourse distinct from written discourse. (20 marks)

4. Discuss the features of classroom discourse as propounded by Sinclair and Coulthard (1975). (20 marks)

5. Distinguish the following concepts used in discourse analysis. (20 marks)

- Exophoric reference and homophoric reference
- Theme and rheme
- Constatives and performatives
- Move and act

Spoken → Sounds. Written → graphemes

v) Co-Text and context

Act → AM → Exchange Transactional

FIRST SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF ARTS

AEN 301: DISCOURSE ANALYSIS

DATE: Wednesday, 21st November 2018

TIME: 8.00a.m-10.00a.m

INSTRUCTIONS: Answer Question ONE and any TWO other questions

1. a). With clear illustration, explain how each of the Grice's four Maxims affect speaking turns in a conversation. (10 marks)
- b). Describe with illustration from the text below each of the following types of cohesion in discourse.

i) Reference Cohesion

ii) Lexical Cohesion

(10 marks)

Bodaboda operators stormed an Embu police station to demand a new motorcycle for one of their own. They said two police officers had borrowed a motorcycle from their colleague but lost it. The Bodaboda operators drove into the Manyatta police station in Embu...in scores on Wednesday afternoon demanding that their colleague be given another motorcycle. They created a scene by continuously hooting in the police station. (From, the Star February 6th 2016)

- c) Using the notions SETTING, PARTICIPANT and TOPIC, explain a context of situation in which each of the following (i-iv) can be a communicative event or a discourse (10 marks)

i). *ENTRANCE... EXIT*

ii). *STOP!*

iii). *A: Hi*
B: Hi

iv) *145 Ruiru*

2. With clear description of what linguistic form is, support the view that there is no One-to-One relationship between linguistic form and discourse function. Use clear examples to illustrate your answer. (20 marks)

3. Explain:
- a). the notions of transactional versus interactional function in discourse. (10 marks)
 - b). the concepts of turn-taking and conversational phases in conversation analysis. (10 marks)
4. a). Outline the units of classroom discourse as described by the Birmingham School approach to Discourse Analysis. (10 marks)
- b). Show how the units you have outlined in a) above were adapted to the analysis of everyday conversation. (10 marks)
5. Using relevant examples, explain any FOUR of the following notions in Discourse Analysis.
- a). Perlocutionary act
 - b). Illocutionary act
 - c). Adjacency pair
 - d). Theme and Rheme
 - e). Aesthetic function of language. (20 marks)

OTONDE MICHAEL AWITI

1. a) Cohesion is key in every text. Explain any four categories of cohesive devices showing how each of the categories creates the link between elements in a text. [10 marks]
- b) Briefly explain the difference between linguistic form and Discourse function. [4 marks]
- c) Explain the following as used in discourse analysis.
- i) Speech event.
 - ii) Discourse Analysis
 - iii) Co-text
 - iv) Locutionary act
2. a) Describe with the use of examples from a discourse occurrence each of the following concepts found in the Birmingham School of model of spoken discourse Analysis.
- i) Rank Scale
 - ii) Frame and Focus
 - iii) Exchange Structure [12 marks]
- b) Using the notion topic and turn-taking show how the categories of the Birmingham School of mode and those of Conversational Analysis complement each other. [8 marks]
3. a) Discuss five differences between spoken and written discourse. [10 marks]
- b) Discuss five features that characterize the structure of a conversation. Give an example in each case. [10 marks]
4. Discuss co-operative principle by Grice (1975) highlight the maxims and show clearly how they can be flouted. [20 marks]
5. Using appropriate examples explain five maxims of politeness as postulated by Leech (1983).

4. Critically, discuss the roles of Ababio in Aminata and Segasega in The Successor by Francis Imbuga. (22 marks)
5. Critically explicate the two poems below. Compare and contrast the two. (22 marks)

KELVIN EKALIYO

OTONDE MICHAEL AWITI

Loving You Always A few words to express, the love that I feel. Loving you always, is beautifully real. I love you each morning, from my dreams when I wake. Sweet morning kisses, I get excited to make. I love you at lunchtime, when my hungry soul craves. Each moment with you, my mind passionately saves. I love you each evening, when my body shall tire. Just thinking of you, my heart feels the fire. I love you at night, when the world is asleep. This love that I feel, is eternally deep. Loving you always, from morning till night. Brings joy to my life, and lots of delight. by anitapoems.com	Give It Our All Let's never give in, to complaints nor fear. With our eyes on our goals, the right direction we steer. No matter the circumstances, with great effort we should always try. We must pick ourselves up, when we get bruised and we cry. Opportunities are plentiful, let's just open our eyes. Our dreams we shall nurture, as we stare to the skies. The trick is to create value, that's honest and real. By following our passions, in our hearts, we shall feel. If we never hold back, and just give it our all. No challenge or obstacle, shall ever be tall. by anitapoems.com

A Time to Dance

I
 You ask me why I sing a song
 To the dead god of a vanished kingdom.
 You ask me why I raise my feet
 To dance the dance of a bygone world.
 You ask me why I drum a drum
 To a god moulding with the passage of time.
 Let me tell you this and tell you once and for all:
 The songs that I sing are no songs to a dead god.
 The dance that I dance is no dance to a vanished kingdom.
 The drum that I drum is no drum to a moulding god.
 I sing songs to the buried bones of the fathers.
 I dance a dance to the stolen bones of the fathers.
 I drum my drum to the sleeping bones of the fathers.
 I have seen them with these my eyes in their winding sheets.
 I have seen them displaying in Rome, London and Paris of the
 Eurodis.

II
You ask me why I dance a dance
To the scattered bones of the ancient kingdom..
You ask me why I sing a song
To the dead ears of a dead kingdom.
You ask me why I drum a drum
To the buried bones of the ancient kingdom.
The song that I sing
Is a clarion call to the scattered bones.
The drum that I drum

76

Is a crying knock at the gates of the buried kings.
The dance that I dance
Is a guiding step to the captured bones.
The song that I sing
Will open the ears of the scattered bones.
The dance that I dance
Will guide them back to the ancient walls.
The drum that I drum
Will wake the sleeping kings and dispel their centuries of sleep.

III
And indeed there will be time,
There will be time
To see the stolen bones
Dancing the dance of return,
There will be time
To see the buried bones
Unwinding the winding sheets
And shaking their heads to the rhythm of the drum.
There will be time
To hear them singing the joyful songs of the ancient kingdom.
And indeed there will be time,
There will be time to sing and dance and drum
To the rising glory of the ancient kingdom.

KENYATTA UNIVERSITY

UNIVERSITY EXAMINATIONS 2014/2015

DIGITAL SCHOOL OF VIRTUAL AND OPEN LEARNING

SECOND SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF ARTS
AND BACHELOR OF EDUCATION

ALT 201: EAST AFRICAN POETRY AND DRAMA

DATE: SUNDAY, 3RD MAY 2015

TIME: 11.00 A.M. – 1.00 P.M.

INSTRUCTIONS:

Answer Question ONE and any other TWO. Do not use a text more than once.

1. **Compulsory**

Making reference to both a poem and a play studied in this course, explain how East African poetry and drama have been used to represent experiences in the region.

(26 marks)

2. How does characterization in Ebrahim Hussein's *Kinjeketile* contribute to dramatic action in the play?

(22 marks)

3. John Ruganda's *The Burdens* is a play of intense conflicts. Discuss the nature of these conflicts and show how they are resolved.

(22 marks)

4. Discuss the contribution of Francis Imbuga to East African drama. Give adequate examples.

(22 marks)

5. Make a critique of the two poems attached showing how the poets have used poetic style to communicate their message.

(22 marks)

OTONDE MICHAEL AWITI

MARJORIE OLUKHE MACGOYE

Kenya

AA

Shairi La Ukombozi

In the Swahili mode. A plea for the release of Ngugi wa Thiong'o.

There is a time for mourning, there is a time for singing,
the tension of the airy wires, the war of rumours ringing
a song of absent virtue, a song of hope tormented,
a song of passions set in bonds and pressures unrelented.
There is a time for mourning, there is a time for singing.

The land is still alive so there never can be silence.
Even as we discern the termite lines all piling
grain upon grain, although unheard by us, the clatter
of particles in motion should be enough to shatter
the land still so alive there never can be silence.

Twigs crackle underfoot. Small forest creatures rustle
around below. Above pale scrawny figures hustle
sunwards in competition. The brittle branch keeps creaking
in sign that it is passive, dead enough for breaking.
Around, below, above, pale scrawny figures hustle.

Water runs from the mountain, gurgling and promising
joy. Water grows us food, but there is something missing.
Streams harden into tunnels. The water disappears
and gasps in hidden pipes. Fields require more than tears.
Streams harden into tunnels. The water disappears.

Voices shout brothers' greetings, echo on hill and valley
suddenly silenced. Naked humans we never rally

except encased in metal, mud and the safely printed
word where the breathless speak, who overturned, who
sprinted.
. Suddenly silenced, naked humans we never rally.

We miss a living voice, a dour and stocky presence,
abrupt in speaking, vivid, impatient of pretence,
a heavy head, a heart heavy with understanding.
We are too tame for lions. The pride has been disbanding.
We miss a living voice, a dour and stocky presence.

Fathers, our land is wide, compassing many peoples
of tough or tender hide, of feature varied deeply,
each with his hopes and fears, each with his coloured cattle
as various as the words which once could woo to peace or battle.
Each with his hopes and fears, each with his coloured cattle.

Is each not free to name the ox-name of his kinsmen?
May he not call upon the circumciser he has chosen?
Can he not don the cross and robe of his election?
Must he withdraw from men, fear the road's intersection?
May he not don the cross and robe of his election?

We hear the cricket chirp, the migrant cattle lowing,
the thunder of the tides, the feet of women going
in ageless search of water, cowbells, the dogs at mating,
the nightclub beat, school's buzz, all save the voice creating.
The nightclub beat, school's buzz, all save the voice creating.

There is a time for mourning. There is a time for singing.
The land is still alive, so there never can be silence.
Is each not free to call the ox-name of his kinsman?
We miss a living voice, a dour and stocky presence.
There is a time for mourning. There is a time for singing.

putting
She is Everything

(FREDDY MACHA)
- TANZANIA -

light the cigarette you want to smoke
light the oven for baking bread
put on the switch for you want the car to move . . .

she is that fire!

stretch out your hand to greet a friend
stoop down to pick a bucket of water
wake up for you must go to work

she is that motion!

take the guitar; and the drum for its time to play music
stretch out your hands to embrace the one you cherish
have the indian ocean blow its breeze on you at night

she is that mood!

put your hands in your pocket where there is money
let the doctor put on a POP¹ for your hand is broken
stand up to challenge an opponent

she is that strength!

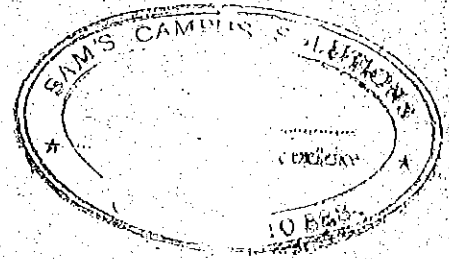

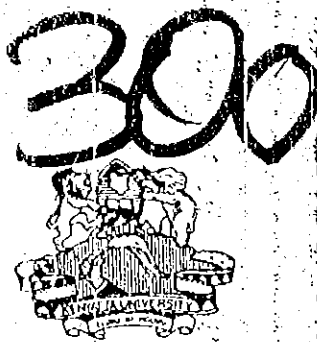

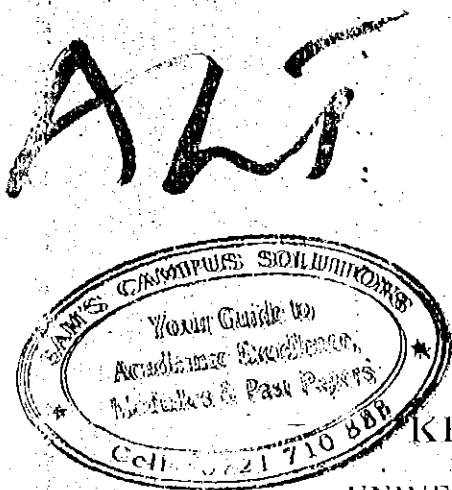

look down on your feet for times are bad
stand up for you have heard enough of a lie
be enraged at injustice; gleeful at the falling of tyranny

she is that feeling!

SHE IS THE FIRE!
SHE IS THE MOTION!
SHE IS THE MOOD!
SHE IS THE STRENGTH!
SHE IS THE FEELING!
SHE IS THE NEED YOU MISS!
SHE IS THE WOMAN!

¹ POP: plaster of Paris.

NIGHTFALL IN SOWETO (By Oswald Mbuyiseni Mtshali)

Nightfall comes like
a dreaded disease
seeping through the pores
of a healthy body
and ravaging it beyond repair

A murderer's hand,
lurking in the shadows,
clasping the dagger,
strikes down the helpless victim.

I am the victim.
I am slaughtered
every night in the streets.
I am cornered by the fear
gnawing at my timid heart;
in my helplessness I languish.

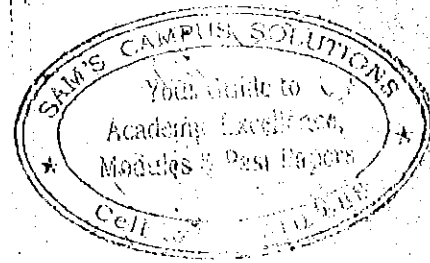

Man has ceased to be man
Man has become beast
Man has become prey.

I am the prey;
I am the quarry to be run down
by the marauding beast
let loose by cruel nightfall
from his cage of death.

Where is my refuge?
Where am I safe?
Not in my matchbox house
Where I barricade myself against nightfall.

I tremble at his crunching footsteps,
I quake at his deafening knock at the door.
"Open up!" he barks like a rabid dog
thirsty for my blood.

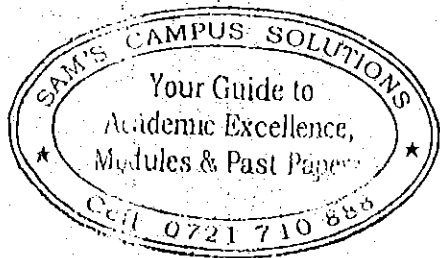

Nightfall! Nightfall!
You are my mortal enemy.
But why were you ever created?
Why can't it be daytime?
Daytime forever more?

3. Attempt a comprehensive discussion of "Lexical variation", showing the contribution it makes to the linguistic richness in Literature. [20 marks]
4. Define and explain why literary writers sometimes deploy some semantic absurdities in their literary texts. [20 marks]
5. In plays and poems especially, which phonological features are given prominence and why?
6. Attempt a comprehensive stylistic analysis of any ONE of the following two poems.

OTONDE MICHAEL AWITI

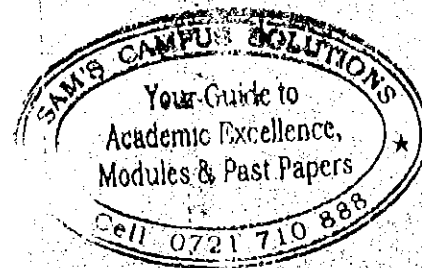

(i)

Annabel Lee by Edgar Allan Poe

It was many and many a year ago,
In a kingdom by the sea,
That a maiden there lived whom you may know
By the name of ANNABEL LEE;--
And this maiden she lived with no other thought
Than to love and be loved by me.
She was a child and I was a child,
In this kingdom by the sea,
But we loved with a love that was more than love--
I and my Annabel Lee--
With a love that the winged seraphs of heaven
Coveted her and me.

And this was the reason that, long ago,
In this kingdom by the sea,
A wind blew out of a cloud by night
Chilling my Annabel Lee,
So that her high-born kinsman came
And bore her away from me,
To shut her up in a sepulchre
In this kingdom by the sea.

The angels, not half so happy in Heaven,
Went envying her and me:--
Yes! that was the reason (as all men know,
In this kingdom by the sea)
That the wind came out of a cloud, chilling
And killing my Annabel Lee.

semantic means?

11/11/2018

11/11/2018

2018

But our love it was stronger by far than the love
Of those who were older than we--
Of many far wiser than we--
And neither the angels in Heaven above,
Nor the demons down under the sea,
Can ever dissever my soul from the soul
Of the beautiful Annabel Lee:--

For the moon never beams without bringing me dreams
Of the beautiful Annabel Lee;

And the stars never rise but I see the bright eyes
Of the beautiful Annabel Lee;
And so, all the night-tide, I lie down by the side
Of my darling, my darling, my life and my bride,
In her sepulchre there by the sea--
In her tomb by the side of the sea.

THE GARDEN OF LOVE

William Blake

I went to the garden of Love, -- *Sarcasm*
And saw what I never had seen:
A chapel was built in the midst,
Where I used to play on the green.

Religion
And the gates of this Chapel were shut,
And "Thou shalt not" writ over the door;
But so many sweet flowers bore; -- *perception*

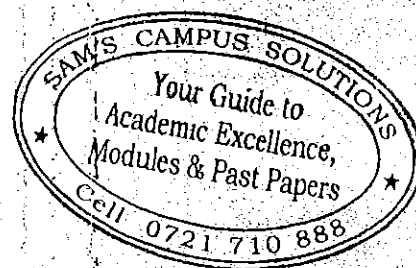

Repression
And I saw it was filled with graves
And tombstones where flowers should be;
And Priests in black gowns were walking their rounds,
And binding with briars my joys and desires.

Song of the Lotus Eaters
There is sweet music here that softer falls
Than petals from blown roses on the grass,
Or night-dews on still waters between walls
Of shadow granite, in the gleaming pass;
Music that gentler on the spirit lies;
Than tired eyelids upon tired eyes;
Music that brings sweet sleep down from the blissful skies.

Here through the moss the lilies creep,
And in the stream the long-leaved flowers weep;
And from the craggy ledge the poppy hangs in sleep.

TIME: 8.00 A.M. - 10.00 A.M.

INSTRUCTIONS:

Answer TWO Questions from SECTION A.
Question FIVE in Section B is compulsory.

1. (a) Stylistic analysis is a form of literary analysis but with emphasis on a text's language. Explain what you understand by this statement. (10 marks)
- (b) The word 'style' has several related meanings in the context of literary criticism. Using relevant literary examples, explain at least four such meanings.

(10 marks)

2. Using illustrations from a text studied in this course show how a consideration of a writer's syntactic choices can be a means of analyzing characterization in a text.

(20 marks)

3. "A writer cannot create an entirely new language. He has to respect the fundamental rules of the language he uses" Defining clearly what is meant by deviation and conformism in literary stylistics.

(20 marks)

SECTION B

4. Explain in what ways semantics helps us to understand the relationship between form and content in a work of art. Refer to a text studied in this course.

(20 marks)

Compulsory By use of examples from suitable literary texts, show how a writer's lexical variation can contribute to the development of a specified theme.

(20 marks)

6. Offer a critical stylistic analysis of the poem attached below by Henry Barlow, a Ugandan poet.

(20 marks)

OTONDE MICHAEL AWITI

BUILDING THE NATION

By Christopher H. M. Barlow (Uganda)

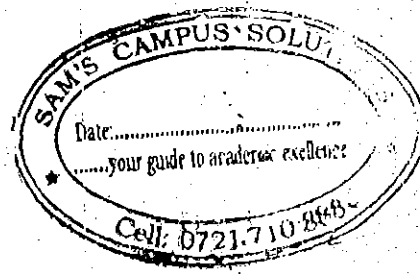

Today I did my share (a)
In building the nation. (b)
I drove the permanent secretary (c)
To an important urgent function. (d)
In fact to a luncheon at the Vic. (e)

The menu reflected its importance (f)
Cold Bell beer with small talk, (g)
Then fried chicken with niceties (h)
Wine to fill the hollowness of the laughs (i)
Ice-cream to cover the stereotype jokes (j)
Coffee to keep the PS awake on return journey (k)

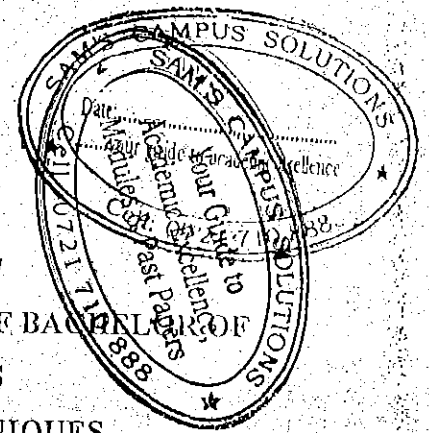

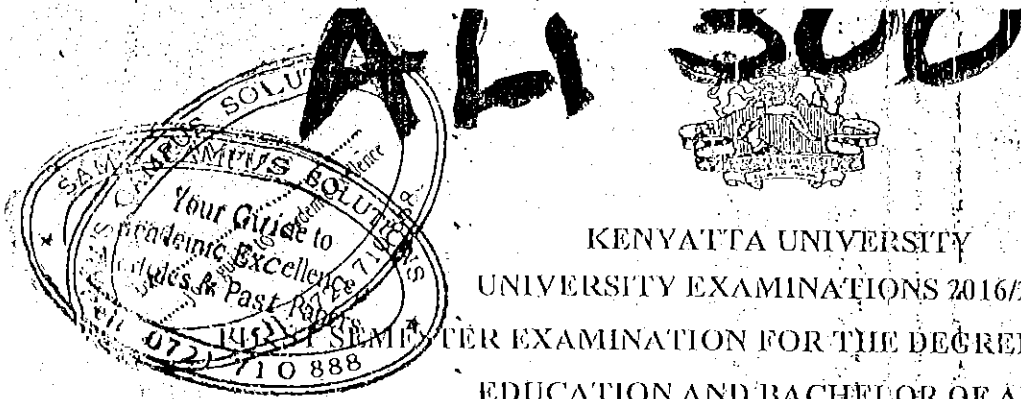

I drove the permanent secretary back. (l)
He yawned many times in the back of the car (m)
Then to keep awake, he suddenly asked,
Did you have any lunch friend?
I replied looking straight ahead
And secretly smiling at his belated concern
That I had not, but was sliming!

Upon which he said with a seriousness,
That amused more than annoyed me,
Mwananchi, I too had none!
I attended to matters of state.
Highly delicate diplomatic duties you know,
And friend, it goes against my grain,
Causes me stomach ulcers and wind.
Ah, he continued, yawning again,
The pains we suffer in building the nation!
So the PS had ulcers too!
My ulcers I think are equally painful
Only they are caused by hunger,
No sumptuous lunches!

So two nation builders
Arrived home this evening
With terrible stomach pains
The result of building the nation -
-Different ways.

DATE: MONDAY 28TH NOVEMBER 2016

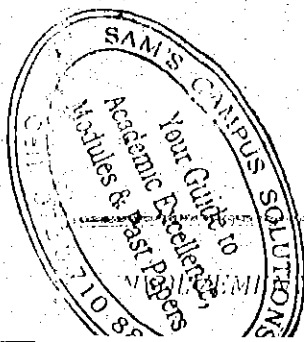

TIME: 2.00 P.M. - 4.00 P.M.

INSTRUCTIONS

- Answer THREE questions in total: two questions from section A and question 6.
- Avoid duplication of material.

SECTION A

- 1) "Modern Stylistics is a product of an evolutionary process". Outline the major developments in Stylistics since its beginning. (20mks)
- 2) What are 'Suprasegmentals' and why are they significant in literary studies? (20mks)
- 3) "Because of its nature, semantic deviation is the most direct, the most daring and the most 'flagrant'. It compels us to re-examine the meanings of words and the experiences they represent." With literary examples, react to the above contention. (20mks)
- 4) What is your understanding of the term "Rhythm" in Literature. Clearly outline its manifestations in literary works and explain why literary writers resort to such rhythmic effects. (20mks)
- 5) Syntactic Parallelism takes many forms. Identify and exemplify at least three of these forms and explain why writers employ them. (20mks)

SECTION B: PRACTICAL STYLISTIC ANALYSIS (COMPULSORY) (30 marks)

6) Present a stylistic analysis of the following passage

conclude

Genesis

imagery

By Shemu Joyah

In the beginning there was nothing. All was space, and space was everything. The space was infinite: it was without measure; it was without limit. And in that space was God. She was without measure; She was without limit. She was everything in the vast nothingness. God was space and space was God. metaphor

Then God said, 'Let there be a Bang' and there was a Bang. (The Bang started small, swirling round and round, getting bigger and bigger, spreading out its energy and masses in the vast, limitless space.) God saw that it was good.

In the whirling masses of gas and energy, God said, 'Let there be suns; stars and planets,' and there were suns, stars and planets. As the suns and stars burnt on and the planets cooled, God saw that it was good.

One cooling planet attracted God's attention. It was neither too big nor too small. It received just enough light from its sun and had water, clean and fresh, and had land and rocks protruding from the seas.

Then God said, 'Let there be life on that planet,' and ferns, grass and trees started to grow on the planet. Fish swam in the waters, animals walked on the land and birds flew in the air. God saw that it was good and She called the planet Earth.

As time went by, God saw that there was something missing on the planet. The animals behaved by following their instincts and the plants were static. It was becoming repetitive and not so exciting. 'Maybe there is need for a leader to guide and direct the other animals,' She thought.

God began to look for the animal that would lead the others. However, none of the animals had the right balance of temperament and intelligence to lead effectively. The lion was too aggressive and the elephant rather dull. The monkey was too clever and unreliable and the snake too poisonous. The tortoise was intelligent but it was too slow. The rabbit was also intelligent but too small. None of these animals had the right combination of qualities to become leader. And therefore God said:

'Let Us make an animal in Our own image, according to our likeness and let this animal have dominion over all other animals and everything on earth. Let the animal, like Us, have the powers to lead; to choose and above all, let the animal have the powers to create.'

Then a gentle wind started blowing, gradually increasing into a massive whirlwind which heaped a mound of earth onto a flattened rock. Leaves broke off from trees, swivelled in the wind, and came to rest on the mound of earth, partially covering it. A dark cloud gathered above the rock and then a bolt of lightning flashed down from the

EFN 102: HISTORY OF EDUCATION

TOPIC 1

INTRODUCTION: DEFINITION AND ROLE OF HISTORY OF EDUCATION

INTRODUCTION

The course in History of Education aims at helping a professional teacher or a teacher trainee to understand how education has evolved over time.

The objectives of this topic is to enable the student teacher to:

- a) Understand components of factors that constitute the discipline of History of Education.
- b) Describe the role and the importance of studying History of Education
- c) Understand the scope of the discipline of History of Education

History

It has been defined as the record of all past human experiences. It shows how various people are and how they came to be. It deals with event such as social, economic, political, scientific and technological which have shaped, fashioned and given rise to mankind.

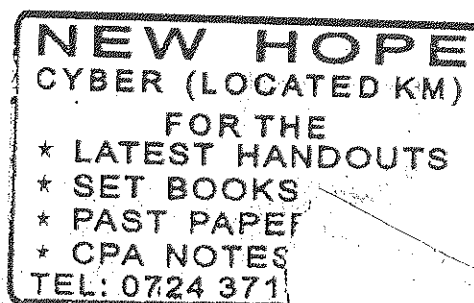

Education

Education refers to the entire of developing human abilities, potentialities and behavior. It is an organized and sustained (continuous) instruction meant to transmit a variety of knowledge, skills understanding and attitudes necessary for the daily activities of life.

This is a social process through which an individual person attains social competence and growth with a selected, chosen and controlled institutional setting.

History education

This is the study of the past educational developments especially of educational systems, theories, and institutions with the general historical context of social, economic, political,

cultural, and scientific and technological change. It is good to note that there is no one accepted definition of education and thus scholars have given a number of definitions.

It is also defined as the study of our present educational institutions, theories, policies and practices in the perspective of their historical evolution or progress.

REASONS/IMPORTANCE FOR STUDYING HISTORY OF EDUCATION

- ❖ History of Education prepares teachers to examine in a historical context some of the educational problem facing the society today.
- ❖ Helps teacher in training to appreciate the past educational process in order understand the process.
- ❖ Helps in strengthening the competence of teachers.
- ❖ Since most of these problems and issues have their roots in the past, their evaluation in the light of their historical development would contribute to a better understanding of their nature and suggest possible solutions. History provides a rich conflicting and complimentary answers to them. Acquaintance with one proposed solutions should be of great importance to the education in working out problems.
- ❖ History of education helps in developing professionalism in teachers. Through study of history of education, teachers are able to develop a person point of view of education. Some of the questions answered by HE include: those on guiding principles of curriculum development and nature of a child.
- ❖ History of education allows a study of educational successes and errors of many years in succession; hence providing opportunities for comparison and contrast in evaluating the relative worth of conflicting educational theories and practices. Acquaintance with the errors of past centuries reduces chances of repeating them.
- ❖ A historical study of educational theory and practices leads to a better understanding of the relationship between theory and practices. It helps us see the foundation of educational practices in educational theories as well as the social ideas. Acquaintances with great teachers and educationist of all ages like Buddha, Plato, Socrates, Pestalozzi,

Montessori Rousseau or Dewey should reassure us that as teachers we are in good company. We are inspired by historical examples of these master teachers.

- ❖ The study of the past has crucial relevance to the task of improving the quality of education in the present. Provides educators with the creative knowledge to improve the quality of education since it enables broader understanding of our system of education better.
- ❖ Thus an intelligent study of history of education has an important bearing on the way in which teachers conduct their personal and professional activities.
- ❖ History of Education contributes to the professional competence of a teacher by encouraging him/her: to examine, evaluate, accept, reflect or modify the cultural inheritance, become an educational critique and an agent responsible for cultural transmission and change, rather than to blindly accept the status quo.
- ❖ HE allows studying the motivation and behaviors of the social, economic, religious, scientific and educational aspects of concrete historical situations. This helps teachers in discerning the various choices that were instrumental in shaping human purposes in the past. Through a critical examination of past actions, the educator can illuminate the possibilities and alternatives of decision making in the present. In other words, an examination of educational theories and practices in their historical context encourages teachers to take a critical look at contemporary theories and practices.
- ❖ The past illuminates the present. HE is an account of the living growth of educational aims, methods, curricula and institutions, without which they would appear static. HE helps in understanding of the aims, methods and existing institutions and thus HE is used in improving the quality of decision making process and policy formulation and strengthening the personal and professional competence of the teachers.
- ❖ HE enables teachers to draw comparisons, that is, to compare the development of several different ideas or problems with one group of people, or of the same idea or problem with several groups of people. One is also able to show one development of a particular theory
- ❖ and practice in a historical context, and demonstrate the particular conditions out of which such a theory arose or the specific function that a practice was intended to serve.

- ❖ HE engenders the spirit of realism. It is impossible to gauge accurately the relevance of previous idea or practice to our own day until we understand both the present context and the original context in which the idea arose.
- ❖ HE develops the power of thinking. Study of successful historians helps us to train and exercise all the essential aspects of intellectual activity.
- ❖ It excites curiosity and the spirit of inquiry, it disciplines the faculty of reason, it cultivates the art of self-expression and communication.

Class Activities

1. Describe what you understand by History of Education
2. Why should student teachers study History of Education?

References

Sifuna D. N & Otiende J.E. (1994) An introductory History of Education, Nairobi, Nairobi University Press

TOPIC 2:

ANCIENT CIVILIZATIONS

OTONDE MICHAEL AWITI

EGYPTIAN EDUCATION

Objectives of the topic

By the end of the topic, the learner should be able to:

- a) Discuss the factors that led to the growth of Egyptian civilization
- b) Describe the system of the Egyptian Education system
- c) Describe the structure of the ancient Egyptian education

Location

Ancient Egypt stretched South to the first Cataract of the Nile, and North to the Mediterranean sea. As a country it was isolated and fortified and thus peaceful for human settlement. Its civilization was a product of the Agricultural activities around the Nile River and those of the emergent political unity and centralized autocratic (tyrannical, oppressive) government which sought to maximize the Agricultural economy.

History

The Egyptian civilization is one of the oldest civilizations in world history. It is almost as old as Mesopotamia which was founded in the 4th Millennium B.C. however Egyptian civilization provides contrast to Mesopotamia since it was characterized by stability and serenity in contrast to the turmoil and tension of Mesopotamia. The Egyptian were peaceful for long periods of time, a factor that helped it to develop and secondly it was helped by good environmental factors. Mesopotamian climate was very harsh and also the country experienced irregular flooding of river Tigris and Euphrates. Thirdly Mesopotamia was located in an open plain hence was not protected from foreign invasions and its inhabitants were always on military alerts, while in Egypt. Egypt was dependent on River Nile which provided a great agricultural wealth. Further the Nile flooded regularly year after year which gave the Egyptian a feeling that nature was predictable. In addition, river Nile was surrounded by deserts and the red sea, Egypt was therefore free from foreign threats and invasion. About 3100 B.C. the kingdoms of upper and lower were united under Pharaoh formerly king of the upper Egypt. The unification marked the end of pre-historic Egypt. After this, historic Egypt is divided into twenty six dynasties ending in

525 B.C. when Persians conquered Egypt. Herodotus, the Greek father of history, considered the Egyptians to be extremely religious. Pharaoh was taken and treated as god on earth, the earthly sun, the godly king. All land belonged to the Pharaoh. Pharaoh ensured that Egyptians gods are worshipped, there being an ultimate link between the religious, the social and the political aspects. Religion was ever linked to art, science and technology. The total number of gods was more than 2000. Egyptian religious life was polytheism, both men and animals being worshipped. The dead were mummified, for the Egyptians believed in physical life-after-death. Death was considered as a kind of a sleep. The dead were believed to go to the field of Reeds, towards the western parts of Egypt. This supported the reasons as to why the pyramids and tombs are found on the west bank of the Nile River. After deaths one lived either in luxury and poverty or were thrown into dark rivers to be eaten by crocodiles. The soul or spirit was expected to return to the body. One was further expected to continue working as was the case on earth. If one had been wealthy, servants, their statutes, food, personal property would also be included in the tomb. Gradually statutes rather than servants took the place of servants. Egyptian society was stratified with the upper class having royal family, the nobles and the priests. The middle class were the professionals and the scribes. The low class included the 'serts' and the slaves.

Education aims

- ❖ The aim of Education was to perpetuate social stability and status quo. Through education process, the various classes were slotted into their social, political and economic life-stations. Education enhanced a socially hierarchical society.
- ❖ Education was practical, technical and professional. It sought to produce professionally and work oriented personnel for prop the social, economic, political and religious structures of Egypt.
- ❖ It fostered the development of a complex agricultural science, creating irrigation and flood control which made Egypt the granary of the world. It was utilitarian in nature producing barley, wheat, broad beans, peas, and onions. They imported ivory, spices and slaves.
- ❖ Education was also religious. Through education Egyptians were helped towards achieving their polytheistic religious ideals. Education sought to enhance their religious

4

morale development and piety to the gods. Education was not only considered as preparation for life, but also as a vehicle for life after death. They developed religious and philosophical studies to retain and strengthen the religious significance of their education.

Methods of teaching/instruction

The dominant methods of teaching were dictation, memorization, copying of texts, imitation, repetition, participation and observation in physical education. They also used apprenticeship and oral traditions to enable them fit into their positions in the society, It is worth noting that these methods did not encourage high level thinking.

CONTENT/CURRICULUM

The curriculum included mastering of symbols and signs of writing unique to the respective social classes, professions, elementary science, arithmetic, geometry, astronomy, music and dancing. Music and dancing was taught for recreational moral and religious training.

Elementary Elementary

Elementary education was structured along the basic needs of the society. By 1000 B.C. formal education was specifically geared to the respective classes of Egypt. The rising economic and political demands called for the service of a force of professionally trained clerks, copyists and inspectors.

By 12th dynasty Egyptians were capable of reclaiming land in Fayum through flood control and partial drainage of I. Moeris.

Agricultural mechanics had also to calculate the size and strength of dykes, ditches, docks, and bridges to be constructed for irrigation purposes. Also trenches had to be dug and wells sunk. All these resulted in a reliable irrigation system which meant extra agricultural products.

The Egyptian scribes wrote down their achievements in science and arts. Boys who had a chance to attend elementary schools learnt hard about these discoveries. The rest of the boys were informally trained by their fathers or masters in skills other than reading, writing and arithmetic. The education was home-based with parents instructing their children.

7

KELVIN EKALIYO

Through apprenticeship and oral traditions, the masses learnt to fit in their station in life. They became future metal workers, plotters, weavers, jewelers, brewers and other craftsmen.

Piety, morality and relevance of the Pharaoh were instructed by the fathers. Girls only received training in domestic arts. Daughters of the nobility and royalty might have received some formal training befitting their life positions.

Slaves were not offered formal training. Elementary schools were first established between 3000-2000 B.C. They were established to offer training in vocations rather than literacy. Writing was restricted to the clergy and in the initial years only their sons were exposed to reading and writing under priests in temple schools.

Out of the utilitarian reasons, the nobles, the military, civil servants and commercial classes in court, military, departmental schools respectively had to learn how to read and write. Courses of instructions included reading, writing, arithmetic, story-telling, swimming, dancing, manners, political social and moral education.

The few boys who were lucky to access schooling started at age of 4 years. The school day was short, boys left at midday. Mastering the symbols and signs of writing peculiar to their respective social classes. Professions or vocations formed the bulk of the curriculum at this level. The curriculum included elementary science, arithmetic, geometry, astrology and music. Music like dancing was taught for recreational, moral and religious formation.

They were prescribed state songs for inculcating the spirit of patriotism and political awareness in the incoming youth. Egyptian education did not emphasize higher level thinking problem-solving and teachers hardly explained their lessons to the students.

Elementary education had fixed teaching methods such as dictation, memorization, copying of texts, imitation, repetition, to observation in physical education.

School discipline was harsh and ruthless. Laziness was not tolerated and severely punished. Good manners, uprightness, physical fitness through swimming, wrestling, and cleanliness were emphasized.

Elementary education lasted up to the time the boys were 14 years of age, when they once considered prepared for the world of work.

Secondary Education

Took place on the same premise as elementary education. Writing featured prominently. It paid considerable attention to refining the style and composition of the art of writing. However, there was no great departure from elementary education, secondary education being continuation, improvement and consolidation of what had been started at the previous level in terms of literacy and craftsmanship. The exception was that the upper classes informally participated in activities that fostered their code of behavior and etiquette.

Higher Education

It took place in temples, temple colleges or universities. In the region of Amenhotep IV on the east bank of the Nile, there was a kind of university the house of life. Higher education was meant to instruct both the priest and professionals. HE was guarded secretly and informally passed on to immediate relatives and colleagues and social equals. It was restricted to those acknowledged to inherit it by virtue of birth. This was strikingly so in priest craft and medicine which were highly demanded by the Egyptians. Professionals included teachers who used their homes, their offices, business premises and temples to impart knowledge of literature, history, science and skills to Egyptians youths. Becoming a scribe meant going through demanding instructions in order to master the skills of scribes. Scribes were graded serving as mere secretaries, book keepers to bring highly placed as learned judges, advocates and advisors to Pharaoh. Scribes were held in high regard, for they were expected to have learnt the specialized skills of writing the religious and business transactions of the Egyptian, history of the deceased. These skills were mastered in special schools for scribes, temple schools, or through apprenticeship under master scribes.

Education and the Course of Civilization

The relevance of Egyptian's educational achievements to the course of civilization are considerable:

1. Science

In the field of science they were most interested in astronomy, mathematics, and medicine

In astronomy they discovered a way of avoiding the imprecision of time and established the best calendar of the time.

2. Art

The modern paintings and sculpture borrowed much from Egyptian's models and initiatives. Egyptian's art was brightly colored, depicting its religion, industries, sports and amusements.

3. Literature

It involved use of proverbs in perpetuating Egyptian's culture. It was didactic, teaching conduct and morals. This is highly used in today's literature.

3. Architecture

Building of the first pyramid was done in Egypt. They were the first people to use mass with stone, copying the massive desert cliffs and mountains.

4. Arithmetic System

Modern mathematical notations and arithmetic calculations owe a lot to the Egyptian's initiatives. They discovered the best methods of measurements. They were the first to mark off a 360 degrees to a circle and also first to notice that the ratio of the circumference of a circle to its diameter is the same to all circles. They also devised means of computing the areas of triangles, the volumes of pyramids and cylinders.

5. Medicine

The Egyptians believed that diseases came from natural rather than supernatural causes. They insisted that physicians should provide accurate diagnoses and reliable treatments. They prescribed castor oil. They wrote a book of surgery which reflects their keenness to observe and experiment in the field of medicine. Aided by the unique climate the Egyptian's developed and refined skills for mummifying bodies and preserving them for centuries. Their mortuary practices show their advanced know-how in corpse preservation.

6. Writing

One of the greatest intellectual accomplishments of the Egyptians lay in their system of writing. They established the first form of writing (hieroglyphic), The Egyptian's developed sacred curving, including a sound based syllabic system. Their writings used pictographs, ideographs and phonetic representation. They knew the alphabetic principles but they did not put it to use. They wrote on stones, papyrus and metals using ink from gum and pointed reed pens. They influenced the earliest known writing materials.

Class Activities

1. Discuss the political, social and geographic factors that contributed to the growth of Egyptian civilization
2. Discuss the lasting contribution of ancient Egyptians to the development of theory and practice of modern Education.

EDUCATION IN ANCIENT GREECE

The objectives of this topic are to:

- a) Analyse the education system of ancient Greece
- b) Explain the relevance of Greece education to the modern system of education

Introduction

Greek civilization grew on a rugged (harsh), mountainous Greek Peninsula with its numerous steep valley and irregular coastline and many islands. Greece was sparsely populated except for some few City-States. Greece people were bound by common ancestry, race, language and religion. Otherwise they were disunited due to individualism on the part of the people, parochial (close minded) political feelings, tribal origins and petty laws. Except during extreme danger, Greece people did not co-operate. It was made up of independent city states and each city state had its own system of education.

Sparta and Athens were the best known city states because of their organization of state craft.

By 546bc Sparta was the strongest power in ancient Greece, with a good standing army, a sound agricultural economy and a stable constitution.

By 510 bc Athens had developed one of the learning centres of commerce and established colonies around it, above all the two cities had clearly spelt out education systems.

Politically, the ruling classes were dominant. One had to be born, and receive proper education to become a citizen. Only male citizens' held offices, received court protection, owned land and attended public assemblies (rallies). Religion, festivals and rites were reserved for the citizens. Greeks were polytheists. There were two classes of people the freemen and the slaves

Ideally the ancient Greek education is like speaking about the ideas expounded by Socrates, Plato and Aristotle

Education

Education offered involved tribal (ethnic, family, ancestral) customs and moral instruction of father to son orientation. Their civilization was not as religious as that of ancient Egypt, India, China or Hebrews. It was more civil oriented.

Priests had no special link with learning

Education sought to produce perfect citizens, and emphasized on civic manhood, individual excellence, and public usefulness. Beauty and music was taught for the enrichment of the soul.

CONTENT

The content of Greek education fell into two eras: old and new.

The old era was discipline and theological oriented represented by the Spartan Education. Gymnastics, music and letters were prominent.

The new education which was scientifically oriented was represented by the Athenian Education

Spartan Education

The aim of the Spartan education was to produce soldiers and warriors. Spartan built up a powerful military machine to fight both internally and externally.

To foster obedience and loyalty to Sparta were highly emphasized.

Virtues that were cultivated in the Spartan education included being modest (humble and unpretentious), revering, cunning, enduring, hardy, strong, social, and controlling.

Reading and writing were not prominent though they were taught. Singing and poetry constituted the Spartan education. The laws of Lycurgus (850B.C.) had also to be memorized. Lycurgus had consolidated the Spartan system of education in his constitution. The government controlled education to ensure that it served their military socialistic interests.

Education was religious and aimed at producing god fearing, morally upright citizens with socialistic views.

13

KELVIN EKALIYO

The curriculum was dominated with physical and moral subjects. At home mothers and slaves were responsible for family education. This consisted of games, stories, singing, insistence, on correct behavior and obedience varying the unsystematic activities of family education.

Military efficiency was emphasized. Rigidity severity and strictness characterized the Spartan education masters who concentrated on the art of war. Spartan armies were highly trained and swore to either die or win. They were not to retreat (run away) in war.

Severe discipline was stressed with graded gymnastic courses. Intellectual education consisted of some informal training. Both Spartan boys and girls were offered instructions in gymnastics (aerobics/physical exercises). The purpose of offering Spartan girls and women gymnastic training consisting of singing, dancing, jumping, running, ball playing and wrestling. This was to ensure that they were strong, and thus able to produce strong brave and resolute men. The idea was also to produce mothers of warriors. However, the girls received their training at home not in 'packs'. Every elder was a teacher and every Spartan boy had a tutor. Women education was equivalent to that of Spartan men except in the area of preparation for public affairs.

Spartan education was also aimed at maintaining the status quo.

Without one undergoing proper statutory training, one was excluded from being a member of the citizens clubs or being allowed to own state land. At birth infants were inspected by the state. They were exposed to ice and snow in the mountains so that misfit would die.

When boys reached the age of eight, they were taken from their mothers and put into 'packs' and companies. They started living in public barracks. The most courageous and resourceful boys led the pack acting as a non commission officer. A young man between twenty and thirty years of age trained the 'pack' in stealing and judgment. In the barracks they ate small course ratio for diet discipline, had scant clothing, hard bed, bathed in cold water and were beaten by elders. Life in the barracks emphasized a hardened existence. There were regular military drills, swimming, hurting, running, leaping, boxing, wrestling, military music, bull playing and dancing. 18

At 18-20 years Spartan boys became cadet-citizen and were relieved of manual tasks. They began professional studies in warfare. They were frequently whipped so as to instil courage and endurance in them. They were posted in the country on secret service in murder game whereby

they discover clever slaves and eliminate them. Just before entering manhood Spartan boys were flogged at the sanctuary or altar. There was a prize for the one who could withstand the greatest number of beatings without flinching or crying. At 20 years of age, Spartan young men were eligible for election into citizens clubs, but it took them 10 years to be fully fledged citizens of Sparta. Then they are forced to marry and continue to live communally in the public barracks. However, they continued with welfare drills in order to be kept in a status of preparedness, until they are unable due to old age.

ATHENIAN EDUCATION

The new education which was philosophically peace –war oriented was represented by the Athenian Education. In this are mathematics, geometry astronomy and philosophy was taught. This education was scientific rather than theological. It sought to bring individual freedom, free reflection and democracy. Although the state supervised education, every citizen was free to arrange for his sons (Liberal) education

Athenian considered their state supreme. They also felt that individual actualization or fulfillment was equally good for the state. Therefore Athens had a lot of freedom for the individual. Athenians education was literacy oriented. (music singing, memorization, to produce an all round education) gymnastics

Athenians were creative, imaginative, and artistic. The education was general, broad, liberal and elitist. The training of the body was linked to the training of the mind so as to achieve physical and intellectual excellence. Athenian education sought to foster science and humanities. They were weak on scientific application, though many of the theories that have shaped scientific progress were developed by them. Athenian teachers were self employed, living on fees paid by their private students. (teachers)

At birth the infant was examined and the father decided whether it was to be exposed to ice or spared. Then, the baby underwent recognition and acceptance in tribal ceremonies. Until the age of 7 years, both boys and girls grew together in their homes where they were taken care of by their nurses and mothers. Girls received whatever little education there was for them in seclusion, in their homes learning household art. Music formed part of the girls home based education. Athenian girls had no access to formal education outside their families. Only boys had

15

access to public formal instructions. The Athenian girls and women were not given the 'privileges' of citizenship and belonged to the alien class. At the age of 7 years, Athenian boys had two kinds of training schools.

- a) Gymnastic or wrestling schools for physical training exercises. The physical exercises included good department light physical drills, bull playing, jumping, wrestling and discuss throwing. This training prepared the boys for both the war and also helped develop their bodies. The school day ran daily except during state holiday. Discipline at school and at home was severe corporal punishment being literally given. The Athenian boys had at-least two teachers. The first teacher, the grammatist taught them reading, writing, counting, music and literature. The second teacher instructed them in physical training. The school master dictated and the boys wrote down and memorized the dictation. The teaching of reading centered on learning letters, followed by syllabuses and learning words. Special attention was paid to reading well through accentuation, articulation and recitations.
- b) For language, drills enhanced the boys power of memory and imagination. Music for emotional, civic and moral development was never ignored. It was linked to literacy instruction being for moral instructions. Learning how to write consisted of using the stylus to trace letters out in wax tablets, copying exercises, writing on the knees, learning writing with ink on papyrus. Old slaves (pupils attendants) carried boys books to the school masters place. The boys were trained to be gentlemen, moral and righteous.

All education before age 15 years was offered in private schools, which were not controlled by the state. After 15 years, sons of wealthier classes received education in physical training in the public gymnasia to fit themselves for legislative, judicial and military duties. All these activities took place in public in the open air. They were least influenced by their families or homes. They were free to go anywhere in the city (theatre, regular assemblies, street and law courts) to acquire themselves with matters of public life. Life was considered the real educator of Athenian youths and fathers were held responsible for their boys' behavior. Being considered preparatory training for state service then it received state support. At 18 years of age an Athenian youth needed the age of maturity of becoming a citizen. After that they are enrolled in the demes, presented as a

candidate for citizenship to the assembled people, examined morally and physically and took an oath of loyalty to the Athenian state. Thus one becomes a citizen novice cadet ready for two years under a teacher and state census of providing military service. The military service included drilling, gaining military tactics, acting as a border militiaman or mounted policeman and taking part in religious festivals.

AIMS OF ATHENIAN EDUCATION

- ✓ The aim of Athenian education was to produce an all rounded so that students would know something about a wide range of subjects and be able to appreciate many things. Students were not concerned with specialization or preparation for any specific job
- ✓ Boys attended school between the age of 7 to 14 years
- ✓ All schools were private and parents had to pay to send their children to school
- ✓ The fees that were paid were very low to allow the poor people to afford education
- ✓ Schools were mostly one room area open to the streets on one side
- ✓ Equipment were minimal students sat on benches and held their work on their laps
- ✓ Teachers were often retired military, discipline was strict, beating was given not only for mis behavior but also for careless mistakes
- ✓ Students studied their main subjects grammar music and gymnastics
- ✓ Education was geared to produce fit people with sound mind and sound body
- ✓ Once through with basic education students would go for higher education in one of the schools of the philosophers
- ✓ From age 18 to 20 all able bodied youths were to take military training for the army or navy
- ✓ Books were expensive and rare so the subjects were read out loud and the boys had to memorize everything

METHODS OF TEACHING

Logical argumentation

17

Lecture

Question and answer

Role modeling/playing

Memorization and recitation of texts

COMMON ASPECTS

Focusing moral uprightness, education for boys ex,

Discipline was vital, corporal punishments was for boys and girls

Physical exercises were highly valued

Examination were in both systems and it was a must for one to pass, in Sparta for example if one failed one would belong to the middle class, who could own property, have business but no political rights and were not citizens

Girls' education was left for the mothers at home attended formal education

Both went to barracks at certain time

Physical education was emphasis

Class activities

Inculcated the spirit of patriotism (how to be patriotic)

Emergence of school- Universities, colleges and primary schools ()

1. Discuss the major differences and similarities between the Education system of your country and that of ancient Greece.

EDUCATION IN ANCIENT ROME

*Christian
educ*

181

The objectives of this topic are to:

- a) Analyse the education system of ancient Rome
- b) Explain the relevance of Roman education to the modern system of education

Introduction

In 400 B.C. Rome was among one of the several small Latin City-States that existed on the Italian Peninsula. Between 509 B.C. and 250 B.C. the rural land owning Patricians established an oligarchy Republic of Rome. They elected a 300 member senate, which made policies. These policies were enforced by two elected *consuls*, who served a one-year term during which they exercised executive civil, military and religious powers. There were two classes of people, the freemen and the slaves. Social stratification was common in the Roman society with the poor occupying the lower socio-economic status. They were rewarded with land grants for military service during Rome's wars with its Latin neighbors. They later became dissatisfied with their low socio-economic position and threatened to secede (break away) from Rome and establish their own City-States. Faced with this, the Patricians conceded more political rights to the poor permitting them to elect their own representative assembly and 10 tribunes to represent and safeguard their interests. Although the two classes were rigidly separated during Rome's early history, the social barriers were gradually weakened as some poor acquired commercial fortunes. Some Patricians even intermarried with wealthy Plebians (poor).

Education

The aims of Roman education was to

- ❖ To transmit culture. Life in early Rome was supported by religious, social, economic and political rituals that stressed traditional beliefs and value system. It was the function of education to transmit these traditions to the young.
- ❖ To maintain the status quo of the Roman society. Through participation in the rituals of the society, the young Roman learned to respect the valued traditions and perpetuated

KELVIN EKALIYO

them for the purpose of guaranteeing a stable future. The boy of a Patrician learned to become a land owner, a dutiful citizen and a guardian of Rome's cultural heritage.

- ❖ The main education agency was the home and the father was among the leading educators. The intellectual training of the home did not pass beyond reading and writing and the earliest stages of number work as well as physical and moral training.
- ❖ The education emphasized family cohesion and it was a custom for the young boy to accompany his father in his daily routine and learnt from what his father did. Boys received practical training in farming and military life. Girls learnt that art of home management from their mothers. Poorer citizens were not able to provide effective training for their children as was given in the homes of their wealthy counterparts.
- ❖ Slaves later became the main teachers of the Roman children. This was as a result of military campaigns that meant the Roman State was to expand. The boys still obtained from their fathers the lessons of piety, accompanied him when he offered sacrifices to the gods, listened to accounts told by his father and his acquaintances of the heroic deeds of the past. If his father was a senator, he would go with him to the senate.
- ❖ It emphasized the rule of law. Originating as a society of individual land owner, Roman citizens were keenly conscious of their rights and duties relating to property and inheritance. The law of the twelve tables adopted in 450 B.C. codified the basic legal regulation governing Roman life. The rights and duties of a Roman citizen were clearly defined by legal specifications. The Roman boy had to memorize the legal prescriptions of the Twelve Tables.
- ❖ The early Roman education sought to form the learners' character by inculcating a rigid system of moral values.
- ❖ Apart from reading, writing and arithmetic, physical training included juvenile throwing, sword play, horse riding and weaponry.
- ❖ The father continued to educate his son until the age of 16 when he assumed an adult role. The successful product of early republic education was therefore a highly practical

man who managed his land and supervised his slaves. He was a patriotic citizen who was always ready to defend Rome against her adversaries.

Greek Influence on Roman Education

Roman educational patterns were characterized by the cultural dynamics that were unleashed as Rome moved from a relatively isolated small agricultural city state to a vast empire with overseas colonies. Through a series of defensive wars, Rome conquered the neighboring Latin tribes. Great change occurred during this time. Military operations and the growth of commerce had brought the Roman into contact with the Greeks colonies in Sicily and Southern Italy. The immediate result was that Roman traders and officials found it advantageous to learn Greek. This was intensified by introduction into Roman households of increasing numbers of Greek slaves who had been captured during the war. Hence, the practical interest in the Greek language quickly developed into a desire to acquire knowledge of Greek thought and literature. This led to a growing class of teachers known as writing masters who were often slaves or freedmen. Then followed the language teachers who taught Roman children to read, write and speak Greek. Though the teaching of Greek was at first due to practical interest, it soon developed into a study of Greek literature. Greek represented the language of civilization and culture. It began to penetrate many aspects of Roman life and Greek traders brought with them text books.

The period of the later republic and early Empire revealed two significant developments. The adoption of the Greek ideas was now complete and one of the consequences of the change was the increasing interest in education as shown by the state. The Roman empire showed a considerable interest in educational institutions especially those concerned with higher education. Emperors began to work out a definite educational policy which eventually led to state control of the schools.

There were three stages in the new system of education:

- a) Elementary

It was for boys of 7 to 11 years. By 300B.C. an elementary school had appeared in Rome presided over by a teacher. They emphasized strict discipline and corporal punishment. It was an institution for developing the skills of reading, writing and arithmetic. The emphasis was on acquiring literacy. The boy who attends an elementary school was accompanied by a slave, preferably a Greek who could act as a tutor. These schools were completely private with no state supervision.

b) Grammar schools

They appeared as institution of secondary education. Under the direction of the grammar teacher roman boys from ages 10 to 16 studied Greek grammar, composition, poetry and history. There was also a Latin grammar school which taught the grammar of roman vernaculars. This was a parallel institution to the Greek grammar school and Roman boys were expected to have attended both institutions. As the schools became more formal its curriculum came to embrace all of the liberal arts and included elements of grammar rhetoric, dialectic, arithmetic, geometry, music and astronomy.

c) Higher Studies

Roman youth of ages 16-18 attended the rhetoric schools which appeared in 100 B.C. These were concerned with the education of the orator. Rhetorical studies combined both the Greek conception of the liberally educated man and the Roman emphasis on practicality. Rhetorical studies were quite important for the roman in that speaking abilities helped them to gain control of the crowd, influence voting in the senate and inspire troops. Orators served as a model of the educated man during most of Rome's history. The conception of the orator as a modes of the educated man had Greek roots. Socrates, one of the most prominent of the Greek rhetoricians had an impact on Roman educational theory and practice through his programme of rhetorical education.

Class Activities:

1. Discuss the relevance of the education in Rome to modern day education

TOPIC 3:

EDUCATION DURING THE MEDIEVAL PERIOD

THE RISE OF MEDIEVAL UNIVERSITIES, RENAISSANCE AND REFORMATION

Introduction

The objectives of this chapter are:

- a) Define the term University
- b) Identify the causes of Renaissance
- c) Define and identify the causes of reformation

23

Medieval Education

During the period of 12th century to the 16th century, there emerged movements that had a great impact on the education developments all over the world. These movements were the establishment of medieval universities, revival of classical learning and religious reforms. The major players during this period were the church, Greeks, muslims and Romans. The fall of Rome in 300 A.D (this marked the end of ancient antiquity) was followed by a period of ignorance, lawlessness, and violence. It was the Muslims were to awaken medieval Europe, developing universities in Spain, which in the end led to the rise of medieval universities out of the church controlled cathedral parish and monastic schools.

The fundamental characteristic of medieval education was the domination of religious conceptions (education was for the preparation for the life to come and was based on religious and moral authority. The church-school alliance defined the aims, content, and method of education. It was based on the scriptures and was literary; instructions were dogmatic and arbitrary; had a strong element of abstract theoretical and conceptual) and formal reasoning.

The education ideas of the church were contained in the scriptures which included the Hebrew bible, the Gospel and St Paul's letters. Christianity therefore borrowed heavily from Judaism and among the earliest converts to Christianity were mainly Jews trained in the traditions of Jewish, religion and culture.

The Rise of Medieval Universities

Universities as we all know them today as centres of learning and research did not exist in ancient times although there were centres of learning in some advanced ancient civilizations such as India, China, Rome, Greece, Egypt and Mesopotamia. These centres were gathering of scholars into which great teachers attracted cosmopolitan students e.g. Plato's Academy.

The term university came from a medieval word 'universitas' meaning a group of people acting together or a society. In its original phrase as used in the medieval times university meant a society of masters or scholars.

The medieval university had its origin from the cathedral/monastery schools, these monasteries attracted pupils from far and wide and was a place where students from all parts were received. It offered education of elementary nature but were mainly concerned with instructions centering on the liberal arts. The schools taught Latin, grammar, rhetoric (the art of letter writing and correspondence methods) and logic, arithmetic, geometry, astronomy and music.

A teacher of repute drew around him an increasing body of students

Other teachers of repute would walk around and if they found a student body in place they set up chairs and began to teach, once they came together for the purpose of teaching and learning, teachers and students organized themselves and formed a guild and got a charter

A university then came to be defined as an association of master and apprentices in study or a corporation of scholars

During the 12th C a revitalized form of higher learning evolved as some of the cathedral(monastery) schools developed new methods of teaching and learning; new institutional materials, they

attracted students from far and wide. As time went by the need arose to provide instruction beyond the range of the cathedral schools led to the establishment of universities

During this time too, certain towns such as paris and Rome began to be famed as learning centres and drew students from all over Europe who went there to seek knowledge. In these places lectures were open to anyone from any country without condition. Students therefore gathered in such places to listen, comment, and debate on textbooks and topical issues of their time. Under the charter that universities were given students were granted security when travelling to places to study, they were also protected from unjust arrest.

Factors Leading to Rise of Medieval Universities

1. Scholasticism

By 11th C, theologians had began to concern themselves with serious study of the philosophical problem related to Christian theology. Their studies led to the development of scholasticism as a

25/11

25/11

formal method of inquiry(scholastic philosophy). This new philosophy placed emphasis on reasoning, or logic to the problems of religion and was guided by the church. This new philosophy produced many keen minds and stimulated theological studies in the emerging universities. It became a dominant intellectual and educational methodology in the new universities.

2. Revival of City life, in western European cities

This stimulated growth of higher education and contributed to the development of universities. Since it led to the revival of commercial life, economic revival, and improved travel facilities which led to the rise of universities. The travel to distant lands also excited the imaginations and broadened the minds of those who returned. It raised the general intelligence of Western Europeans, since in their travels they came in contact with Arab scholars, this led to the reawakening of new intellectual life which found expression in the organization of universities.

3. Revival of trade and commerce. Trade fairs and yearly markets brought together merchants from different towns to exchange their ideas. The fairs also provided an opportunity for exchanging ideas and experiences, in their respect, they advanced general knowledge.
4. Improved transport and communication networks. The revival of trade and commerce came with improved Communication between cities in Europe caused the movement of students from one town to another very easy. Medieval universities were able to rise in these towns and cities that had good communication networks such as London, Oxford, Paris etc
5. Contacts with Muslims. Arabs preserved the Greek philosophical traditions and medieval Christians found a model for their universities in the colleges of the Arabs. Indeed, the university of Al-Azhar founded in Cairo in A. D. 940 is considered the oldest existing university in the world. The Arab world served as a granary of classical Greek writings and their translations into Latin by Arab scholars rekindled the banner of intellectualism, which led to the rise of the European universities. Consequently, the rise of European universities coincided with the diffusion of Muslim translations, adaptations and

commentaries on literature, philosophy, theology, science and technology. They had made important studies in the development of such disciplines as literature, mathematics, chemistry, philosophy, medicine, law and others. Emerging European universities borrowed heavily from Muslim scholarship. Translation of books into Latin..... Contributed to the growth of European science e.g. in algebra, art, Cosmography.

6. The rise of modern European cities.

In the European cities a new social class composed of merchants, bankers artisans and craftsmen emerged. It is this social class that was in the forefront for the fight for liberation in new cities. This social class demanded an education that would fit them and their children in the emerging professions. They demanded an education which would help them to understand the social problems created by rapid changes from an agrarian to an industrial society. Universities arose to meet the needs of these social classes

6. The 11th intellectual revival

This revival was initiated in many of the monastic schools which later spread to the cathedral schools. It was a product of the (scholastic fever or the) new enthusiasm for logic and philosophy. During this revival, ancient learning rapidly became available to the western schools especially through Spain, the center of translations of ancient texts into Latin. Due to the revival, enrolment in certain cathedral schools grew so large that the existing patterns of organization were not adequate. The schools organized themselves into associations of masters and students on universities that emulated the pattern of craft or trade.

7. Kings and Universities

The founding of universities was encouraged by definite privileges in the form of charters, (these were written documents from the Pope or kings giving the universities full recognition as distinct bodies). The first charter was given by Emperor Fredrick I to Bologna in 1158. Some privileges an exemptions included: the right to internal jurisdiction, based on their in-built sense of maturity, the right to confer a degree or license to teach, exemption from taxation and contributions.

KELVIN EKALIYO

RENAISSANCE AND EDUCATION

Renaissance is the revival of interest in Roman and Greek classics. It was a movement geared towards revival of learning of ancient Greeks and Romans. This was mainly based on ancient Greek and Roman learning,

This was a complex movement covering the period between 1320 and 1600 A.D.(after the 14th century) it did not begin abruptly but drew upon medieval ideas that had emphasized classical living. Up to 1450 AD, renaissance was entirely an Italian movement but later it spread to all countries of Europe. As it spread the movement acquired another name, humanism (from an old Roman word- humanitas) which means culture and a sense of human potential (a system of beliefs concerned with the needs of the people not religious ideas).

It is also captured as the rebirth of classical learning involving a shift in perspective as interest revived in the humanistic and secular implications of the Greek and Latin classics rather than in providential and religious aspects.

The renaissance scholars advocated for free thinking though adhered to the church teachings. Renaissance was to a large extent an age of optimism, the feeling of being and the belief in human potential. They (renaissance scholars) used classical writings especially that of Aristotle as a basis of scholastic philosophy. They turned to the rhetorical works of Cicero and Quintilian. Generally there was a shift in perspective from a providential (happening just when you need it) to humanistic world. The medieval man had a providential conception of history that directed his life and aspirations towards God. He regarded all creation as being controlled by the Divine force which was beyond human interference. Based upon this spiritual orientation, the medieval authorities were the sacred scriptures, divine revelation and facts. All aspects of life were theoretically related to God or to the church and his interpretation emphasized God's direct interventions in lives of one. The Renaissance main perception of history was centered on the temporal world rather than the world after deaths. While concerned with religious themes, he was involved with secular issues and problems and regarded Latin as the language scholarship, culture and education. Renaissance is best described as transitional period between the medieval

and the modern. It ushered in the essentials preliminaries of development that took place later. It broke down the rigid scholastic system and revived the classical studies encouraging more independent thought. Renaissance was accompanied by an increasing interest in the worldly activities of the past. Renaissance marked a period where there was the increasing authority of science.

CHARACTERISTICS OF RENAISSANCE

It changed both the purpose and method of education, during the Greek and roman times education had been to prepare people to be good and useful citizens of the state, but when the church took over education, it changed all this, under this education was to prepare people for the world to come, the focus of education was on religious devotion whose ultimate goal was to prepare one for happiness in the next world.

Renaissance aimed to protest against the church and to restore the world to the ideals of earlier education

Causes of renaissance

1. Revival of city life and commerce

City dwellers engaged in commerce, formed a new class, the middle class, bourgeoisie. It was this class that broke the medieval system. Possessing financial power, the commercial class often allied with the national monarchs to weaken the rule of feudal lords. The bourgeoisie demanded literacy, book keeping, and commercial skills necessary to sustain commercial and business enterprises. The scholastic educational patterns and content during the medieval period were inadequate to satisfy the needs of this class. They actively promoted the extension and contributed to the availability of formal education.

2. Growth of national states

This had important bearing on education since the new systems required efficient bureaucracies to administer justice, collect taxes and enforce national policies. The created civil servants needed educated individuals.

3. Age of exploration and discoveries

The work of explorers and scientific discoveries quickened the spirit of inquiry and investigation. Expanding commerce sought new trade routes. Through exploration there was diffusion of new ideas and cultures. The commercial class in Europe was very adventurous, it organised expeditions of exploration to foreign lands in search of trade, while there they came in contact with different civilisations and cultures that were more advanced than those of the Europeans. They brought back home many borrowed ideas.

4. The new spirit of nationalism

This spirit stimulated the European mind which came to believe in its own natural powers, as opposed to the static church mentality. Many hitherto settled questions were raised again by the universities, the supreme agent of belief in man's natural powers. The growth of new states required bureaucrats to work for the government, since they had found scholastic education to be inadequate in supplying the required manpower, hence embracing humanistic education.

5. The invention of printing

Towards the end of the 13th C the process of making paper was introduced into Europe from the East. The Discovery of this art of printing spread the new learning all over Europe. It meant that manuscript were replaced by books and great numbers could be printed, so that information and learning spread to more people.

6. The spirit of discussion/ Scholasticism

Scholasticism led to the speculation spirit which culminated in a struggle between naturalism and Hellenic in nature, then to the progressive and supernaturalism seen in the authoritarian stable and suspicious Catholic Church.

3

HISTORY OF EDUCATION NOTES

TOPIC 4:

EDUCATION IN THE 17TH AND 18TH CENTURIES

Introduction

The objectives of this topic are:

- a) Identify factors behind the rise of science in the 17th century in Europe
- b) Discuss the contribution of the current education by John Amos Comenius and Jean Jacques Rousseau
- c) Show ways in which Naturalist Education thought has contributed to the theory and practise of modern education

In this topic we want to look at how scientific revolution led to the development of education. Modern sciences' evolution dates back to the 17th century Europe, this scientific revolution was essentially a transition from natural Philosophy to science, the hallmark of this new science was the acquisition of a precise/exact quantitative understanding of a limited aspect of nature. Precision/exactness/accuracy meant the measurement of shape, size, and quantity in order to formulate mathematical descriptions of natural phenomena.

The central features of this science was the emphasis on unprejudiced observation (unbiased, unfair or unreasonable opinion), the deliberate designing of experiments designed to focus on a limited aspect of nature and seek answers to particular questions.

Factors that led to the rise of science in Europe

Early Islamic science was the main contributor to the rise of science in Europe. The early Islamic society scientific research and education developed through four types of institutions which were not found in previously in the greek and roman civilization, these were the Hospital, the public library, the madrassa and Astronomical(excessive/enormous/extremely) Observatory(a special building in which scientist observe/watch the moon, stars or weather). Historians of Islamic science have described this process as a major scholarly excellence. The process led to advances in geometry, algebra, alchemy (chemistry), astronomy and alloy compositions. This same classical learning was later on availed to mediaeval Europe and retranslated into latin, which has in turn become the foundation of modern Europes science and technology, today arabic words such as algebra, alkali, alcohol, zenith(the highest point reached by the moon/sun in the sky) shows the role played by islam in scientific revolution

The main contributors of the scientific revolution were Nicolas Copernicus, Johannes Kepler, Galilei Galileo who helped to establish the layout of the universe, Francis Bacon who showed that the new science was an empirically based endeavor, Rene Descartes who gave science a new metaphysical (a branch of philosophy that deals with trying to understand the nature of reality) basis, Robert Boyle who encouraged the view of the natural world as a mechanism, John Amos Comenius who articulated the Renaissance and Reformation educational ideas and practices and Isaac Newton, who provided the framework in which to some extent these different contributions could be unified.

As a result of the revolution the modern world begins at the 17th century. The century was remarkable in astronomy (scientific study of stars), education philosophy, mathematics and the invention of scientific instruments.

The revolution witnessed new inventions such as the microscope, the magnet, the telescope, the thermometer, the barometer, the air pump, Galileo improved the use of clocks by establishing the layout of the universe. Studies on the circulation of blood, spermatozoa, protozoa, unicellular mechanisms and even bacteria were among other important discoveries.

Boyle discovered the Boyles' law that in a given quantity of gas at a given temperature, pressure is inversely proportional to volume.

Advances in pure mathematics included invention of logarithms, differential and integral calculus, owing to these and other inventions, scientific observations and calculations became more accurate and extensive than other times. The 17th c was characterized by new intellectual approach, or method by which reality could be known. The new approach came to be known as realism/realist approach since it sought to solve human and natural problems scientifically, through observation, experimentation and demonstration.

Realism and education

During this time there was a great body of ideas and knowledge generated through the new science. Scholars in the 17th century Europe attempted to develop some universal system of knowledge (pansophia), their aim was to ensure that learners were given full information on every subject they learned, so that they could see the relationship between any subject and others. This led to the compilation of encyclopedias (a book/set of books containing facts about many different subjects or about one particular subject) whose authors attempted to channel new ideas into knowledge. The pansophists were influenced by early philosophical liberalism (open/broadmindedness) which sought to end political and theological strife and laid great emphasis on the importance of education.

30/12

It was within the background of pansophism and liberalism (open/broadmindedness, willing to understand and respect other peoples' ideas, opinions or feelings) that realistic tendencies in education were to develop. Realism was one manifestation of the dissatisfaction in Christian beliefs and scholasticism that had driven schools towards further isolation from life and ignoring personal aspirations and societies' legitimate needs. Realism implied the search for a method by which the reality could be known and it attempted to construct an educational approach that could meet the human needs through the introduction of vernacular instruction, more efficient teaching methodologies, better schools and broader curricular

Three forms of realism was developed

(a) Humanistic realism

It sought to understand the content of education. It maintained that language as a medium of communication was indispensable (crucial/necessary) in passing scientific knowledge and therefore language and literature were to be central to the education process in the effective communication of scientific progress

(b) Social realism

It advocated for social reform in the societies' institutions, it advocated for language and literary skills and society and its institutions rather than the school and its curricula were to be the centre of learning.

(c) Sense Realism

It has been described as early scientific movement in education since its development coincided with the scientific revolution in the 17th century. This realism attempted to adjust education to real life. It advocated that education primarily came through the senses, the training of sense perception rather than memory, as a result emphasis in education shifted from literacy and grammatical materials to natural sciences, real life situations, and the use of vernacular languages at the formative years of schooling.

One of the early and leading proponents of realism in education, was John Amos Comenius

JOHN AMOS COMENIUS (1592-1670)

Was born in the Kingdom of Bohemia, he belongs to a group of realists known as the sense realists who believed that we acquire knowledge through sense experiences, he was the movements' most ardent proponent.

33

He is justifiably regarded as the father of modern education. To him the highest goal of education was eternal happiness with GOD, which was only possible through the right earthly living, he believed that education could regenerate (renew, restore) human life and insisted that the standard of humanity could be raised through proper education for the young. He believed that this could be achieved through a teaching system that embraced all knowledge, the teaching of all things to all men. His ideas were more than any that preceded him. His contributions to modern education can be categorized into three areas

- a) Curriculum
- b) Organization
- c) Methodology

Curriculum

Comenius advocated for a wide curriculum that was all inclusive, every subject was to be taught in school in details, he included all subjects like grammar, rhetoric, dialectic (a method of examining and discussing ideas in order to find the truth), geometry, arithmetic, astronomy, music, physics, geography, history, morals and religion. He specifically emphasized the value of History as the most important element in human education.

He considered textbooks as important agents of education, but since textbooks were scarce and expensive he advocated that teachers should dictate so that all students can learn.

He also was involved in the writing of textbooks in Latin, to solve the problem of the scarcity of textbooks

He insisted that industrial arts and physical training must be included in the curriculum

He emphasized the use of vernacular in school especially at the early ages but then advocated for the study of foreign languages to facilitate communication with neighbours

To him languages were not to be learned merely for the sake of learning them but as a means of discussing scientific and practical subjects

Organization

He advocated for the complete development of the pupils under a systematic and graduate plan of school organization and with each school level blending with and leading to the next

He arranged a course of instruction extending from infancy to early childhood, a four grade school system and maintained that education was to be for both sexes and all classes of people

The course at each stage was to last six years starting from birth and each stage was to be a preparation of the next

He suggest the following levels of school organization

- i) The school of infancy/the school of mother's knee which would cater for children aged 1-6 years, this has in time been developed into today's day care centres, nursery schools and Kindergatens
- ii) The vernacular school, to be located in every hamlet(village, rural community or small town) to cater for children aged 7-12 years
- iii) The latin school to be located in every city, it was for the education of those children aged 13-18 years
- iv) University. For children aged 19-24 for those who had the will and the ability to profit from its advanced instruction. The college of light, which was within the university setting, he envisaged a national research center for those who had le university and wanted to pursue further learning, those in the college would tra widely to have direct contact with human nature and institutions

Comenius also made suggestions on the administrative organization of schools. He empha that all schools should begin on the same date every year and that the children should n admitted after opening day

He advocated for a school timetable that should be systematically organized with a clear schedule of class work laid for each year, month, week, day, and hour

He advocated that each class should have a separate room, teacher and textbooks

He further said that school days should be organized according to stage of development of the child, older children were to study six hours a day and younger ones four hours a day, with half an hour for both devoted to relaxation in the mid morning

a four grade school system and maintained that education was to be for both sexes and all classes of people

After class hours were to be allocated to physical subjects and there was to be no homework

TEACHING METHODS

Comenius stressed the importance of a teacher as an agent of education, he devoted most of his time in developing teaching methodologies

35

He wrote a book titled *The great didactic*, which spelt out the what the theory and practice of education should be. In the book he advocated the use of models and pictures based on the objects themselves

He believed that knowledge and morality should be the aims of education

He recognized that the children's faculties/potentials should be drawn out in their natural order/perception, memory, reason and imagination

He recognized the value of physical exercises and manual training, insisting also that the schools should be healthy institutions having plenty of free space

According to him education would be effective if only (i) it began early, before the mind was corrupted, (ii) the mind was prepared to receive it (iii) it began from simple to complicated (iv) it did not have too many subjects to overburden the pupils (v) its progress was measured in each stage (vi) everything was taught through the medium of the senses (sight, touch, taste, smell) and (vii) the use of everything taught was kept at a constant view

Comenius applied this in his classroom procedures and he believed that these methods would transform the school from being a place of terror, a place of wasting time, and one that fostered a hatred of books to one that was enjoyable and would cultivate a desire for a lifelong learning

His ideas provided the impetus for educational developments in the 18th century.

MODERN MOVEMENTS IN EDUCATION, THE 18TH CENTURY

18TH CENTURY NATURALISM IN EDUCATION

During the 18th c there was a widespread sense of liberating (energizing) knowledge in Western Europe, as a result writers came to call it the age of enlightenment or reason. As a result of the previous scientific knowledge, light and reason had dawned making what had been obscure more clear. The age of enlightenment also acted as the basis of the spirit of liberalism that was to dominate education thinking in the 19th century. The 18th century experienced a revolt against absolutism (aristocracy/totalitarianism) and ecclesiasticism (connection with the Christian church). This revolt fell into two eras, during the first half it was directed against repression (oppression) in religion a thought leading to nationalism and skepticism (an attitude of doubt or disbelief) of Voltaire (1694-1778), the second half when it was directed towards repression in politics and towards an assertion of the rights of man culminating in naturalism (trying to show the world and people exactly as they are) of Jean Jacques Rousseau (1712-1778)

In the 18th c education was progressively extended to all classes in the society and passed from control of the clergy (priests) to the laity (all members of a religious group apart from priests). Latin as a medium of instruction was replaced by vernaculars, the study of nature and

culture was being emphasized and human beings were taught how to live in the future rather than in the past. Elementary, secondary and higher education, were still facing challenges related to social economic and gender equity, poor training of teachers, ungraded curricular, poor teaching that emphasized memorization, and lack of quality and relevant education, despite the great movements of the past centuries such as renaissance, reformation , counter reformation and scientific revolution. The naturalists recognised the above weakness and endeavoured to initiate reforms to improve education. They demanded better schools with fully trained teachers and spelt out the importance of education to the transformation of the society.

JEAN JACQUES ROUSSEAU (1712-1778)

Was a Frenchman born in Geneva at a time when aristocracy dominated French society. The population especially the peasantry was generally miserable, being a philosopher he called for a change from social stratification to an all inclusive society. The key features of naturalism that he advocated were

- ❖ Simplicity according to the laws of nature,
- ❖ Rights of the individual and rejection of dogmatic authority of the state and the church
- ❖ Naturalists desired a state ruled simply by natural feelings and not pretensions,
- ❖ The naturalists looked at nature as the origin and basic source of all existence, they have described as worshippers of nature
- ❖ In terms of education, return to nature meant the discovery, formulation and application of natural laws to educational process.
- ❖ Consequently the teaching content, methods and organization of education had to be based on natural laws.

WHAT ROUSSEAU ADVOCATED

- ❖ In his book EMILE, He argued that education is the preservation of the natural goodness and virtue of the individual and the formation of a society based upon the recognition of natural individual rights
- ❖ Acc to him the end of education was the attainment of social order in which all its members could recognize the principles or virtues of simplicity, liberty and equality.
- ❖ He said that the aim of education is to free the child to develop his/her natural endowments, to cultivate his/her individual nature and capacities

37

- ❖ To him the child at birth was good, through education the child's natural instincts and feelings would be given full, free and spontaneous expression
 - ❖ Ultimately education was to prepare the individual to effectively enter into all human relationships of a society fully adjusted to his/her natural traits and capacities in order to live a life of a natural human being to the fullest degree
 - ❖ Acc to him the education system was to be directed to the upper classes, the poor man did not need education since he was close to nature and was saved from the false and artificial training to which the children of the upper classes were submitted.
 - ❖ He argued that the peasantry life had developed in the poor all the natural virtues of equality and spontaneity that the upper classes lacked
 - ❖ He advocated for an all round education designed to adapt an individual adaptable to the changing fortunes of life and dynamic society
 - ❖ He advocated for vocational education to train people to develop the right attitudes towards others and form the right relationships with them
 - ❖ He emphasized health and physical education because they made children healthy and he emphasized that children should be allowed to run, jump, climb, and swim at will and naturally in open fields, running, jumping and swimming were good since they facilitated psychomotor and sensory development
 - ❖ He emphasized that agriculture and carpentry were good because the use of a spade, hoe, jembe, rake and hammer helped in the development of a child's sense perception and practical judgment
 - ❖ He emphasized that children learning should be natural unfolding, he opposed the 3rs since they contained artificial symbols
 - ❖ He also hated books and said that books merely taught us to talk of what we do not know and they come between the child and the things of nature
 - ❖ His conception of education for women were retrogressive, his model woman, Sophie had no individuality, her duty was to please man and her whole life was supplementary to that of man, she was to learn music, dancing embroidery, designing and morality in order to provide a good home
 - ❖ He did not advocate for a universal educational methodology and he asserted that each individual is unique and go through a process of change differently as they grew, therefore every teacher must consider each child's stage of development
- 28

In summary scientific revolution provided the background for the development of the realist and naturalistic thought that dominated the theory and practice of education in the 17th and 18th centuries and beyond.

TOPIC 5

EDUCATIONAL MOVEMENTS IN THE 19TH AND 20TH CENTURIES

EDUCATIONAL IDEAS OF THE 19TH AND 20TH CENTURIES

In this topic we are going to look at the political and economic ideas of the 19th and 20th centuries, in a sense the ideas of the 19th and 20th centuries were a continuation of the currents of thought that had started in the 17th and 18th centuries. The 19th and 20th century intellectual thinking encompassed a much wider area than the 18th and 17th centuries, this is because, Russia and America had been brought into the fold of intellectual life due to the rise of science and technology.

Science in particular led to new ideas in geology, biology and organic chemistry which stimulated new thinking 2ndly the 19th c in particular saw the coming of age of the industrial revolution in Europe and in the rest of the world. Introduction of machines altered the social structure and gave men a new vision of their power in relation to the physical environment. The various problems too which were associated with industrial revolution provided intellectuals with a diversity of social phenomena that they theorized about.

LIBERALISM

Liberalism was the main movement during this time although there were other movements e.g. conservatism and marxism

This was one of the strongest intellectual thinking of the, 19th century. The genesis of liberalism had started a century earlier during the enlightenment period, by philosophers such as Socrates and Voltaire. The enlightenment tradition espoused the fact that human civilization through reason as opposed to the religious inclination of the earlier centuries. The liberals were therefore committed to the liberation of individuals so that they could realize their capacities. The liberals argued that every individual has a degree of freedom that no other man can interfere with and that the only reason why a state or another man can interfere with is to enhance the enjoyment of his freedom. Liberalists were closely tied with a democratic spirit, the democratic spirit which emphasized on the principles of liberty and the equality for all men, following on these principles a new interest in the common man was ignited. The liberals argued that the common man was representative of the great masses of human beings and had possibilities that had not been allowed to develop because of institutional and political conditions. Liberalism therefore sought to promote self fulfilment in every kind of individual by emphasizing on the principles of the rights of man.

Acc to the liberalists the role of education was to foster in men the capacity to think and liberate oneself from natural limitations. Among the earliest advocates of liberalization was John Stuart Mill, his essays 'on liberty' in the 20th century Herbert Read, 'the redemption of the robot' emphasized on mans creative activities as a basis for liberation from a machine

The liberal tradition and its influence on schooling covered the two centuries 19th and 20th century. In order to understand better we shall discuss two liberals

JOHN HEINRICH PESTALOZZI (1746-1827)

Was born in Switzerland, his ideas was mostly in the area of method in teaching and nurturing the intellect of young children

In one of his writings Leonard and Gertrude, he argued that children needed to be given better education as a means of improving their future conditions and that of their communities

He placed the family especially the mother as central to the education of children

Self activity the best method of instruction

Advocated for a system of education based on the child's present and future interest provided on the mental and physical state of the child

In the book *How Gertrude teaches her children*, he praised the principle of self activity, as the best method of instruction, this was the genesis of child centered method of instruction

HE advocated for a system of education based on the child's present and future interests

72

His immense concern for the education of the poor led him to propose industrial education for them. He argued that every man should be educated to be religious, knowledgeable, kind and useful on the home community

Learner centered method of instruction

Intellectual power an aspect inherent in every individual but one that needs to be developed

His concern for the education of the poor made him to introduce industrial education for them

He advocated for different forms of education since the circumstances of men required different forms of education, for the children of the rich he argued that they have to be stimulated to greater effort by greater knowledge while the children from the poor must be guided to greater knowledge through work, in his view children of the middle class were readily educable

Every man should be educated to be religious and useful in the home

JOHN DEWEY (1859-1952)

He was American, he was interested in Education and Philosophy, and in 1894 he was a professor of philosophy at Chicago. He established a laboratory in Chicago, he also wrote a book *the child and the curriculum*, these books were the foundation of his educational philosophy, which was later condensed in his book *Democracy and Education*,

Education was linked to the school and the society

The school in Chicago was organized to offer pupils a connection between everyday life and experience, he argued for a more close relationship between society and school

In 1904 he moved to Columbia University, here he wrote many books including *Human nature and conduct* (1922), *The public and its problems* (1927), *logic: the theory of inquiry* (1938), From these works Dewey embraces the vision of a progressive, democratic society

He advocated that an educative experience is one which one makes a mental connection between what one does and what happens as a consequence of doing it.

He argued that education should make the connection between the society and the school real, he argued that schools should be organized into small communities to reflect the wider society, he said that people learned the ways of their society by being immersed in a set of social experiences that mirrored the society.

He advocated for learning by doing approach instead of rote learning.

He advocated for democracy in the teaching and learning process.

(II) CONSERVATISM

Was another current of educational thought in the 19th and 20th century. It was a reaction towards liberalism and naturalism. The conservatives were in particular opposed to the idea of a total or radical changes in the society, one of its main proponents, Edmond Burke (1729-1797), attacked the concept of radical or evolutionary change as a means of social reconstruction, he argued that genuine change could only result from gradual historical processes

Promote retaining the traditional social institutions,

They tend to preserve things as they are for stability and continuity

Were opposing the French revolution which was happening in the 18th century

Conservatives held that the role of education should be to be to maintain the status quo, through the preservation of language and tradition.

The conservatism called for a return to the traditional authoritarian classroom and the 3rs curriculum as a basis of good education, some conservatives have called for the abolition of schools in the society, they argued that schools especially in the third world are not the same, and that schooling does not educate but imprisons and damages pupils

(III) MARXISM

Marxism was advocated by Karl Marx, he was born in 1818 at Treves, (Rhineland) Germany. As a philosopher Karl Marx argued that a phenomenon (occurrence, happening) does not exist in isolation but are dependent upon other phenomenal, so in order to appreciate these relationships we need to study various phenomena. He further says that that a phenomenon must be studied in terms of movements and development because the society is not static but is in a continual state of change.

Whenever opposites are found, their positive interconnections have to be looked for, (like teachers should strive to see the strengths of students and not their weaknesses)

- He also advocated for historical materialism (by this he wanted to theorize the principles that govern all human relations)
- Acc to him human relations are governed by the common ends that they pursue, human relations he said entailed the production of the means to support life and the exchange of things produced

He asserted that the production process entails two aspects:

- (i) The labour and the practical skills that man uses (the productive forces) and

42

(ii) The relationships between men and the production process (the productive relations)

He says that when the productive forces change, relations of production also change. He further argues that the histories of all societies are histories of class struggle to control the forces of production

In His doctrine (principles, set of guidelines) (Marx's economic doctrine), he asserts that labour alone increases value, and that profits represent unpaid labour time

He came up with a theory known as Marx's theory of state and Revolution. This theory underlined Marx's discussion of class struggle. In this theory he saw the state not as a legal entity existing to promote the welfare of citizens but as 'the executive committee of bourgeoisie'. He also saw the state as a product of class struggle which would wither away when a classless society has been established

MARXISM AND EDUCATION

Marx sees education and schools as a force of production whose control different classes struggle for. Control of education as a means of production enables the ruling elite to control relations that govern the production process both in politics and economics. He therefore says that schooling is related and influenced by the ideologies of the dominant classes. He says that the level of education provision, the social relations established in schools, the organizations of knowledge and its transmission are political processes. Marx also sees education institutions as sites of struggle and resistance, where people can be taught to rise against oppression

(IV) RADICALISM

Does not represent one stream of thinking, esp Marxism, were the members of the working class or middle class, opposed to aristocracy rules advocated by the church.

Political

This is a practice of questioning received institutions and assumptions. It is more related to Marxism, it started in England in the 19th century and is closely associated to the rise and expansion of the middle class.

Before radicalism started England was characterized by an Aristocratic govt and the church ran economic and political institutions. This system limited political participation and so one of the radicals wanted it reformed.

Two factors precipitated the rise of radicalism. One was the growth of new professions outside the traditional laws, medicine and the church. This was an important aspect of middle class development, secondly was the emergence of a new breed civil servants such as John Stuart Mill

43

and his son James Mill, promulgated the utilitarian (down to earth, practical) philosophy, which acted as an ideology of the professional class

The radicals opposed the aristocratic ideas and all they implied in terms of social, political and religious domination. They fought for the inclusion of all people in political participation. They argued that all people are reasonable beings and that values should be determined by everyone in collective and rational discussion. In they won the inclusion of the middle class population in the parliament and contributed to the rise of modern democratic states.

In education radicals took it as their mission to make the society more democratic through education. They criticized the notion that the primary purpose of education is economic efficiency and instead for citizenship training and human empowerment through critical thinking.

(V) GLOBALIZATION

Globalization as movement started after the 2nd WW, but picked during the last decades of the 20th century and continues unabated in the 21st century.

Globalization refers to a stage in the world economic development where the whole world is seen as a total unity, guided by the same culture and values, this view is different from the 18th and 19th c where there was a clear distinction between the capitalists and workers (labourers) developed and underdeveloped countries, middle and periphery, among the many dichotomies that marked the world, the dichotomies were the definition of countries on the basis of their stages of development and their roles in world capitalist development

As opposed to the above, Globalization asserts that the world has entered an age where there is free movement of labour, capital and the poor can be found even in the most industrialized societies.

In a sense globalization refers to the internalization of capital, and with this has come internalization of cultural values, labour standards and systems of governance.

The globalization era has been marked by, new ways to enhance capital formation processes and the rapid growth of high consumption

Globalization and education

In education the effects (implication) of globalization are multifaceted

- (i) Education hanging. This is a case whereby formal institutions are seen to be increasingly inadequate to inculcate global values. The effect has been the increasing privatization of education provision whereby many parents have the leeway

44

(flexibility) to decide on the nature of the curriculum to ensure their children acquire global values

- (ii) Secondly is that education has been viewed as commodities to be sold in the market, hence the pressure for schools and educational institutions to provide education relevant to the market needs
- (iii) Trends towards massification (expansion) of all forms of education also signify a response to globalization needs
- (iv) In terms of human capital development, globalization has fostered the need for specially trained personnel, hence educational institutions have been forced to produce individuals with multiple but flexible specializations.
- (v) The diversity of projected economic needs which has created various educational demands hence teaching institutions have had to respond to this plurality of economic requests by admitting students of different social origins, interests and life prospects.
- (vi) In a sense the struggle over control of education institutions has moved from the level of classes, to that of multinational firms, a case at hand is the struggle by computer firms to write electronic programmes for schools.

In a nutshell the 19th currents of thought such as liberalism, conservatism and Marxism emerged to theorize on the best forms of social organization and educational practices that could guarantee human emancipation, individual rights and social progress

In the 20th and 21st century's radicalism and globalization marked theorization on forms of social organization, human progress and the role of education.

Class Activities

- a) Compare and contrast the effects of Scientific Revolution
- b) Discuss the Realists Education ideas
- c) 'Jean Jacques Roseau's ideas are unsuitable for the practise of education today' Discuss
- d) Discuss some schools of thought in the 19th and 20th centuries
- e) Analyses the influence of the various schools of thought on educational theory and practise

TOPIC 6

TRADITIONAL SYSTEMS OF EDUCATION IN AFRICA AFRICAN INDIGENOUS EDUCATION

OBJECTIVES

- Describe the content and methods of instruction
- Describe the goal and aims of indigenous African Education
- Explain the relevance of these traditional forms of Education to modern Educational practices

THEORY AND PRACTICE OF AFRICAN INDIGENOUS EDUCATION: GOALS, AIMS AND CONTENT

Definition:

- A coherent system of education developed by African Indigenous societies that transmitted culture traditions, customs and civilizations from generation to succeeding generations
- A process by which people were prepared to live effectively in their environment
- Pre- colonial black and formal Africa had no literacy schooling, however Africans had developed an elaborate system of education prior to the establishment of European imperialism in the last Quarter of the 19th Century.
- This system of Education has been described as indigenous education to distinguish it from Islamic and Western education.

African Indigenous Education as practiced by each ethnic community had its own distinctive features reflecting their particular life and culture of its people.

The major similarities were that it was strongly adapted to the physical and social environment.

GOALS

46

- ❖ Indigenous education systems varied from one society to the other but the goals of these systems were similar
- ❖ In every community this education was essentially education for living, its main purpose being to train the youth for adulthood within society
- ❖ African Indigenous Education had normative and Expressive goals.
- ❖ Normative goals were concerned with instilling the accepted standards and belief governing correct behaviour.
- ❖ Expressive goals aimed at creating unity and consensus (harmony). Specifically the expressive goals were to
 - Conserve the cultural heritage of the family, clan and ethnic group

AIMS

- Adapt children to their physical environment and teach them how to utilize it
- It also laid strong emphasis on the learning of practical skills and the acquisition of knowledge
- AIE embraced character building as well as the development of physical aptitudes and acquisition of moral values
- AIE emphasized social responsibility, job orientation. Political participation and spiritual and moral values

CONTENT OF AFRICAN INDIGENOUS EDUCATION

- ✓ Indigenous education grew out of the immediate environment, whether real or imaginary. i.e.
 - Physical environment
 - Economic environment
 - Social environment (customs and traditions)
 - Religious environment (systems of worship: morals, laws, conduct)
- ✓ From the physical environment children would learn about the weather, landscape, animal and insect life. It was usually a harsh environment which children had to cope, they had to make adjustment to the environment using axes and other tools which the experience of the past had helped to evolve. They were taught how to hunt fish, prepare food, build a house and run a home. They had to learn the important aspects of the environment.
- ✓ Individuals were supposed
- ✓ to live and serve others in accordance to the accepted manners, customs laws avoidance of taboos, and rigorous code of morality. Children were taught the rights and obligations
- ✓ AIE also inculcated a very religious attitude to life. Religion was concerned mainly with morality, but gave support to the laws and customs of the community. This included
- ✓ courtesy, honesty generosity.

47
2

- ✓ Individuals had to learn when to use or avoid ancestral spirits and mysterious powers for the sake of their survival and learn also to appreciate the ties between the living members of the clan and the dead or ancestral spirits

Childhood Education

According to AIE children were valued highly. The general attitude was that of interest, well wishing and encouragement. The arrival of a new baby tended to strongly strengthen the continuity of the family bond. It was normally accompanied with many rituals and ceremonies such as name giving, a child was named according to the lineage or accession of birth, immediately or after a few days. A mother at this time was responsible for the child's education and was the closest to the child.

As the child grew up he/she became the responsibility of more members of the family. They were taught to be morally upright and to conform to the modes, customs and standards of behavior inherent to the clan. Bad habits and undesirable behavior such as disobedience, selfishness and theft were not tolerated. Usually verbal warnings were used and more often followed by punishments, and if bad behavior continued the offenders would be rebuked, smacked or assigned some piece of work to complete before being allowed to eat. Serious offences resulted in severe beating or other forms of inflicting pain.

Children were also protected from all dangers and all sorts of harm.

In childhood education games played a major role in awakening of intense mental and physical activities. Children were left to their own initiatives to make toys from local materials of their choices and interests.

As the child grew he/she engaged in more productive education. Learning through the medium of work enabled children to acquire the right type of gender roles. They learned by being useful in doing and working hand in hand with adults. They were expected to learn by seeing and imitating. He/she was given a gradual process of training according to age and sex. Firstly, the work that a child did usually increased in amount and complexity as he/she grows. Secondly, is the physical ability of the child was taken into consideration.

Individualistic tendencies were only allowed under the umbrella of the society, but in general communal sense was encouraged. Through relations with other family members the child learned to imitate the actions of others, to assimilate the moods, feelings and ideas of those around him/her and thus acquire community identity

Adolescence education

This was given to children of 15- 18 years. Educational activities based on physical exercise, sex education and awareness of responsibility were given during initiation. Circumcision was a rite of passage during which they were given moral and physical tests. It was a point of passage into

full membership of the community. Circumcisions were accompanied with formal lessons in form of songs and tests.

Methods used in African Indigenous Education

- ✚ AIE used both formal and informal methods
- ✚ Informal methods were involved in production works and it made them capable husbands and wives in society. They included observation and imitation, songs, rites of passage, role play, dances
- ✚ Formal methods involved theoretical and practical inculcation of skills. This included learning through apprenticeship. Parents sending their children to work with crafts men e.g. potters, blacksmiths who would teach them formally.
- ✚ Examinations involved practical performance of in activities in real life where children participated in doing what they were taught
- ✚ Riddles were also asked for the initiates to interpret their meanings.
- ✚ Elders also got involved in imparting knowledge. Such included rules of behavior, with which an adult was to comply. Initiates were warned against such things as incest, adultery, assault or theft, they also taught the rules of exogamy.
- ✚ The children also learnt through apprenticeship. Parents who wanted their children to learn some practical skills, such as physical endurance skills a sense of observation, good memory, and self discipline. Parents who wanted their children to acquire some occupational training normally sent them to craftsmen such as potters, basket makers or blacksmiths.

PHILOSOPHICAL FOUNDATIONS OF AFRICAN INDIGENOUS EDUCATION

These are principles underlining AIE

- ✚ Communalism: this was the principle of group cohesion. It was a way parents sought to bring up their children was to strengthen the unity of the clan.
- ✚ Preparationism: (training) Children were brought up to become useful members of the household, village, clan or tribe,
- ✚ Functionalism: Children were to learn by doing and were to be useful to the society
- ✚ Perennialism: Traditional education had strong elements focused on the transmission of a heritage from one generation to another
- ✚ Holisticism: This principle expected an individual to be able to do work on his own. Like a farmer to farm and build his granaries.

STATUS OF AFRICAN INDIGENOUS EDUCATION TODAY

DECLINE OF AIE

It is worth noting that within the African environment today it is difficult to observe indigenous education anywhere in its pure form. Modifications have affected it in varying degrees and at

different levels, depending on ethnic groups, families and individuals. However there is nowhere it has completely disappeared.

- Christianity has also adversely affected the permanence of AIE. The missionaries fought against traditional African education. Initiation practices for example with the girls were strictly forbidden. In some cases circumcisions ceremonies are not as tight as before, with hospitals that have come up and what a view
- School attendance has adversely affected AIE. It currently competing with modern schools which spread new ideas and skills. Attending school has become a main criterion for differentiating the traditionalists and the modernists.
- Indigenous education has been pointed that it had some inherent weaknesses and deficiencies which partly contributed to its decline. This was particularly because it could not remain relevant to the modern social needs, given the changes that were brought about by westernization on traditional societies. For example attention was focused on the group and led to neglect of individual needs. Secondly its focus on traditions became a hindrance to development. It did not allow contact with outside societies, it served a static society.
- Urbanization has too posed a major challenge to AIE. In towns one witnesses the decline of the role of the family unit in sustaining cultural values. For example in urban area you hardly find a family that use mother tongue is maintained. Such features as evening conversations around the fire and beliefs in witchcraft and evil influences do not gain ground.
- No figures and letters were learnt. The development of external trade and government called for a system of written records. Unwritten records are easily forgotten or lost hence distortion of information
- The methods of Indigenous education were both formal and informal, but were generally inadequate. Formal instruction was meant to indicate action to be initiated or belief to be accepted but was not given in an attempt to discover and to impart why things should be done.

IMPORTANCE OF AIE TO MODERN EDUCATION

- Despite its weaknesses, there are ways in which indigenous and western forms of Education complement each other. The modern education does not deal with the realities of the children time and environment. Traditional education reminds us about realism in education. It was deeply rooted in the environment bringing children into the world of nature and people. It involved children in real life situations.
- Indigenous education was guided by the principle of learning by doing. Children received functional learning which largely prepared them to live and work on the land as well as in specialized occupations. Western education on the other part prepares children to despise land and manual work and to seek white collar professions and live in towns. Learning

50

geared towards the situation of the pupils helps them visualize and anticipate the real occupations and life they are likely to lead in the future.

- Aspects of traditional education such as folktales, play activities, and games should not be left out. Indigenous education tended to reflect the values, wisdom and expectations of the community as a whole. Western education on the other hand tends to stress intellectual development of the individual, while paying attention to the needs, goals and expectation of the wider society. Formal education is has an important role to play in African societies but if such a system is to meet the cultural, social, moral, intellectual, political and economic needs, it ought to be indigenized

TOPIC 7

COLONISATION AND EDUCATION IN AFRICA, 1900-1920

Objectives of the topic

- Describe the Early European settlements and attempts at educational activities
- Compare and contrast the British and French Colonial systems in Africa
- Discuss the establishment of Western Education in Africa

Early European settlements in Africa

Portugal was among the first nations to venture into black Africa in around 1498. Their coming lay in the great expansion of the mercantile activity which transformed Europe in the late medieval period. They established an empire along the West Africa coast from the start of the 15th century and by the turn of that century they had set up another empire along the East coast of Africa. The Portuguese rule the coast for about 200 years. They used the divide and rule policy to rule by setting one town against another, e.g malindi against Mombasa

Reasons for the coming of the Portuguese

- ✚ To trade for ivory, gold and spices which were controlled by the Arabs
- ✚ They wanted a guide to find the sea route to India because the Ottoman Turks had occupied the middle East hence blocking the trade routes from Europe to India
- ✚ To explore and adventure
- ✚ To counter the growing Islamic influence, earlier on muslims had defeated them forcing them to convert into Islam, they intended to revenge by forcing Muslims in the coast to become Christians
- ✚ To colonize the East African coast in order to protect their trading interests

512

Reasons for the decline of Portuguese rule

- ✚ From 1530 the fortunes of Portugal began to decline, and being a small country, the human and economic resources of their country was proved unequal to the burden of imperial ventures extending to china and the East Indies.
- ✚ The few officials they had on the East African coast were corrupt and ruthless in carrying out their duties giving rise to hostility from the coastal people
- ✚ European nations began to build settlements and trading posts along the coastal areas to conduct their businesses. These European traders included the Dutch, Danes, French and the British. They built forts from which they could conduct their businesses.
- ✚ The attack and seizure of Fort Jesus by the Omani Arabs because of the brutality of the Portuguese was a final blow to the Portuguese rule

The earliest contacts with western education in both West and East Africa were through these coastal forts created by the European trading nations. Some of these forts from time to time contained a school, but a few of these schools achieved permanence as they were dependent on personal interests of the officials and merchants concerned.

Most of the Europeans provided the education merely to woo Africans to Christianity and secondly to produce Africans who could read and write in order to fill vacancies in their service. Thirdly, some traders especially along the West African coast wanted their children and more usually selected slaves to acquire the skills of speaking, and writing European languages and keeping accounts. By the 19th century Portuguese and English were spoken in places such as Lagos and Benin.

Most of the schools during this time were castle schools that mostly aimed at teaching mullatto children, who were considered to have more rights than the natives under European Jurisdiction. Another practice during this time was that of sending boys to Europe, since it was assumed that when they came back they would be well instructed in Christian religion and in addition value friendship with the Europeans.

In terms of content, these early schools consisted of reading, writing, occasionally arithmetic and religious education. The curricular of these schools was the same as that of the European schools catering for education of the poor classes during this particular period in Europe.

CHRISTIAN MISSIONARY EXPANSION AND ABOLITION OF SLAVE TRADE

Initially European domination over Africa were weak, however with the abolition of slave trade and new economic relationship brought about by Europeans demands for different kinds of products instead of slaves created a situation where European political and cultural influence grew in 1900.

In West Africa through the Anti slave trade movement, a free slave settlement was started in Sierra Leone in 1772, and it became the first British colony in 1808. Until the 1880's it was the centre of all British activity. It was a center culturally for diffusion of language, trade and

52

52

civilization throughout the world. The French too established a centre during this time in Senegal.

Christian missionary activity arose during this period as a result of the conditions surrounding the slave trade. The sheer brutality of this commerce stirred the conscience of some individuals. These campaigns against slave trade brought a sense of guilt to the Christians and this led to the desire to abolish slave trade. The religious impetus behind this new missionary movement was also motivated by the evangelical revival of the late 18th century started by John Wesley.. This revival created a new Methodist church an increasingly powerful evangelical party within the established Anglican Church. It affected all the protestant churches in Europe and Northern America which led to the formation of various Christian societies. A similar trend was also witnessed in the Catholic Church. Many missionaries got established in Africa and they spread to most parts of the continent. In Tanganyika for example in 1864, the Holy Ghost missionaries established a freed slave's site in Bagamoyo. These 172 slaves were purchased from Zanzibar slave market

THE SCRAMBLE FOR AND PARTITION OF AFRICA

By 1879, despite the steady increase in European powers in Africa, only a small portion of the African was under European rule. During the last quarter of the 19th Century and the beginning of the 20th century, European governments were claiming sovereignty over most African nations. There was increased European interest in Africa. Britain, Germany, France, Italy, Belgium and Portugal were in Africa competing for colonies.

By 1914, the lives of almost all Africans were being deeply affected by the changes brought about by foreign rulers.

The European powers partitioned Africa among themselves so hastily in the process called the scramble for Africa.

The reasons for the partitioning were because of economic factors on one part and European History on the other part

FACTORS THAT LED TO THE SCRAMBLE AND PARTITIONING OF AFRICA

The economic factors were as a result of the coastal trade that which European commercial companies had been carrying out for centuries. Between 1873-1893 the world passed through a severe economic depression,. Trade was low, Some companies went bankrupt, others partnered to reduce competition. Most of the Europeans look at their governments to cut out the African middlemen so that trades could deal directly with the producers, prices could then be lower and profits increased.

Similarly, in the middle of the 19th Century, the British held a monopoly of the manufactured goods in the world. In the 1880s they needed raw materials from Africa. But during this time France and Germany were also industrializing. They found it difficult to compete with the British merchants regarding quality and price of the commodities. Their merchants therefore

53 5

wanted colonies which they could exclude the British and other traders and from which they could obtain raw materials for their factories.

Political factors: The unification of Germany which led to her defeating France in the Franco Prussian war of 1870-1871 humiliated France, in her bid to regain her lost glory (the mineral rich Alsace and Lorraine) she felt that the competition in Europe was becoming too stiff for her, she turned to Africa to compensate for her losses.

The spirit of nationalism that was in Europe in 19th century was another factor. The nations felt they had to acquire overseas colonies for prestige. Citizens urged their governments to join in the colonial race.

Social reasons: Missionaries demand for protection

The partition process

Following the looming crisis in Congo region which Britain, France and Portugal were seeking to occupy, the Europeans came up with a strategy to peacefully divide Africa among themselves. The partition was therefore prompted by various European nations scrambling for territories in different parts of Africa. This culminated in the Berlin conference of November 1884- Feb 26th 1885 which established territorial boundaries. By 1914 territorial apportionments were as follows: Britain possessed territories in Southern Africa (Union of South Africa, Nyasaland, Swaziland). In EAST Africa it possessed the British East Africa Protectorate, (Kenya, Uganda and Zanzibar) and in North Africa (Egypt) Ethiopia, NIGERIA (Gold coast), Rhodesia. The French territories consisted of Algeria Tunisia, Madagascar, and much of the Sahara region. The Belgians possessed Congo, Burundi and Rwanda. The Germans owned Togo, Cameroon, and Tanganyika. Spain possessed Spanish Guinea. Italy owned Italian Somaliland, Eritrea and Libya. Portuguese possessed Angola, Mozambique

The Europeans went ahead and established colonial administrative structures in their respective territories. During this time the construction of railways and roads opened up Africa.

Colonial Education policies

There were in general 2 types of policies that the colonial administration established in African colonies. These were:

- a) Direct rule
- b) Indirect rule

Direct Rule

This policy was used by the French, Belgians and the Portuguese

This rule assumed that Indigenous African authority groups and administrative institutions were incapable of providing the kind of control and political security required by modern colonial government since they were illiterate and technologically backward

It sought to replace African categories of government with administrative units fashioned by European officials and operated largely by them

Indirect Rule

This policy was used by the British

Just as their European counterparts, they agreed that the indigenous political systems were not directly adaptable to the needs of the modern colonial government, they assumed that African authorities should have an established role in the colonial government.

It was therefore deemed desirable that indigenous African rulers who performed a wide range of government functions customary to African societies should

Advantages of Indirect rule

It was less burdensome, than importing European officials

It was easily adaptable rather than bringing in new administrative units as basis of colonial administration

It accepted the prevailing indigenous administration units as basis of local administration

This policy in educational terms was referred to as Adaptation

This was because of the British colonial practice emphasized cultural adaptation

In essence it involved the adjustment of metropolitan institutions to local political and social organizations and the creation of a group of educated Africans who at the same time would be rooted on their culture.

British Colonial Education Systems

To create a group of African civil servants who could who could operate an administration which though based on British models could be concerned with adaptation to African conditions of life In Lord Lugard's book 'the dual mandate in Tropical Africa, 1922, he sums up the ideas as follows

'The resident acts as a sympathetic adviser to the native chief, being careful so as not to interfere so as to lower his prestige or cause to lose interest in his work. His advice on matters of general policy must be followed, but the native ruler issues his instructions to his subordinate'

He argued that the school should be conducted according to the native customs in matters of dress, so that pupils do not consider themselves a class apart.

He emphasized that education results should be manifest in the adaptation of the people to the existing conditions of life and enabling them to effect some betterment and progress in those conditions

It was aimed at training the Africans to be able to achieve ideals of its own without imitating the Europeans in order to shape their own future

According to Lord Lugard adaptation could be used to combat political agitation, Literary Education had mischievous results and only produced hostility and ingratitude

Aimed at adapting education to the local situation

In their schools curriculum, some subjects laid emphasis on the local environment and vernacular languages were studied and used as a medium of instruction

French Colonial Education Approach

This approach was characterized by assimilation, and aimed at the creation of an elite cherishing metropolitan values and aspiring to be black Frenchmen

France based it on the fact that all French colonies would eventually become integral parts of the mother country

The ultimate goal of the assimilationists was the political, social and cultural integration of the colonial people into the French nation

This idea was based on the universal equality of man and the superiority of European civilization

The consequence for the people of the colonies was that their cultures were dismissed as of little value

Education was assigned the role of familiarizing students in the colonies with European economic, social and moral order, hence French education was not to be altered in structure, content and method.

The French Education policies aimed at creating a political and professional elite of a very high intellectual quality that would be identified as closely as possible with the French cultural image.

Therefore the education system had to be similar to that in France; the goal was to create French elite who could adapt African societies to the French model

Emphasis throughout the system was maintaining standards equivalent to those in France in the teaching of French language and culture

In contrast to the British system, there was no teaching of vernaculars even at the primary school level.

It was argued that there were too many vernaculars and it would be too expensive to train staff and print books in these languages

Christian mission Educational Policies

Most Christian missionaries entered most parts of Africa before the colonial governments.

However the establishment and expansion of colonialism provoked intense missionary activity.

The coming of the missionaries led to intensification of missionary activities in Africa. One significant characteristic was the high influx of missionaries into Africa between 1890-1914.

However after partition the Europeans provided an umbrella for Law and order for missionary activities. There was also the improvement of communication, roads and railways in particular and in almost areas there was remarkable record of missionary work. By 1910 it was estimated that there were 4273 protestant and 5977 Roman Catholic Missionaries.

The main objective of the missionary was to spread the gospel and win converts to their various denominations. (Evangelism). They found networks in village schools in which children of all ages would be given simple education in reading, writing and arithmetic alongside religious instruction leading to baptism and church membership.

Their early school, (mission schools) grew out of the desire to

- a) Win converts (African souls for Christ)
- b) Train African catechists and workers
- c) Create an African middle class (as a way of introducing European civilization)

The African was viewed to be very lazy. Hence they emphasized on education which emphasized the spiritual value of hard work and evangelical Christianity.

The missionaries stressed on the importance of manual work for Africans. There was a general agreement that Africans were lazy hence manual labour would fit them.

It was also advocated that African were not to be given the same education as the Europeans since Africans has stagnated in the genesis of the evolution process.

In 1859, Darwin in his book, through Origin of species, portrays Africans as very inferior species. Africans were therefore relegated to a position of inferiority on the scale of human development. The belief in African inferiority led many to conclude that Africans and their American descendants could not benefit from literary education. Their education was therefore geared towards manual occupations attuned to their developments.

They provided vocational education which was argued would help to teach Africans to be more industrious while at the same time instilling in them Christian values to counterbalance immorality. Christians drew encouragement from successful vocational programmes undertaken in Hampton and Tuskegee in the USA. These were institutions for training the American Nergroes since their situation was approximated by the African masses. The missionaries in Africa were not well funded, and were interested in winning souls at nominal costs. They also initiated money saving practices such as production of foodstuff for the mission, artisan skills such as carpentry, masonry, blacksmithing, bricklaying etc.

EDUCATIONAL ACTIVITIES IN KENYA DURING THIS PERIOD

Christian missionaries are rightly acknowledged as the founders of Western Education in most parts of Africa. The first group of missionaries can be traced back to the time of the Portuguese. The Roman Catholic Missionaries from Portugal worked in the coast in the 16th and 17th centuries. In 1557 Augustinian Friars established a monastery in Mombasa. They made sporadic contacts with the population although they did not take up sustained evangelical work.

The second wave of missionaries was that of Dr Johann Krapf in 1844. He was joined by Johann Rebman in 1848 and they decided to move from Mombasa, a predominantly Muslim town and established a CMS station at Rabai Mpia among the Mijikenda people. Krapf began by

57
22

translating parts of the bible into Kirabai to provide reading materials for his pupils in their preparation for Baptism. The school progress however was very slow since his attempts to persuade parents to send their children to school were generally unsuccessful.

The problem of freed slaves attracted missionaries and the British Government involvement in missionary enterprise to East Africa. This led to the establishment the freed slave station at Frere town near Mombasa. This school in Frere town was more successful in its educational activities. The curriculum involved the 3R's and the teaching of English and Kiswahili. Vocational subjects were also taught.

The scramble and partition of Africa was another driving force in the missionary enterprise. Under the Anglo-German agreement of 1890, Germany recognized Uganda as a British sphere of influence. Similarly British recognized mainland Tanganyika as German sphere of influence. Following the partition, Britain embarked on the construction of Kenya Uganda railway to provide an effective link between the Coast and Lake Victoria. Thousands of labourers were imported to work and at the same time the British Administration began to encourage white settlements as a necessity to make to make the protectorate. White settlements meant land alienation which was sparked off by the 1900 ordinance to create European settlements.

For the missionaries the partition of the mainland, followed by the establishment of the colonial administration and the construction of the railway line facilitated not only their expansion from the coast but were also joined by other missionary groups. They expanded inland and they also engaged in their own kind of scramble. This resulted in fierce competition between the Catholics and the Protestants which lead to divisions and resulted in putting up schools often as close to those of the rival group. Secondly since the missionaries were not generally prepared for education. Money was scarce trained teachers were in limited supply and no suitable curriculum was available. Thirdly many missionary teachers chose to use the new African desire for education to induce them into adopting the Christian way of life. They demanded that their pupils do away with some of their traditional activities beliefs and customs and accept a new way of life.

With time Christian missionaries found it difficult to shoulder Education by themselves. An important aspect of early educational development in Kenya was the Government missionary cooperation. This was facilitated by the formation of the missionary Board of Education in 1909 which brought together a number of protestant churches. At the same time Prof Nelson J Fraser of Bombay was commissioned to recommend the system of Education in East Africa Protectorate. In his report, Fraser placed emphasis on the provision of industrial education for Africans. On government missionary cooperation Fraser recommended that educational facilities for Africans should be provided by missionaries on the grounds that any education without Christian education would lack moral foundation. It also recommended the establishment of a department of Educated to facilitate the administration of the Education system.

Following the publication of the Fraser Report, the Department of Education was founded in 1911, with Dr J R Orr appointed as the first Director. Government grants in aid were also started

55

TERMS OF REFERENCE

- To assess the nature and quality of Education of Negroes both in Africa and in the USA
- To study the problems of Education in Africa. They focused their attention to the needs and problems of the Africans
- To make recommendations as to what would be the most desirable step to take in building a system of Education in Africa

FINDINGS

- This commission recognized the dismal state of African education both quantitatively and qualitatively.
- Little effort had been done by the colonial government to reorganize schools prior to and after the world war
- No much effort had been done by the colonial government to relate to school work the conditions and needs of the people especially in regards to health and agriculture
- The colonial government was not giving grants to mission schools as expected/agreed
- There was lack of Government - missionary cooperation in the regard to educational effort

RECOMMENDATIONS

- The report of the commission stressed the need for girls education
- Establishment of an Advisory council on native Education in each territory
- Education for character training
- The Director of Education to have define duties and should state the aims and Objectives of African Education
- Establishment of centers for teacher training
- Need for Education for Rural improvement/development
- Need for Adaptation of Education to the local needs- agriculture, in farming areas and industrial education
- Also recommended the need for census to aid better planning of education
- Definitions of the place of language and religion in African Education
- Building of secondary schools and other institutions of Higher learning
- The Report stressed the fact that education must conserve whatever was sound in African's life and submits the best that civilization and Christianity had to offer.

- Recommended a shift from pure learning based on abstract ethical concepts to making education an instrument for successful living
- The Language of instruction in school should be that which no child is handicapped
- Education therefore would be no longer a means to enable Africans to read the bible only.

Institutional developments

The interwar period witnessed a significant educational expansion in many of the colonial territories. In Sierra Leone for example 6 secondary schools for boys were opened these included the Prince of Wales, while for girls 5 secondary schools were started in this period. Teacher training colleges also rose up for example the Government Agricultural training at Njala, Bunumbu for protestant missions and Bo for the Catholics. Fourah Bay college offered degree courses in affiliation to the university of Durham.

In Gambia Christian Missions opened three secondary schools for boys and one secondary school for girls

In Ghana Protestant and Roman Catholic Missions opened 6 secondary schools for boys and 3 for girls. A number of private schools were also opened in main towns. Teacher education was offered at the Wesley College, Kumasi and the Government College Accra. The Roman Catholics opened their own college at St. Augustine, Amisano while the Church of England opened St Nicholas College, Cape Coast. Girls were trained at Navrongo, Tamale and the Methodist Women's College. The most outstanding educational landmark was however, the opening of Achimota College in 1924, which by 1930 was offering education, right from Kindergarten to University.

In Nigeria, 11 boys' secondary schools were opened by various Christian missions, while 4 were opened for girls. A notable development in this period was the founding of Yaba Higher College which pioneered University Education in Nigeria.

In Southern and Central Africa, 3 secondary schools were opened in Lesotho. Teacher Education for men was provided at Roma, Morija and Masite. St Mary's College at Leribe and St Catherine's college provided teacher education for women. In Swaziland the first teacher training college was started in mid 1930s. In Zambia 3 secondary schools were opened. Teacher Education was provided at the Methodist training Institute at Kafue and Sefula run by Paris Mission Society.

In Uganda there was considerable enthusiasm in Western Education after the End of the WW1. Three junior schools which had opened at the turn of the century started preparing students for the Cambridge school Certificate. An important development was the opening of Makerere as technical college in 1922.

62

71

EDUCATIONAL DEVELOPMENTS IN KENYA

The end of the WWI marked an important turning point in the African acceptance of Western Education in Kenya. The sudden change was as a result of so many factors.

- First, the most successful strategy was persuading leaders to send their children to school and subjects to send their sons to mission for training. The British encouraged the chiefs to send their sons to school so that they could succeed their fathers in ruling or assist their uneducated fathers in government business.
- Secondly with the establishment of the colonial economy the traditional society no longer held so much attraction for the youth. Education became the gateway to new occupations of the colonial economy, there was demand for farm labour for the settlers.
- After the WWI Africans had been exposed and participated as carrier corps hence they turned out to be the severest critics of government policies and some of the Western values through political organizations formed after the war.
- After the war there grew a mounting political agitation and this prompted an increasing government involvement primarily through its support to mission schools. In response to the Phelps-stokes commission which visited Africa in 1924, the government instituted the Education Ordinance which marked its commitment to supervise and direct Education at all levels. All schools and teachers were to be registered and the Director of Education was empowered to inspect all schools.
- It also instituted the District Education Board Ordinance in 1934, which marked a start of African representation and opinion in education matters. The DEBs functioned in various parts of the country. They handled allocation of grants, fees and scholarships, salary scales as well as maintaining register of schools.
- The development of secondary education was painfully slow, the Alliance high school was the first secondary school in the colony in 1926. It was followed by the Holy Ghost School, Kabaa in 1930, which was later transferred to Mangú in 1934. In 1938 Maseno school was opened and in 1939 Yala was opened.
- In 1935, plans were underway to establish teacher training centers by the missionaries. This was a result of the Pim report which complained about the high financial expenditures brought about by large numbers of European teachers in such schools

AFRICAN CONTRIBUTION TO THE DEVELOPMENT OF EDUCATION IN KENYA DURING THE INTERWAR PERIOD

63

Africans were not passive recipients of the Western type of Education. They made efforts in providing education for themselves as a result of what they saw as deliberate effort on the part of the colonial administration to limit their educational opportunities.

- Through the Local Native Councils, Africans taxed themselves and voted funds to set up new schools which were secular and divorced from missionary influence. Such schools included Kapsabet, Kabianga, Kisii, Kagumo
- Africans too intensified their efforts in establishing Independent schools. In Central province the female circumcision controversy led to the formation of Independent churches which in turn set up their own schools under the umbrella of Kikuyu Independent Schools Association and the Kikuyu Karinga Education Association in 1935. In Nyanza, John Owalo of the Nomiya Luo Mission sect expanded his schools in many parts of the region. They set up independent schools to supplement government and missions in providing education.
- Africans formed political associations such as YKA, KCA to agitate/champion for their educational rights. Better educational facilities and the literary kind of education that the European and Asian children were getting
- They contributed large tracts of land for school building
- They provided labour (Manual) for construction of schools
- They (especially chiefs) ensured peace and maintained peace and tranquillity to the colonial government and the missionaries
- Africans provided children who went to the schools
- Africans who had been educated in the missions took up teaching jobs and other kinds of employment that were important in the running of educational institutions
- Africans rejected the religious type of education that was being offered and hence contributed in reform of school curriculum
- Africans fought against racism in education
- Africans provided building materials such as wood, etc for building of schools.

In summary, the interwar period in Kenya marked a stage whereby there was a steady growth in the development of education at all levels. By 1940, there were two senior and two junior secondary schools, all started by missionaries with government assistance. Although the colonial administration generally provided grants to missionaries to run education for Africans, its main

69

69

concentration was on European and Asian Education to which it provided grants which were disproportionate to their contribution in taxes.

Poor government financial support to African education led Africans to begin their own initiatives to expand education.

In terms of emerging social and economic classes, it was the new African elite, the product of Western Education, who formed and pioneered the first nationalist movements that started to oppose the imposition of colonial rule.

Class Activities

1. Discuss the Phelps-Stokes Commission in the development of Education during the Interwar period
2. Critically assess the role of the colonial administrators in the development of education during the interwar period
3. Discuss the role of Africans in the development of Education during this period

TOPIC 9:

EDUCATION DEVELOPMENTS DURING THE POST WORLD WAR II (1946-1963)

Objectives

- Describe the major educational developments in Kenya during the post war period
- Analyze key policies in Kenya and how they influenced educational development

Introduction

This topic discusses policy framework leading to post WWII overall development and educational development in Africa and Kenya

Policy Framework

65
E

Before the outbreak of the WWII, the pace of change in Africa since the establishment of the colonial rule had been steady but slow, the WWII considerably increased the momentum for change in Africa. This was due to a number of factors:

First, this was brought about by the psychological effect on the assumed superiority of the Europeans that had for long contributed to the subjections of Africans. The mental attitudes of the Europeans and Africans towards each other were greatly changed. Previously, the Europeans had dominated Africans, not only because of their economic and advanced military power, but also because they believed they were superior and invincible (unconquerable/unbeatable). The First World War destroyed this myth of White superiority.

Secondly, during the war soldiers from all over Africa were recruited by Britain and France to fight in many parts of the world. While in these areas the Africans learned to see their own countries from an outside perspectives. Upon their return home, many of them spearheaded the Independence movement, as they were also an important source of new ideas.

Thirdly, the WWII created in many territories an economic boom as local manufacturers began supplying goods that no longer came from Europe following the disruption by the war, this development put more money in the pockets of producers. Consequently many people began flocking into towns from the countryside to take up new jobs. Many cities doubled in size

The increase in population in towns too led to unemployment since the new jobs were not as numerous as the people who came to look for them.

With greater number of people able to read newspapers, there was increased demand for social, economic and political reform.

The Second World War destroyed the myth of white superiority. Several colonial powers were defeated and publicly humiliated. In the military trainings Africans realized the behaviour of the white soldiers was not as arrogant as that of the colonial officials, settlers and traders. Furthermore some of the African soldiers were quite appalled by the colonial conditions, they made African friends and some took part in secret political discussions, which condemned British and French colonial rule.

After the war the drive for change began. The economic and social conditions created by the war led to serious impatience. This even increased as the Europeans concentrated on the reconstruction of their economies to the neglect of their empires. This resulted in the formation of new and more militant political parties that were ready to resort to use of violence and force where they failed to get concessions by way of persuasions.

The WWII resulted in new policy statements. At the end of the war most of the primary school levels in the French and British territories were offering only four years of education. The first post war priority was to extend the four years to six, with an emphasis on teaching a European

64

67

language. The main problem was to train enough primary school teachers who had the necessary qualifications in English and French.

The most significant educational development in 1940s was the establishment of primary teacher training centers throughout colonial Africa

In 1943 the Elliot Commission was set up to examine the organization and facilities of higher education in the colonies. The commission reported that the development of universities was an inescapable venture in any policy which aims to achieve self government. Within four years after the WWII, four university colleges were opened at Ibadan in Nigeria, the Gordon Memorial College in Sudan, Achimota in Ghana, and Makerere in Uganda. In 1953 the University of Salisbury in Zimbabwe was added

EDUCATIONAL DEVELOPMENTS IN KENYA

In Kenya the end of the WWII increased African sensitivity and aspirations. There was the return of the African ex-soldiers who had high economic and a political awareness.

The slow and steady expansion of secondary education coupled with higher education opportunities offered at Makerere and outside were leading to the emergence of educated elite at the national level, which started to question the performance of the colonial system

With the emergence of the new elite the nationalist movements took a completely different turn, their aim being to overthrow the colonial government. Dependence on Europeans and Asians became a thing of the past because of the new educated leadership. Literacy and linguistic qualification made the new leadership different. Because of language and education, it became easy for tribal societies to communicate in the colonial context. The elites became spokesmen of their societies through a process of nationalism whose main unifying force was the presence of the colonial powers

Kenyans formed political Associations such as KAU, which was the most prominent to articulate the national issues facing the Africans. BTW 1944-1952 the number of Africans in the Legislative council increased from 1 to 6(Ask class to find out the first African-Kenyan to be elected into the legislative council)

By the beginning of the emergency in 1952, KAU had not achieved the expected economic and political reforms by peaceful means and hence more violent methods for self determination were adopted through the MAU MAU struggle.

The achievement of independence by India, further spurred the desire for Independence by Kenyan and other countries.

EDUCATIONAL POLICIES

62

- ✦ The Colonial Development Act of 1945 marked a significant shift from the traditional policy of colonial self sufficiency to a policy of giving considerable amount of Aid to the colonies.
- ✦ The 1948 Memorandum of understanding for citizens. This document went beyond previous statements by stating that literacy and technical education and skills were not enough to a rapidly growing world. It stated that education must develop a sense of public responsibility and democracy that was to be lived and not just taught by the curriculum.
- ✦ The Beecher Report. This report was done under the leadership of Archdeacon J. Beecher, he was appointed to examine and report on the scope content and methods of African Education system in 1949. The report indicated that the expansion of primary schools had been done without adequate financial provision and control, hence there was need to control the high primary school expansion, It stressed the importance of practical education for Africans
- ✦ The report structured the Education system by introducing a 4:4:4 system of primary, intermediate and secondary schools to replace the 6: 2: 4 organization. Primary education was to be restricted to four years with a minimum entry at 7 years and with much closer government supervision, the aim of restructuring the system was to present each stage in education as a complete course in itself to fit those pupils who might leave at any stage with competent and active roles in the society.
- ✦ The Binns Report of 1952. It visited East Africa in 1952. This report recommended the preservation of selected tribal vernaculars while advocating for the general elimination of Kiswahili except when it was used as a local vernacular. It reasoned that the use of Kiswahili as a lingua Franca impeded the learning of both vernacular and English. It advocated for the teaching of Agriculture at the primary school level especially for those who did not continue learning. It also recommended the expansion of teacher training as a way of improving the quality of education

ELEMENTS OF THE EDUCATION SYSTEM DURING THIS PERIOD

During this period primary education was an important segment of the school system and it provided more educational opportunities for the African children

The expansion of primary school education was generally uncontrolled and of low quality especially at the lower levels

There was prevalence of vernacular at the village schools conducted by catechists or untrained teachers of most missionary bodies

KELVIN EKALIYO

Before the introduction of the 4; 4; 4 system by Beecher, primary education lasted for 6 years, followed by two year Junior secondary education then the students sat for the Kenya African Preliminary Examinations (KAPE)

An emphasis was placed on the importance of relating education to the child's needs at the primary level. It was to include opportunities for physical development and recreation for learning manual skills and acquiring some facilities in simple creative arts. It was to provide skills in reading writing and number work

In the 4; 4; 4 system the primary pupils took a Competitive Entrance Examination in the fourth grade and proceeded to intermediate schools where there was strong emphasis on agriculture and handcrafts. In the 8th grade they sat for KAPE. The medium of instruction at the primary and intermediate was vernacular for the lower grades. In the secondary level at the end of the four years pupils took the Kenya Secondary Certificate exams. Secondary Education during this period was very slow. The academic standards were very poor. This was due to the low quality of some teaching staff, frequent transfers and inconsistent leadership of the schools.

In Higher Education, Makerere continued to be the main centre for higher education for all the East African territories. The first Kenyan based institute to provide higher education was the Royal Technical College of East Africa situated in Nairobi, which was established in 1954. The funds for its construction came from the Colonial Development and Welfare Fund. By 1957 it had established the Departments of Arts, Domestic science and Architecture. These were three year courses which led to award of special certificates and not degrees. The two working parties on higher education in East Africa, one by Sir Alexander Saunders in 1955 and another by John F Lockwood in 1958 recommended that each East Africa territory, should establish a university college.

In 1961 the Royal Technical College was changed to Royal College, Nairobi, and started to offer degree courses, in 1963 became the University College of Nairobi, with the establishment of the University College of Dar-Es-Salaam.

Other post war developments in African education included the expansion of primary teacher education, the establishment of technical and trade schools for artisans and the establishment of Kenya Polytechnic in 1961.

SUMMARY

In summary, the WWII Considerably increased the momentum for change in Africa. This was due to its psychological effect on the assumed superiority of the European which had for long contributed to the subjection of Africans, the return of the ex-war veterans and the growth of industrialization which in turn led to rural urban migration as a key factor in the rise of nationalism.

In Kenya, while the WWII had made significant impact on the British government, in general, and the colonial office in particular, to perceive the post war as a period of change in which colonies were to be prepared for eventual self rule through education, this had very little effect on the colonial administration. African education continued to be given less funding by the settler dominated legislative council.

TOPIC 10:

EDUCATIONAL DEVELOPMENTS AFTER INDEPENDENCE

Objectives of the topic

- Analyze the major policy framework that influenced educational Developments following the attainment of Independence
- Discuss key educational policies that guided educational developments in Kenya following the achievement of independence
- Discuss some institutional developments in Kenya after the attainment of Independence

EDUCATIONAL POLICY FRAMEWORK

After independence, most African countries placed considerable importance of the role played by education in the promotion of socioeconomic and political development. The education system was therefore expected to fulfil two particular objectives

- a) The technical objectives of furnishing future human resource with requisite skills and knowledge
- b) The social objective of inculcating values which enrich peoples' lives and maintain cohesive productivity

Education was to most countries stressed the potential of education to in fostering knowledge, values and skills necessary for productive activity. Implicit in this concept, therefore was that education and development should approximate the institutional forms underlying values of Western Industrialized nations. There was also the belief that movement towards this desirable condition could be accelerated by using schools to develop the knowledge and skills which had proved useful in those nations. Educational reforms therefore aimed at promoting the efficiency of the school system in relation to production, which meant heavy government expenditure on education.

Many factors influenced the above development perspective, which largely contributed to the expansion of Education; this included:

The Report of African States on the Development of Education in Africa. This report was an outcome of a conference of African Leaders which was held in Addis Ababa in May 1961 under the joint sponsorship of UNESCO and the Economic Commission for Africa (ECA). The goal of the conference was to provide a forum for African states to decide on their priority educational needs in order to promote social developments in the continent.

The conference report stressed Africa's need for more and better educational opportunities and suggested that of education be adapted to fit the area of independence. Although mention was made of the need for agricultural training and community development, emphasis was on more academic reform, such as inclusion of African History, and culture in the curriculum and the importance of meeting high human resource requirements of the emerging nations. Greater

urgency was therefore assigned to the development of secondary and post secondary education rather than universal primary.

In March 1962, African minister of education met in Paris to discuss the Addis Ababa plan. They agreed that the machinery for Educational planning was necessary in each country and recommended that UNESCO arranges study grants and seminars on educational planning. Another meeting to implement the Addis Ababa [plan was held in Kinshasa in March 1963 which called for more aid from UNESCO and other sources to help African nations meet their increasing educational expenditures

The Tanarive Conference on the Development of Higher Education in September 1962 also met under the auspices of UNESCO and ECA. It dealt with higher education and its role in cultural, social and economic development of African Countries. It adopted the Addis Ababa conference approach in estimating the qualitative and quantitative educational changes necessary to meet the human resource requirements for developing nations. The conference also established targets in higher education and made recommendations for the overall planning, financing curriculum and staffing of higher education institutions in Africa in the next twenty years. It also indicated the responsibility of higher educational institutions, i.e. apart from their teaching and research functions, to assist in advancement of African nations and the unification of Africa.

The report distinguished between degree and non degree students and recommended that the percentage of students enrolled in science technology and agriculture be increased substantially,. It also argued that to avoid duplication and dissipation of scarce resources the needs of African could best be met by linking the number of higher institutions in the region.. Cooperation among African countries and aid from outside agencies were stressed as basic to the future development of the continent.

The Abidjan regional Conference on the planning and organization of Literacy programmes in Africa held in March 1964 also reviewed the question of regional targets set by the Addis Ababa Conference and indicated the need for accepting them as a form of guidance for each country to work out and establish its own rate for expansion in the light of the resources available. It placed emphasis on the role of education in the economic and social progress of communities, particularly those in rural areas. It gave due attention to the problems of wastage and primary school leaver unemployment.

The Abidjan conference further re-examined the question of scientific research and adult literacy and emphasized the need for their inclusion in all educational plans. Literacy and vocational training were considered as the basic requirements for adult education. The conference recognized literacy as a functional concept contributing to the development and use of resources. This brought into focus a new meaning of adult literacy which gained full recognition and support at the Teheran conference in September, May 1963.

KELVIN EKALIYO

The Lagos conference on the organization of Research and Training in Africa in relation to Study, conservation and Utilization of Natural resources in July, 1964 addressed the organization and financing of scientific research and technical training in order to make the best use of natural resources and improve economies through industrialization. The conference gave attention to the teaching of science and other subjects related to natural resources.

EDUCATIONAL EXPANSION

Therefore in line with the main educational focus of the Addis Ababa conference, the orientation of education shifted towards training African to fill high cadre level positions in the public and private sectors. At the same time the new independent governments were aware of the difficulties as well as the advantages of the colonial educational systems, the most critical problem was that of human resource development. In the eyes of many African nationalists, the colonial government had deliberately suppressed the expansion of higher education institutions in order to limit the number of Africans taking important jobs in the administration or the private sector. To meet such demands and public demand for higher education the new governments began to devote large portions of their income to education. Priority was put on the expansion of secondary and higher education.

In Sierra Leone there was a rapid expansion of secondary schools following the attainment of independence such that in 1975 the government curtailed the opening of more secondary schools due to large numbers of unemployed school graduates. Another university apart from the Fourah Bay was opened at the agricultural institute at Njala. The neighbouring Gambia also expanded its secondary education although it did not immediately open a university.

In Ghana developments focused on the expansion of secondary and higher education. The second development plan of 1959-1964 projected the capital investment in education as 22.8 million pounds of the total expenditure. The objective was to raise secondary school intake to 10% of the potentially eligible candidates compared to the previous one of 4% - 6%. Two universities were opened in addition to the University of Ghana. These were University of Science and Technology at Kumasi and the University of Cape Coast, which mainly trained teachers at graduate and post graduate levels.

In Nigeria there was significant expansion in secondary and university education. Before her attainment of independence in 1961, a six year educational plan of development was devised following the Ashby Report in which 32.8 million pounds were to be spent. Three fifths of the expenditure was earmarked for higher education including assistance to the University of Ibadan and the establishment of a new university in Lagos. Other universities which opened in the 1960s included the University of Nsukka in 1960, university of Lagos in 1962, the University of Ife in 1962. More universities were opened in the 1970s. They included the University of Benin in 1970, the University of Sokoto, university of Jos, university of Port Harcourt, university of Ilorin, University of Bayero and university of Kano all in 1976.

60

13

In the French colonies for example in Senegal there was rapid expansion in secondary and higher education. There were nearly 60000 students enrolled in secondary education. University of Dakar expanded to embrace all faculties. In Togo the former centre of higher education became upgraded to the University of Benin. In Niger the University of Niamey was started in 1974. In Gabon, the national University of Libreville was established in 1971 after the dissolution of the Foundation of Higher Education in Central Africa (FESAC), which had served as the central university – level institution for all French speaking Equatorial African states. In Congo republic, the University of Brazzaville was set up in 1972 while in Cameroon the University of Cameroon was started at the same time.

In the southern states of Lesotho, Swaziland and Botswana major expansion were made on their secondary education systems. At the university level they established the federal university of Botswana, Lesotho and Swaziland (UBLS). In 1975, of Lesotho Government however withdrew from the UBLS and established the National University of Lesotho. The led to the collapse of UBLS with Swaziland establishing the University of Swaziland with campuses at Kwaluseni and Luyengo. Botswana also followed suit and established the University of Botswana in 1983.

In the Central African states of Zambia, Malawi and Zimbabwe the achievement of independence by Zambia and Malawi sparked off rapid expansion in secondary education. It also marked the collapse of federal University of Salisbury, with Zambia establishing the University of Zambia with campuses in Lusaka, Ndola and Solwezi and Malawi establishing the University of Malawi. Zimbabwe which attained its independence in 1980, renamed the University of Salisbury, the University of Zimbabwe.

In East Africa both Uganda and Tanzania experienced a rapid expansion in secondary and higher education. In Tanzania for example the three year plan, after the attainment of independence in 1961 proposed that a high proportion of central government funds available for education be devoted to secondary school expansion. Between 1961-1962 about 30 million pounds was spent on education. University college of Dar es salaam was established, while Uganda concentrated on the expansion of Makerere University.

POLICIES AND DEVELOPMENTS IN KENYA

Just like every other country Kenya placed a considerable emphasis on the role of education in promoting economic and social developments. This perception was also motivated by political pressures. Already the demand for more secondary education was being manifested in the mushrooming of the Harambee Secondary Schools (self help schools) Adopting the Kiswahili phrase Harambee (lets pull together), from the ruling party's motto, self help became a vital addition of Kenya's secondary school system.

In terms of planning the Kenyan Government seemed to have been influenced by a number of factors. First was the Addis Ababa Conference Report.

Second was the request made by the Kenyan Government and the United Kingdom to the International Bank for Reconstruction and Development to undertake a survey of the economic development of Kenya in 1961. The team studied all aspects of Kenya's economic development and education was treated as one among the many sectors that needed funds.

Immediately after Kenya gained independence in 1963, the Ministry of Education appointed a commission the Ominde Commission to survey the existing educational resources and advise the government in the formulation of National Policies for education. On education and human resource development, the Commission Report was strongly influenced by the then existing international opinion as well as the internal political and economic forces.

The Commission endorsed as a valid educational objective the need to provide free primary education. Its contribution to the economic progress both by providing a reservoir of candidates for secondary and higher education and fulfilling the minimum basic education requirement for participation in the modern sector of the economy was recognized. Consequently, on the basis of the Commissions' recommendation, the government chose to place the main emphasis on the expansion of secondary education and the higher levels of education and on gearing them to human resource needs of the modern sector of economic life while at the same time providing facilities for a slow but steady increase in primary school enrolment

It was noted that if the African was to occupy and exercise real power in his society he had to acquire an education similar to that of the European and only then could he be qualified to take over these positions in the government and in the modern sector of economy life formerly held exclusively by the Europeans and Asians.

For these reasons school enrolment at secondary and University shot up considerably. In 1963, the enrolment in all secondary schools was approximately 30000 students. Taught by 1,600 teachers. In 1969 the enrolment rose to 115000 while in 1983 the number of secondary schools totaled to about 2,000 with an enrolment of half a million. University enrolment rose from 452 undergraduates in 1963 to 5454 undergraduates and 1381 postgraduates in 1983. Since then the Kenya government continued to act as if education for human resource still remains a very serious problem. In 1984, Moi University became the second University, Kenyatta University which had operating as a constituent college of the University of Nairobi became a fully fledged university in 1985. This was followed by Egerton University in 1986. In 1988 Jomo Kenyatta College of Agriculture and Technology also became the Jomo Kenyatta University of Agriculture and Technology, followed by Maseno University in 1999. The six universities now have a high student enrolment rates.

Class Activities

1. Discuss the major recommendations of the commission Report of 1964 (The Ominde Report).

TOPIC 11

EDUCATION IN AFRICA ISSUES AND CHALLENGES SINCE 1980

ISSUES IN PRIMARY EDUCATION

Introduction

The report of the conference of African states on the development of education which was held in Addis Ababa in 1961, under the joint sponsorship of UNESCO and United Nations Economic Commission for Africa agreed on targets each country was expected to achieve in the post independent period. As regards primary education the conference set the goal of achieving universal primary education by 1980. For many African countries the achievement of UPE has been illusive. The commitment to achieving this goal has consequently been restated repeatedly in world meetings of education.. It was for example restated in the world conference on education for all in Jomtien in 1990 and the world Education forum in Dakar in 2000. The year 2015 is the newest set date for achieving UPE. Since the Addis Ababa conference of 1961, UPE has been the most pressing issue in African education. The concern for Universal primary education has been based on the belief that an educated population is essential if African states

76

are to develop and reap the fruits of globalization. It is based on the realization that quality primary education is a precondition of both personal and national development.

ISSUES

African countries are experiencing the problem of sustaining the goals of UPE mainly because of its cost. Even where education is free some costs are passed on in form of charges of books, uniforms, examination etc. These direct costs can reach up to 20% of the family's income and thus making it unaffordable to many. It follows therefore that unless there is permanent solution to financing the recurrent costs of UPE is found, its realization will remain a dream.

Tanzania for example introduced UPE in 1974, to make primary school universal, compulsory and free. In 1980s Tanzania was experiencing difficulties in financing social services. Textbooks and other teaching materials became scarce, local communities were asked to contribute to the running of primary schools due to declining resources. This increased though 1989s culminating in the formal reintroduction of enrolment fee in 1995. In April 2001 it was announced that Tanzania was going to introduce free primary education for all

In Nigeria UPE was started in 1976, following there was increase in enrollment resulting in shortage of facilities and teachers, teachers morale also declined coz of heavy teaching load and crowded classes. In an attempt to salvage the situation states began to ask for contributions from parents. In 1999 UPE was replaced by UBE universal Basic Education, a more ambitious programme since it includes secondary education.

In Uganda UPE was introduced in 1997, in this programme the government committed towards providing free education to children in a family. The first primary seven pupils sat for examination in 2003 and the govt was expected to provide adequate places in secondary schools for the pupils. Without this the transition rates from primary to secondary will fail and UPE will take longer to achieve.

Secondly, is the issue of quality primary education. One of the problems of free primary education is quality. Quality of education has been largely compromised in the efforts to provide universal and free primary education. Many children from poor families drop out of school or fail to enroll as result of poor quality schooling. It has been observed that a large number of children especially from sub Saharan Africa, leave primary schools functionally illiterate due to this fact. To correct this there should be effective teacher training programmes, putting up better schools, writing proper textbooks, etc

HIV/AIDS pandemic is another issue. Attendance of both pupils and teachers is affected by the disease. This happens in situations where children become heads of households or are kept at home to care for the sick family members. There is evidence from some countries that attendance rates are declining particularly of girls. High sickness levels and death among teachers is also a growing problem in many countries.

77

86

Child labour is another issue that has affected education. There are more than 250 million child labourers worldwide. They mainly come from poor families usually headed by single mothers. Children from the poor are at risk of terminating their studies without completing primary school cycle and to seek paid employment to get food for their families.

Gender equality is another issue. There is need to remove barrier that hinder the girl child from accessing education. These include religious and customary barriers. Girls need to be protected from early pregnancies and marriages. Girls are the ones who are always given family chores such as cooking, or doing house cleaning. Irrespective of this when it comes to making decisions on who is to send to school the girl child is discriminated. Girls are often the last to be sent to school and first to be withdrawn.

ISSUES IN SECONDARY AND HIGHER EDUCATION IN AFRICA

In this topic we shall discuss the major issues and challenges that face secondary and higher education in Africa.

Issues in secondary education

Access

There are low transition rates of pupils from primary to secondary school, which means that in there is low access to secondary by a majority of pupils in the relevant age group. For example in 2002 the gross enrolment Ratio in secondary schools was 26% in sub Saharan Africa. In 2004 only 46% of those pupils who sat the KCSE exam in 2003 got places in secondary schools. Some children have schools far away from their homes.

Indiscipline and violence

There have been various interruptions to schooling in various schools in Africa, these cases include murder, rape destruction of property, and arson. The major causes have been identified as erosion of moral values, drug abuse, poor management and conflict resolution methods, the challenges of adolescence, etc. This has impacted negatively towards secondary education.

Teacher qualification

Another challenge that has faced secondary schools is that most schools in Africa experience shortage of qualified staff. There are also cases of lack of staff. Majority of public secondary schools are poorly staffed hence the perennial poor performance in examinations.

Equipments and facilities

Most schools also lack appropriate facilities and equipments and basic teaching and learning materials. This has been worsened by the reduced government funding for education and the

focus on the attainment of EFA goals that have focused attention on the expansion and improvement of basic primary education.

Gender disparities

In most African gender disparities in terms of access to secondary education is high. For example in the year 2002, the GERs for girls and boys were 22% and 14% respectively in sub Saharan Africa. In Kenya the rate of boys and girls in the rural and urban areas were 22% and 47% respectively

Regional disparities

In most African countries ASAL areas are characterized by scarce resources and harsh climatic conditions and as results education access is very low. The ratio for ASALs in Kenya for example in 2002 was 20% compared to 55% in central province, one of the more developed areas in the country. This shows that there are regional imbalances in access to secondary education

High rates of wastage

Secondary education in Africa has been characterized by high rates of wastage. These wastages include high dropout, repetition and absenteeism, low transition rates to post secondary education and failure to secure employment after graduating.

Poverty

Relevance: in terms of content, curriculum

ISSUES IN HIGHER EDUCATION

The term higher education is used to refer to a variety of non university and university post secondary institutions, which act as a venue for advanced skills and knowledge development. They include universities, colleges, professional institutions, vocational institutions

Financing

There have been persistent economic stagnation and adoption of donor prescribed adjustment programs since the 1980s which have resulted in the reduction of Africa governments' capacity to finance public services including higher education. Consequently the expansion and maintenance of facilities has practically stagnated, as has the improvement of staff remuneration and working conditions.

Solution:

- ✓ The challenge is for higher education to reduce expenditure
- ✓ Seek new sources of income generation projects
- ✓ Improve utilization of existing facilities

Blank Academic years

Despite the fact that now most African countries are democratic, since the 1990s, government responses to student and staff discontent have clearly demonstrated that Africa's new regimes have not internalized dialogue or active engagement as a means of conflict resolution. The clamp down syndrome has remained persistently, resulting in students, workers and lecturers adopting even more militant and defiant positions. Consequently the prolonged strikes have become feature of Africa's higher education scene, leading to what is called blank academic years

Ethnic and Regional Equity

The political favoured and economically more developed regions in Africa are overrepresented on institutions of higher learning. The issues of geographical and cultural representation are crucial not only for fairness but also for national cohesion and long term political stability

Redefining the mission of Higher education

The role of higher education in Africa has been described in various ways. In 1962, UNESCO stressed the need for higher education to integrate in equal measures the classical mission of production, transmissions and utilization of knowledge to that of promoting heritage contributing to the reinforcement of independence and African unity. Although this mission still holds validity, in the 21st century the challenge is to articulate the mission of higher education in the face of the fast changing world dominated by a global culture in science, Technology, Economics and politics. Of particular concern is that some market oriented institutions that have come up, serve a narrow sectarian and commercial interests of their sponsors. In the same category could be some public institutions that are departing from their stated missions to pursue narrow market oriented programs to generate income in the face of reduced government spending.

The major challenge is dealing with the mission of higher education with regard to developing high level manpower; development and use of new and appropriate knowledge and technology, including serving society

Solution; To realize its mission higher regionally has set in motion expansion programmes to meet the ever increasing demand for education, example being module 11; establishing market oriented/driven courses

Gender equity

There have been various efforts to increase awareness of the potential necessity of including women into development processes, but despite these efforts, their access to higher has increased only marginally since the 1980s and currently averages at 25% of the majorities in African countries. Imbalances in gender representation are even more pronounced in the academic and administrative staff in African universities. At the highest levels of management, women have served only as chief executives in only a few of Africa's universities.

Declining standards of quality

In most African countries there is a rising number of secondary school graduates and the inability to plan for and manage university enrolment growth and reduced funding which have resulted in a number of problems including, Excessive number of students in lower cost social sciences and humanities, Declining educational quality, growing graduate unemployment, overstretching of facilities as student populations substantially exceed the numbers for which campuses were originally designed, and high staff-student ratios, which place more demand on teaching expertise and time at the expense of quality

Management of space

The advent of mass higher education, changing demands, high costs of construction have brought the problem of space creation and management to the fore in Africa's institutions of higher learning

Solutions

- ✓ Set up satellite campuses
- ✓ Distance studies
- ✓ Trimesters

Increasing access to higher education

There has been indeed a problem in the representation of the diverse socio-economic class, the low class in the society has been underrepresented

Solution: Kenya has established HELB to provide loans to those qualified to join institutions of higher learning including living expenses

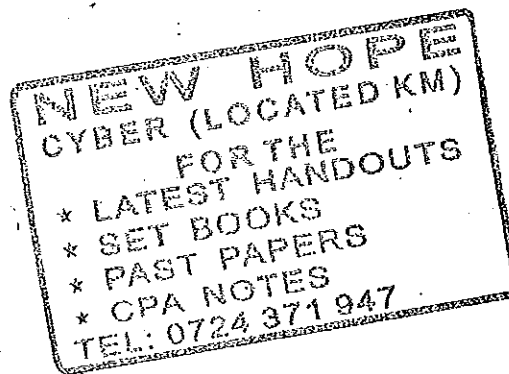

Dilemma of recovering loans dispensed to higher education students and at the same time not providing loans for students studying overseas

Class Activities

1. Discuss the major problems facing primary Education in Africa
2. Discuss the major problems facing secondary Education in Africa
3. Discuss the major problems facing Higher Education in Africa

KENYATTA UNIVERSITY

UNIVERSITY EXAMINATIONS 2019/2020

SECOND SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF EDUCATION

EFN 102: HISTORY OF EDUCATION

DATE: Monday, 26th October 2020

TIME: 8.00 a.m. - 10.00 a.m.

INSTRUCTIONS:

- i) The paper consists of THREE sections A, B and C.
- ii) Answer ONE question from each section.
- iii) ILLUSTRATE your answers with suitable examples.

SECTION A (24 Marks)

*Question One

"Without the ancient Egyptian Education, modern day education would have been doomed." Evaluate the truth of this statement citing examples where necessary.

Question Two

"Education in Europe and by extension the world over would not be where it is today without the early contributions of the mainstream religions." Using either Christianity or Islam, authenticate the above statement.

Question Three

Discuss the contributions of any ONE of the following educators to the theory and practice of education.

- (i) Jean Jacques Rousseau
- (ii) John Amos Comenius
- (iii) Johann Heinrich Pestalozzi
- (iv) Maria Montessori

SECTION B (23 Marks)

***Question Four**

Discuss the missionary factor in the development of education in Africa before 1920.

***Question Five**

Compare and contrast the British and the French colonial education policies.

Question Six

Since independence African countries sought to promote education for human resource development. Discuss how education was designed to meet the objective above.

→ Availability of ppl.

→ Quality

SECTION C (23 Marks)

***Question Seven**

"The First World War set the impetus for the development of education in Kenya." Discuss this statement in the light of educational development in the country during the inter war period.

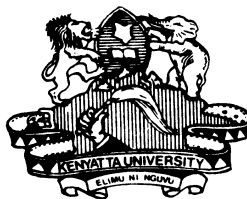

Question Eight *

One of the greatest problems facing Kenya is that of school leaver unemployment. Critically evaluate measures taken by the government of Kenya to curb this problem.

***Question Nine**

Discuss the impact of the Becher Report on the development of education in Kenya.

- setting up technical training centres
- youth dev. projects
- providing technical training
- to help ppl. get jobs
- setting up business
- dev. of youth training programmes
- Food & Economic Aid
- Education & importance of schooling
- girls' boarding

KENYATTA UNIVERSITY

UNIVERSITY EXAMINATIONS 2010/2011

INSTITUTIONAL BASED PROGRAMME (IBP) - (AUGUST SESSION)

EXAMINATION FOR THE DEGREE OF BACHELOR OF EDUCATION

EFN 204: SOCIOLOGY OF EDUCATION

DATE: Wednesday 29th December 2010 **TIME:** 2.00p.m -4.00p.m

INSTRUCTIONS: Answer **THREE** questions only.

1. a) Define sociology of education
 b) Discuss/show the usefulness of sociology of education to someone who plans to teach in his/her country.
2. a) Define the term 'socialization'
 b) Using relevant examples, show any Four agents of socialization and how they have failed to socialize the learners positively in schools.
3. a) Differentiate between 'social stratification' and 'social mobility'.
 b) Using relevant examples, show how Education stratifies the members of society.
4. a) Define the term 'gender'
 b) Identify Four (4) gender related issues and show how each issue can affect the girl-child Education.
5. Discus the proposition that "teaching profession is regaining its lost glory in Kenya".

SECTION 2
SECOND SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
EDUCATION

EFN 204: SOCIOLOGY OF EDUCATION

DATE: Tuesday, 2nd April 2019

TIME: 2:00 p.m. to 4:00 p.m.

INSTRUCTIONS:

ANSWER QUESTION ONE (COMPULSORY) AND ANY OTHER TWO QUESTIONS.

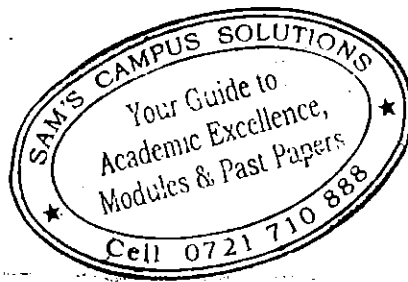

1. a) Differentiate between Sociology and Sociology of Education. (4 marks)
- b) Describe the origin and development of Sociology of Education as a discipline of study. (6 marks)
- c) Explain why Sociology is regarded as a Science? (4 marks)
- d) Discuss FIVE significant issues that are a concern of Sociology of Education. (10 marks)
2. a) Distinguish between qualitative and quantitative research approaches of understanding educational issues. (11 marks)
- b) Explain FIVE ethical issues that researchers in Sociology of Education must observe during their research. (12 marks)
- * 3. a) Differentiate between Gender and Sex. (4 marks)
- b) Using appropriate examples, discuss FIVE manifestations of gender inequalities emanating from the schooling processes in Kenya. (10 marks)
- c) Suggest any FOUR strategies to address gender inequalities identified in 3b above. (8 marks)
4. a) Discuss any THREE characteristics of culture. (6 marks)
- b) i) Describe agents of socialization. (2 marks)

INVOLVEMENT IN ANY EXAMINATION IRREGULARITY SHALL LEAD TO DISCONTINUATION

b) ii) Illustrate the contribution of any FIVE agents of socialization to the teaching and learning processes. (15 marks)

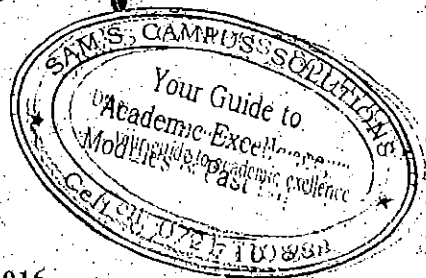

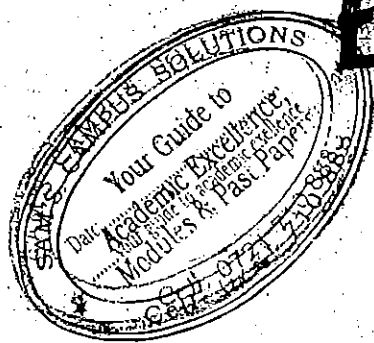

5. a) Discuss FIVE ways through which a person can change their social status through education. (15 marks)

b) Discuss FOUR implications of integrating ICTs in education. (8 marks)

SECOND SEMESTER EXAMINATION FOR THE DEGREE OF
BACHELOR OF EDUCATION

EFN 204: SOCIOLOGY OF EDUCATION

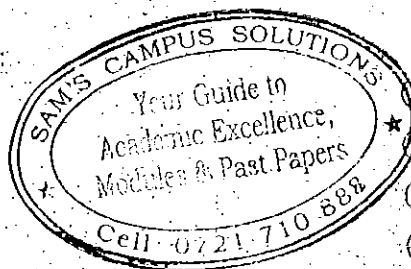

DATE: Thursday, 31st March 2016

TIME: 11.00 a.m. - 1.00 p.m.

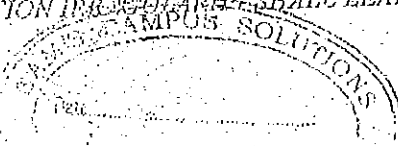

INSTRUCTIONS:

Answer question one and any other two.

1. (a) Define the following key concepts:
 - (i) Sociology (3 marks)
 - (ii) Socialization process (3 marks)
 - (iii) Sociological perspective (3 marks)
 - (iv) Sociology of education (3 marks)
- (b) Discuss why Sociology of Education is viewed as a branch of sociology and not of education. (4 marks)
- (c) Discuss any two theories of Sociology of Education. (8 marks)
2. "Education plays a critical role in social change and modernity" Discuss this proposition. (23 marks)
3. (a) Discuss how the inequalities based on the following, affect the educational life chances of children in Kenya: (13 marks)
 - (i) Socio-economic background
 - (ii) Gender
 - (iii) Disability
 - (iv) Geographical region of origin
- (b) What strategies can be applied to level the educational playing ground of children in Kenya. (5 marks)
- (c) Discuss five key ways that schools encourage over socialization of socializees today. (5 marks)

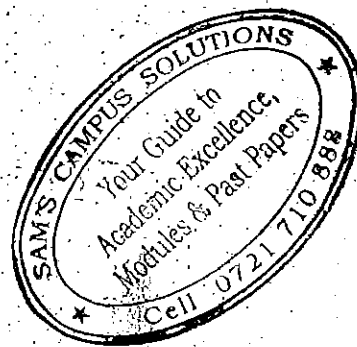

INVOLVEMENT IN ANY EXAMINATION IMPROPERLY SHALL LEAD TO DISCONTINUATION

1105 473

4. (a) What is educational research? (3 marks)
- (b) Using relevant examples explain five key reasons why research differs from other methods of acquiring information. (5 marks)
- (c) Discuss five key contributions of research in sociology of education today. (5 marks)
- (d) Discuss five key reasons why related literature review is important in research. (5 marks)
- (e) Examine five key reasons why research ethics are important in research in education. (5 marks)
5. (a) Define teacher professionalism. (5 marks)
- (b) Examine five salient features of education that has the potential to develop human society today. (5 marks)
- (c) Using relevant examples assess the relationships between education and society today. (5 marks)
- (d) Discuss six adjustments teachers have to make in the way they play their roles to respond to changes within their societies. (8 marks)

education and society

KENYATTA UNIVERSITY

EXAMINATION FOR THE DEGREE OF BACHELOR OF EDUCATION

EFN 204: SOCIOLOGY OF EDUCATION

2ND SEMESTER 2020/2021

TIME: 2 HOURS

INSTRUCTIONS:

Answer Question One and any other two questions.

Question One (30 marks)

- (a) Differentiate between the following concepts using relevant examples:
- (i) Education and the family as social institutions (3 marks)
 - (ii) Material and non-material culture (4 marks)
 - (iii) Role of Emile Durkheim and Auguste Comte in the development of Sociology of Education. (4 marks)
 - (iv) Social norms and social values (4 marks)
- (b) Discuss **five (5)** applications of the structural functionalism theory to the Kenyan education system. (15 marks)

Question Two (20 marks)

- (a) Define and examine the role of sociological perspective in education and schooling. (5 marks)
- (b) Describe reasons why sociological perspective may be critical in the implementation of CBC. (5 marks)
- (c) Assess the concerns of Sociology of Education showing the relevance of theory and practice in education today. (5 marks)
- (d) Critically evaluate the contributions of symbolic interactionism theory in promoting quality teaching and learning in competency value-based curriculum. (5 marks)

Question Three (20 marks)

- (a) Assess the features of a school as a formal social organization in contemporary society. ✓ (10 marks)
- (b) Assess the role of a socializees/learner in a formal school classroom showing how they can promote competencies in CBC. ✓ (10 marks)

Question Four (20 marks)

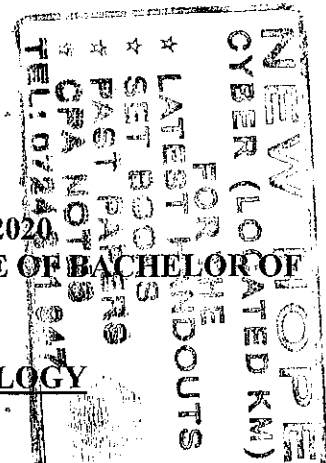

- (a) Describe the term deviance and give examples as understood by social labeling theorists. (5 marks)
- (b) Discuss the role of Education as an instrument for social change. (5 marks)
- (c) Illustrate any **FIVE** manifestations of gender inequalities in education. (10 marks)

Question Five (20 marks)

- (a) Suggest any **FIVE** ways of leveraging education as a tool to achieve gender equality. (10 marks)
- (b) Discuss using examples the functions of the school organization in the society. (5 marks)
- (c) Explain with illustrations the non-desirable roles of the school in the society. (5 marks) ✓

FIRST SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
EDUCATION
EPS 100: INTRODUCTION TO PSYCHOLOGY

DATE: TUESDAY, 3RD DECEMBER, 2019

TIME: 2.00 P.M. - 4.00 P.M.

INSTRUCTIONS:

Answer Question **ONE (COMPULSORY)** and other **TWO** Questions

1.
 - (a) Explain three sources of frustration. (3 marks)
 - (b) Distinguish between the following pair of terms as used in psychology (6 marks)
 - (i) Stimulus generalisation and Spontaneous recovery
 - (ii) Fixed interval reinforcement and fixed ration reinforcement
 - (iii) Punishment and Reinforcement
 - (c) State three advantages of introspection as used by structuralists (3 marks)
 - (d) State three reasons why psychology is considered a science. (3 marks)
 - (e) Describe three types of motives experienced by humans. (6 marks)
 - (f) Explain three functions of emotions. (6 marks)
 - (g) Identify three advantages of experimental method in psychological research. (3 marks)
2.
 - (a) Using relevant examples, describe the following theories of intelligence. (8 marks)
 - (i) Spearman's G and S factor
 - (ii) Cattell's Fluid and Crystallized intelligence
 - (b) With reference to the twin study method, discuss the relative roles of heredity and environment in determining intellectual development. (8 marks)
 - (c) Differentiate between the concepts mental age and chronological age, and calculate the chronological age of a child whose mental age is 8 and has an IQ of 110. (4 marks)

3.

Distinguish between sensation and perception.

(4 marks)

(b) Discuss four factors that influence human perception.

(8 marks)

(c) Using relevant examples, explain four long term psychological defense mechanisms used by human beings to cope with frustration.

(8 marks)

4.

(a) Explain the following branches of psychology

(i) Cognitive psychology.

(2 marks)

(ii) Educational psychology

(2 marks)

(b) Using relevant examples, explain the relevance of Abraham Maslow's hierarchy of human needs to a student.

(8 marks)

(c) Citing relevant examples, discuss four types of psychological conflicts.

(8 marks)

EDUCATION

EPS 100: INTRODUCTION TO PSYCHOLOGY

DATE: Monday, 22nd July 2019

TIME: 2.00pm - 4.00pm

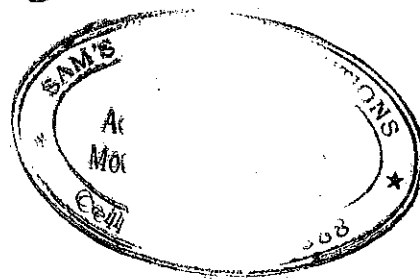

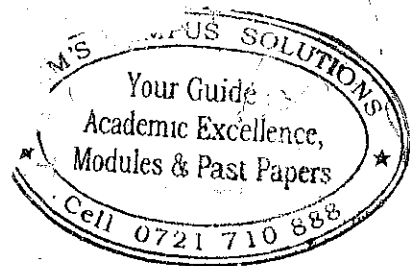

INSTRUCTIONS:

Answer Question ONE and ANY TWO other Questions

- Q. 1 (a) Describe four goals of psychology. (8 marks)
- (b) Distinguish between the following concepts as they are used in psychology. (6 marks)
- Sensation and perception
 - Nature and nurture
 - Psychosis and neurosis
- (c) Give six reasons why psychology is considered a science. (6 marks)
- (d) Explain introspection and identify four of its advantages according to structuralists. (5 marks)
- (e) Explain two components of emotions. (2 marks)
- (f) Highlight three advantages of experimental research. (3 marks)
- Q2. (a) Define intelligence. (2 marks)
- (b) Describe five structures of intelligence. (10 marks)
- (c) Discuss four causes of mental retardation among learners. (8 marks)

- Q3. (a) Using appropriate examples, explain any two anxiety disorders. (4 marks)
- (b) Discuss the following long term defense mechanisms used by people to cope with frustrations. (8 marks)
- i. Intellectualization
 - ii. Reaction formation
 - iii. Compensation
 - iv. Suppression
- (c) Citing relevant examples, describe four psychological conflicts. (8 marks)
- Q4. (a) Explain two principles of classical conditioning. (4 marks)
- (b) Discuss four schedules of partial reinforcement. (8 marks)
- (c) Explain four types of perceptual constancies. (8 marks)

TIME: 11.00 a.m. - 1.00 p.m.

INSTRUCTIONS:

This paper has FOUR questions

Question ONE is compulsory

Answer any other TWO questions

1. a) Explain the term psychology? ✓ (2 marks)
 - b) Describe the focus of the following perspectives in psychology. (6 marks)
 - i) Psychoanalytic perspective
 - ii) Cognitive perspective
 - iii) Behavioral perspective
 - (c) Give **six** reasons why psychology is considered a science. (6 marks)
 - d) Identify **four** disadvantages of using introspection according to structuralists. (4 marks)
 - e) Distinguish between the following concepts as they are used in psychology. (6 marks)
 - i) Sensation and perception
 - ii) Nature and nurture
 - (iii) Psychosis and neurosis
 - f) Explain **three** components of emotions. (6 marks)
-
2. (a) Define intelligence (2 marks)
 - b) Describe **five** structures of intelligence (10 marks)

- 001 2931
- c) Discuss **four** causes of mental retardation among learners (8 marks)
3. a) Using appropriate examples explain any **two** anxiety disorders (4 marks)
- b) Discuss **four** long term defence mechanisms used by people to cope with frustrations. (8 marks)
- c) Explain **four** types of perceptual constancies (8 marks)
4. a) Explain **four** principles of classical conditioning (8 marks)
- b) Citing relevant examples, describe three psychological conflicts (6 marks)
- c) Discuss the original Maslow's hierarchy of needs highlighting its implications in the learning process (10 marks)

UNIVERSITY EXAMINATIONS 2016/2017

THIRD SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
EDUCATION

EPS 100: INTRODUCTION TO PSYCHOLOGY

DATE: FRIDAY 21ST JULY 2017

TIME: 2.00 P.M. - 4.00 P.M.

INSTRUCTIONS:

This paper has FIVE questions. Answer question ONE and any other TWO Questions

SECTION A: COMPULSORY (30 MARKS)

- 1(a) Identify six reasons why psychology is considered a science. (6 marks)
- (b) Distinguish between the following pairs of terms as they are used in psychology.
 - (i) Absolute threshold and difference threshold.
 - (ii) Overt behavior and covert behavior.
 - (iii) Independent and dependent variable (6 marks)
- (c) Give five disadvantages of using introspection as a method of gathering information. (4 marks)
- (d) Explain three differences between classical and operant conditioning. (6 marks)
- (e) Using relevant examples, describe the following types of extra sensory perception. (8 marks)
 - (i) Telepathy
 - (ii) Clairvoyance
 - (iii) Psychokinesis
 - (iv) Teleportation

SECTION B

Answer any TWO Questions. Each Question is 20 marks.

- 2(a) Define psychosis. (2 marks)
- (b) Explain any four anxiety disorders. (8 marks)
- (c) Discuss the various ^{levels} steps in the Abraham Maslow's hierarchy of human needs. (10 marks)
- 3(a) Distinguish between sensation and perception. (2 marks)
- (b) Citing relevant examples, explain four types of perceptual constancies. (8 marks)
- (c) Discuss five factors that affect human perception. (10 marks)
- 4(a) Define intelligence. (2 marks)
- (b) Discuss the structure of intelligence. (10 marks)
- (c) Explain any four long term defence mechanisms commonly used by students to cope with failure of examinations. (8 marks)
- 5(a) Define frustration. (2 marks)
- (b) Citing relevant examples, discuss four psychological conflicts. (8 marks)
- (c) Explain any five functions of emotions to a human being. (10 marks)

UNIVERSITY EXAMINATIONS 2016/2017

**FIRST SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
EDUCATION AND BACHELOR OF ARTS**

EPS 100: INTRODUCTION TO PSYCHOLOGY

DATE: Wednesday 23rd November 2016

TIME: 2.00p.m -4.00p.m

INSTRUCTIONS:

This paper has FIVE questions. Question ONE is compulsory. Answer any other TWO questions from section B.

SECTION A: COMPULSORY - 30 MARKS

Attempt all the questions in this section.

QUESTION ONE

- a) Identify any four goals of studying psychology [4marks]
- b) Identify the main method used by structuralists to study mental processes and cite any three limitations of the method. [4marks]
- c) Distinguish between the following terms as they are used in psychology;
 - i) Nature and Nurture
 - ii) Sensation and perception [6marks]
 - iii) Psychosis and neurosis
- d) Explain any two advantages of using the survey method in psychological research. [4marks]
- e) Using relevant examples, explain three types of psychological conflicts. [6marks]
- f) Discuss the three components of emotions. [6marks]

INVOLVEMENT IN ANY EXAMINATION IRREGULARITY SHALL LEAD TO DISCONTINUATION

SECTION B: ANSWER ANY TWO QUESTIONS IN THIS SECTION. ALL QUESTIONS CARRY EQUAL MARKS

QUESTION TWO

- a) Explain any two principle characteristics of classical conditioning [2marks]
- b) Using suitable examples, explain any four factors that affect learning [8marks]
- c) Explain the general structure of intelligence [10marks]

QUESTION THREE

- a) Using appropriate examples, explain any two perceptual constancies [4marks]
- b) Discuss any three phenomena that are classified by parapsychologist as extra sensory [6marks]
- c) Explain any five factors that influence human perception [10marks]

QUESTION FOUR

- a) Explain two characteristics of a motivated behaviour [4marks]
- b) Explain three types of motives [6marks]
- c) Use a relevant example to explain the five steps of the original Abraham Maslow's hierarchy of needs. [10marks]

QUESTION FIVE

- a) Explain the concept of abnormality from any five perspectives [10marks]
- b) Use a relevant example to explain the following defense mechanisms:
 - i) Reaction formation
 - ii) Displacement
 - iii) Repression [10marks]
 - iv) Compensation
 - v) sublimation

EPS 100: INTRODUCTION TO PSYCHOLOGY

DATE: THURSDAY 27TH AUGUST 2015

TIME: 4.30 P.M. – 6.30 P.M.

INSTRUCTIONS:

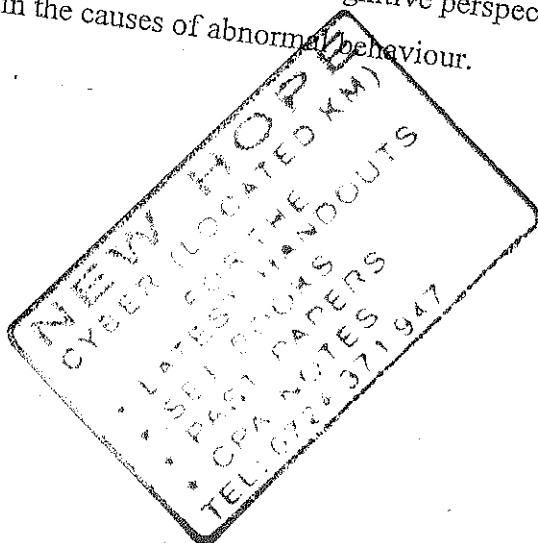

This paper has Four Questions. Question ONE is Compulsory.
Answer any TWO questions from section B

- a) Identify any **three** reasons why teachers need to study psychology (3 marks)
- b) Why is Psychology considered a science? (8 marks)
- c) Using relevant examples, **distinguish** between the following terms as they are used in psychology:
 - i) Nature and Nurture
 - ii) Positive reinforcement and Negative reinforcement (6 marks)
 - iii) Social intelligence and Emotional intelligence
- d) Give any **three** disadvantages of using the observational method in psychological research. (3 marks)
- e) Using appropriate examples, explain any three factors that affect perception. (6 marks)
- f) Give any **four** functions of emotions. (4 marks)

SECTION B

Answer any two questions. All the questions carry equal marks (20 marks)

- 2.1
- a) Explain the key determinants of intelligence (4 marks)
 - b) Compare and contrast classical and operant conditioning (6 marks)
 - c) Explain the Abraham Maslow hierarchy of needs in relation to learning (10 marks)
-
- a) What is perceptual constancy? (2 marks)
 - b) Explain **four** perceptual constancies as explained in Gestalt psychology (8 marks)
 - c) There is no perception without sensation. Discuss this using relevant examples. (10 marks)
-
- a) Using appropriate examples, explain any three sources of frustration. (6 marks)
 - b) Discuss any **five** long-term defence mechanisms used by people to cope with frustration. Give an example for each. (10 marks)
 - c) Explain the Behavioral and cognitive perspectives or models that attempt to explain the causes of abnormal behaviour. (4 marks)

KENYATTA UNIVERSITY

UNIVERSITY EXAMINATIONS 2019/2020

**FIRST SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
EDUCATION**

EPS 200: DEVELOPMENTAL PSYCHOLOGY

DATE: Friday 6th December 2019

TIME: 8.00a.m -10.00a.m

INSTRUCTIONS:

1. This paper has FIVE questions
2. Question ONE is compulsory
3. Answer any two other questions

SECTION A

QUESTION ONE

- a) Distinguish the following terms as used in Developmental psychology. [4 marks]
 - i) Growth
 - ii) Development
- b) Outline four rights of a child declared by the United Nations Organization (1959). [4 marks]
- c) State Locke's contribution to child psychology as a scientific discipline. [4 marks]
- d) Describe adolescent's moral development according to Lawrence Kohlberg. [4 marks]
- e) Explain two support systems that develop during the embryonic stage. [4 marks]
- f) Explain independence and responsibility as developmental needs. [4 marks]
- g) Give three conditions which may harm the baby during prenatal period. [3 marks]
- h) State three reasons why peer relations are important to an adolescence. [3 marks]

SECTION B

QUESTION TWO

- a) Describe four types of play. [8 marks]
- b) Explain the role of play in social and cognitive development of children. [8 marks]
- c) State four factors that have led to decline of social play in the contemporary society. [4 marks]

QUESTION THREE

- a) Describe the characteristics of the sensorimotor stage according to Jean Piaget. [8 marks]
- b) State six developmental tasks at infancy according to Havirghurst. [6 marks]
- c) Describe the holophrastic stage of language development. [6 marks]

QUESTION FOUR

- a) Describe the physical and psychological changes during adolescents. [8 marks]
- b) Explain the psychological effects of early and late maturation in both boys and girls. [8 marks]
- c) What factors influence the development of identity in adolescents. [4 marks]

QUESTION FIVE

- a) Describe the last three stages of personality development according to Erick Erickson. [9 marks]
- b) Explain the following concepts as they relate to adulthood. [6 marks]
 - i) Midlife crisis
 - ii) Menopause
 - iii) Climacteric syndrome
- c) Describe five physical changes in the late adulthood. [5 marks]

FIRST SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
EDUCATION AND BACHELOR OF ARTS

EPS 200: DEVELOPMENTAL PSYCHOLOGY

DATE: Wednesday, 16th June 2021

TIME: 2.00p.m-4.00p.m

INSTRUCTIONS:

1. This paper has FOUR questions
2. Question ONE is Compulsory
3. Answer any TWO other Questions

Question One

- (a) What do we mean when we say that development is multi-directional? (3marks)
- (b) State the four identity statuses proposed by James Marcia (4marks)
- (c) Identify three reflexive behaviours of the neonate (3marks)
- (d) Give four achievements of the children in the concrete operational stage according to the Piaget's Cognitive Development Theory. (4marks)
- (e) Distinguish the following concepts applied in the middle adulthood (4marks)
 - (i) Climacteric syndrome
 - (ii) Midlife crisis
- (f) Explain the following terms as relates to language development (6marks)
 - (i) Motherese
 - (ii) Overextension
 - (iii) Overregularization
- (g) Identify two challenges faced by adolescents and state how they can be resolved (4marks)
- (h) Explain three developmental tasks of early childhood according to Havighurst (6marks)

Question Two

- (a) Compare and contrast the contributions of John Locke and Jean Jacques Rousseau concerning child development. (8marks)
- (b) Explain three contributions of the Child Research Institutes to the historical development of child development. (6marks)
- (c) Discuss three reasons why the study of child development is important to a teacher. (6marks)

Question Three

- (a) Describe the support structures that are formed during the embryonic stage of prenatal development. (8marks)
- (b) Describe 4 ways in which play enhances the motor development of the child (6marks)
- (c) Explain 4 constraints that may be encountered as parents and teachers try to satisfy the child's right to full opportunity for play and recreation. (8marks)

Question Four

- (a) Using appropriate examples, describe the first five stages of Erik Erikson's theory of personality development. (10marks)
- (b) What is the relevance of Erik Erikson's theory of personality development to child development? (10 marks)

KENYATTA UNIVERSITY

UNIVERSITY EXAMINATIONS 2017/2018

SECOND SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
EDUCATION, BACHELOR OF ARTS AND BACHELOR OF SCIENCE

UCU 100: COMMUNICATION SKILLS

DATE: Friday, 27th July 2018

TIME: 2.00 p.m. - 4.00 p.m.

INSTRUCTIONS:

1. Candidates **MUST** write their registration number in the space provided on each answer booklet.
2. There are four (4) questions in this paper. Candidates **MUST** answer **ALL FOUR** questions.
3. There is a separate question 2B for visually impaired student **ONLY**.
4. All answers **MUST** be written in the answer booklet provided

Question One

READING COMPREHENSION

(25 MARKS)

Read the passage below and answer the questions that follow it.

1. Call it the case of the missing women---more than a 100 million of them, to be exact. It is a curiosity of human biology that women are hardier than men and thus outnumber their male counterparts in the United States, Europe and Japan. In much of Asia, North Africa and parts of Latin America, the opposite is true. In all of South Asia, for example, females constitute less than 47 percent of the population versus 52.2 percent in industrialized countries. There is a plethora of complex factors that include poor health care and outright violence against women and girls, adding up to pervasive neglect of females in many heavily populated nations. Harvard economist Amartya Sen concludes that well over 100 million women are in effect "missing" from the planet ---the presumed victims of premature and preventable deaths

2. The consequences of social justice are self-evident but less well understood in the west are the global economic costs of such widespread female deprivation. Of the 1.3 billion people living in poverty worldwide, a staggering 70 percent are women as noted by the United Nations Development Program. Thus the surest route of catapulting nations out of poverty is to end the cycle of female neglect. . . It may well be that giving women a leg up in education, entrepreneurship and political power could pay-off in priceless benefits ---ranging from slower population growth and higher incomes to healthier families.

3. In the developing world, women not only clearly face a host of social and cultural obstacles, but they are also hurt by a simple economic calculus. On average, women globally earn 30 to 40 percent less than men; because their daughters will earn less, parents in poor countries often invest in them less than they do in their sons, especially in education and health care. The ensuing vicious cycle of underinvestment ultimately exacts a huge toll on nations. Research evidence has shown that better educated women are more likely to have fewer children, seek health care when needed, earn more money and plough more resources into educating their offspring. A recent World Bank analysis suggests that providing 1000 girls in India with an extra year of primary schooling would cost a mere \$32,000 yet would prevent the premature death of two women and 43 infants as well as avert 300 births. Another concludes that if women in Kenya, who make up the majority of the nation's farmers, were educated on a par with Kenyan men, food crops yields would increase by more than a fifth ...

4. Most crucial would be increasing women's capacities to be agents of change rather than merely recipients of greater help from others, says economists Sen. He points to the Indian state of Kerala, where property inheritance among an elite group passes through the female line. Perhaps it is no coincidence that this state has the most developed school system in India, and that the ratio of females to males approaches that of United States and Europe.

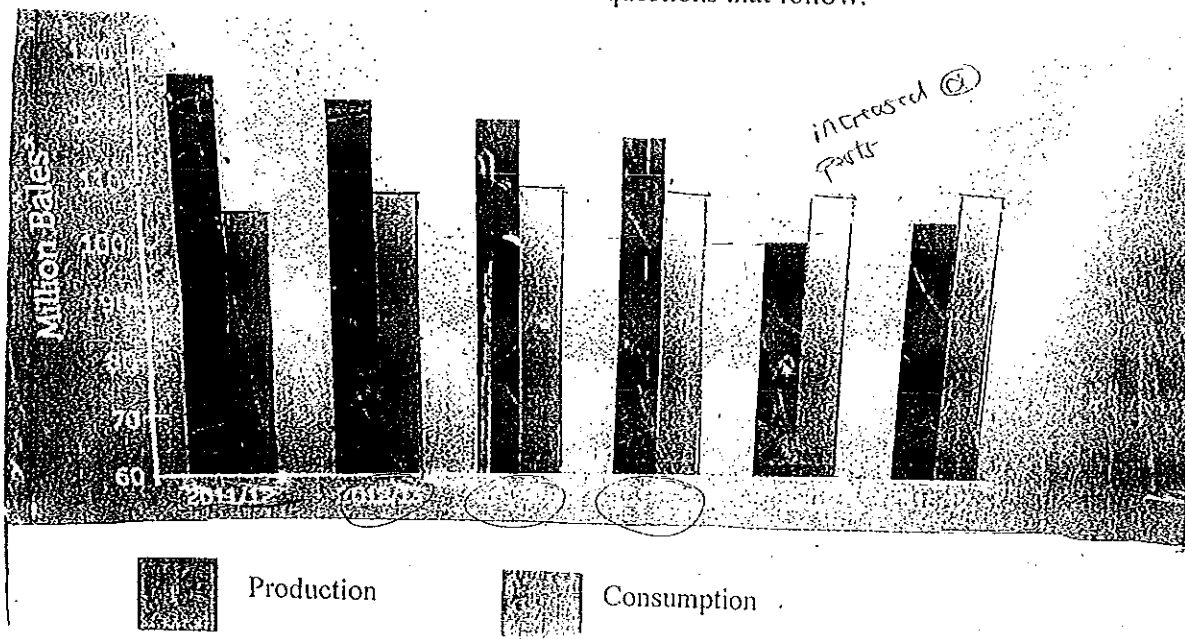

- (a) In one line, describe the purpose of this passage. (2 Marks)
- (b) Explain the main contrast being expressed in paragraph one. (2 Marks)
- (c) Explain the sense in which 100 million are said to be "missing" (3 Marks)
- (d) Why did the writer bring in the Harvard economist Armatya Sen in his writing? (3 Marks)
- (e) What does writer mean by "pervasive neglect"? (3 Marks)
- (f) State two examples of women neglect from the passage (3 Marks)
- (g) In not more than 3 lines explain the vicious cycle relating to the women problem being discussed. (3 Marks)
- (h) Give one example of successful effort to change the status quo of women (3 Marks)
- (i) What is the most important approach in assisting women as per the passage?(3 Marks)

Question Two

a) TRANSCODING AND INTERPRETATION OF TABLES AND GRAPHS

(15 MARKS)

Study the figure shown below and answer the questions that follow.

Source: United States of Agriculture (USDA) (2016) Cotton Outlook, Agricultural Outlook Forum, Virginia: USDA

*1 bale of cotton: 500lbs(net) or 022679625 tonnes

- i) Suggest a suitable title of this figure (2 Marks)
- ii) List three years which seem to have almost the same global cotton consumption (3 Marks)
- iii) Calculate the surplus of bales left after consumption during the 2011/2012 year. (3 Marks)
- iv) Since one bale of cotton= 500 pounds, calculate by how many pounds the consumption of cotton exceeded production in 2015/2016 (3 Marks)
- v) In not more than three well constructed sentences explain why you think the global consumption of cotton suddenly exceeds supply in the years shown in the above figure. (4 Marks)

b) TRANSCODING AND INTERPRETATION OF TABLES AND GRAPHS
(FOR VISUALLY CHALLENGED STUDENTS ONLY) (15 MARKS)

Study the table shown below and answer the questions that follow.

S/NO	CLUSTERS	COUNT	PERCENT
1.	Agriculture , Forestry and Fisheries	903	6%
2.	Architecture	231	1%
3.	Business and Administration	3,082	19%
4.	Computing	893	6%
5.	Education (Arts)	1,465	-
6.	Education (Science)	152	-
7.	Engineering	762	5%
8.	Environment	512	3%
9.	Health and Welfare	1,753	11
10.	Humanities and Arts	1,635	10%
11.	Journalism and Information	360	2%
12.	Law	376	2%
13.	Life and Physical Sciences	1,515	9%
14.	Manufacturing	50	%
15.	Mathematics and Statistics	515	3%
16.	Security and Conflict Resolution	128	1%
17.	Services	196	1%
18.	Social and Behavioral Sciences	1,002	6%
19.	Teacher Training	127	1%
20.	Veterinary	202	1%
21.	Other	141	1%
	TOTAL	16,001	100%

- a) Suggest a suitable title of this table (2 Marks)
- b) List four clusters which have the highest level of staff (4 Marks)
- c) Calculate the percentage of staff in
 - i. Education Arts cluster
 - ii. Education Science cluster (2 Marks)
- d) Which clusters have academic staff proportion ranging between 3-5%? (3 Marks)
- e) In not more than three well constructed sentences explain why Business and Administration cluster seems to be the highest proportion of academic staff. (4 Marks)

Question Three

LIBRARY SKILLS

(20 MARKS)

- a. State two reasons for acknowledging sources of information within an essay. (6 Marks)
- b. Briefly discuss the difference between a personal author and corporate author. (4 Marks)
- c. Re-write the following references as they would appear in a bibliography using the American Psychological Association (APA) style:
 - i. Title: Fitly spoken :Developing effective communication and social skills
 - Author: Greg S. Baker
 - Year: 2011
 - Place: Chadler, AZ
 - Publisher: Brighton (5 Marks)
 - ii. Title: Dynamic Memory Success In Exams With Better Marks
 - Author: Vijay Anand
 - Year: 2014
 - Place: New Delhi
 - Publisher: Diamond Books (5 Marks)

Question Four

STUDY SKILLS

(10 Marks)

- a) As a University student, you must plan how to use your time.
- i. List two strategies that you have used to organize your time this semester.
(2 Marks)
 - ii. Write four activities that you would insert in your study schedule.
(4 Marks)
- b) Identify and briefly explain four factors you should consider in choosing a place of study.
(4 Marks)

KENYATTA UNIVERSITY

UNIVERSITY EXAMINATIONS 2016/2017

THIRD SEMESTER EXAMINATION FOR THE DEGREE OF BACHELOR OF
EDUCATION, BACHELOR OF SCIENCE AND BACHELOR OF ARTS

UCU 100: COMMUNICATION SKILLS

DATE: Monday, 31st July 2017

TIME: 11.00a.m-1.00p.m

INSTRUCTIONS:

Answer ALL questions

1. READING COMPREHENSION

(25marks)

Read the passage below and answer questions a to j

1 Any student with ability to make the appropriate subject choice can be regarded to have hit the educational minefield. College subjects today are very much like a menu in the restaurant. Some subjects can be compared to the most nutritious, delicious and expensive items on the menu while others on the other hand may be termed to rank low. In most colleges, there are different subject offerings but for a strong education, two categories of knowledge and skills are necessary. These are the disciplinary knowledge and skills and the other is the generic skills category. The generic skills category are today considered to be extremely important and form what are commonly referred to as 21st century skills including such attributes as communication, critical and creative thinking and collaboration, also known in some quarters as the 3Cs. The demand for 21st century skills has increased due to the changing nature of our societies where the ability to communicate effectively, the ability to think outside the box and the ability to work well in a team are critical soft skills.

2. There are several factors to be considered when choosing a subject. Key among these is the intellectual ability of the student, the potential of the student to attain a specific level of competence with a given amount of training, the level of interest in the subject and ones determined career prospects. In order to make wise subject choice, students ought to seek advice from their parents or teachers, the career guidance office or by research that helps them to analyze the requirements of their specific career. It should be noted, however, that things are not as simple as they are presented here. There are many students who succeed in a given subject even when they had no interest in the subject or specific career at the beginning. Such students usually are able to understand that attitude is powerful for success. We know of the common motivational saying that says, "if nature gives you a lemon, make lemonade". Career success is not the guaranteed outcome of careful subject choice. Beyond personal interest are also socio-economic factors of demand and supply. The first degree usually can be for most graduates just a stepping stone, the eye opener to the world of many possibilities. Students with strong generic attributes will find this very true. Most employers look for such graduates as these are easy to retrain.

3. The family background can have great impact on career or subject choice due to economic capital and social class factors. Choice of subject at secondary and tertiary level was examined using experimental approach with the 1958 "British Birth cohort" in attempt to better understand the role of family background. The experimental analysis demonstrated that pupils from elevated social-class backgrounds attained a higher standard in both scientific and humanities subjects in primary and secondary level. Moreover pupils from professional class were most probable to opt for medicine and law subjects at tertiary level (Alice Sullivan, Herman G. Van De Werfhorst, Sin Yi Cheung, 2013).

4. Many studies have been conducted previously to investigate the factors that affect subject choice at secondary level and there were a few studies which have tried to test the relative influence of these factors. The early interest in a student may have a great impact on the subject choice (Hutchings, 1963). The perceived difficulty in some subject is considered to be as one of the major factors (Ashton & Meredith, 1969; Ormerod & Duckworth, 1975). The most important factors that contribute to the student's preference towards a subject area are found to be an interesting course and a good teacher (Johnstone, 1974). A study using the graded-response system to identify the factors affecting the subject choice was conducted on a sample of 89 boys and 88 girls. Factors such as career value, parents' advice, level of difficulty of the subjects were identified (Linda Garatt, 1985). Further investigation needs to be done for student's subject choice at Tertiary level.

5. Many researches carried out in the education field have shown that parents with superior socio-economic class are more concerned with their children's education than parents with inferior socio-economic class. The greater concern of parents results in growth of positive student's attitude toward classes, school and even in improvement of educational accomplishment (Epstein, 1887; Lareau, 1987). Low socio-economic status has a negative impact on educational achievement in that it prevents pupils from accessing a variety of learning equipment and resources (Majoribank, 1996; Jeynes, 2002).

- (a) Suggest a suitable title for the passage. (2marks)
- (b) Identify one metaphor in paragraph one. (3marks)
- (c) What is another phrase from paragraph one that means the same as soft skills. (3marks)
- (d) Explain the meaning of "if nature gives you a lemon make lemonade" from the context of this passage. (3marks)
- (e) Apart from seeking help from parents and college career offices, what else can a student do to improve career choice. (2marks)
- (f) What does the author mean by 1958 "British Birth Cohort". (3marks)
- (g) What two factors are Key in a student's preference for a subject area? (3marks)

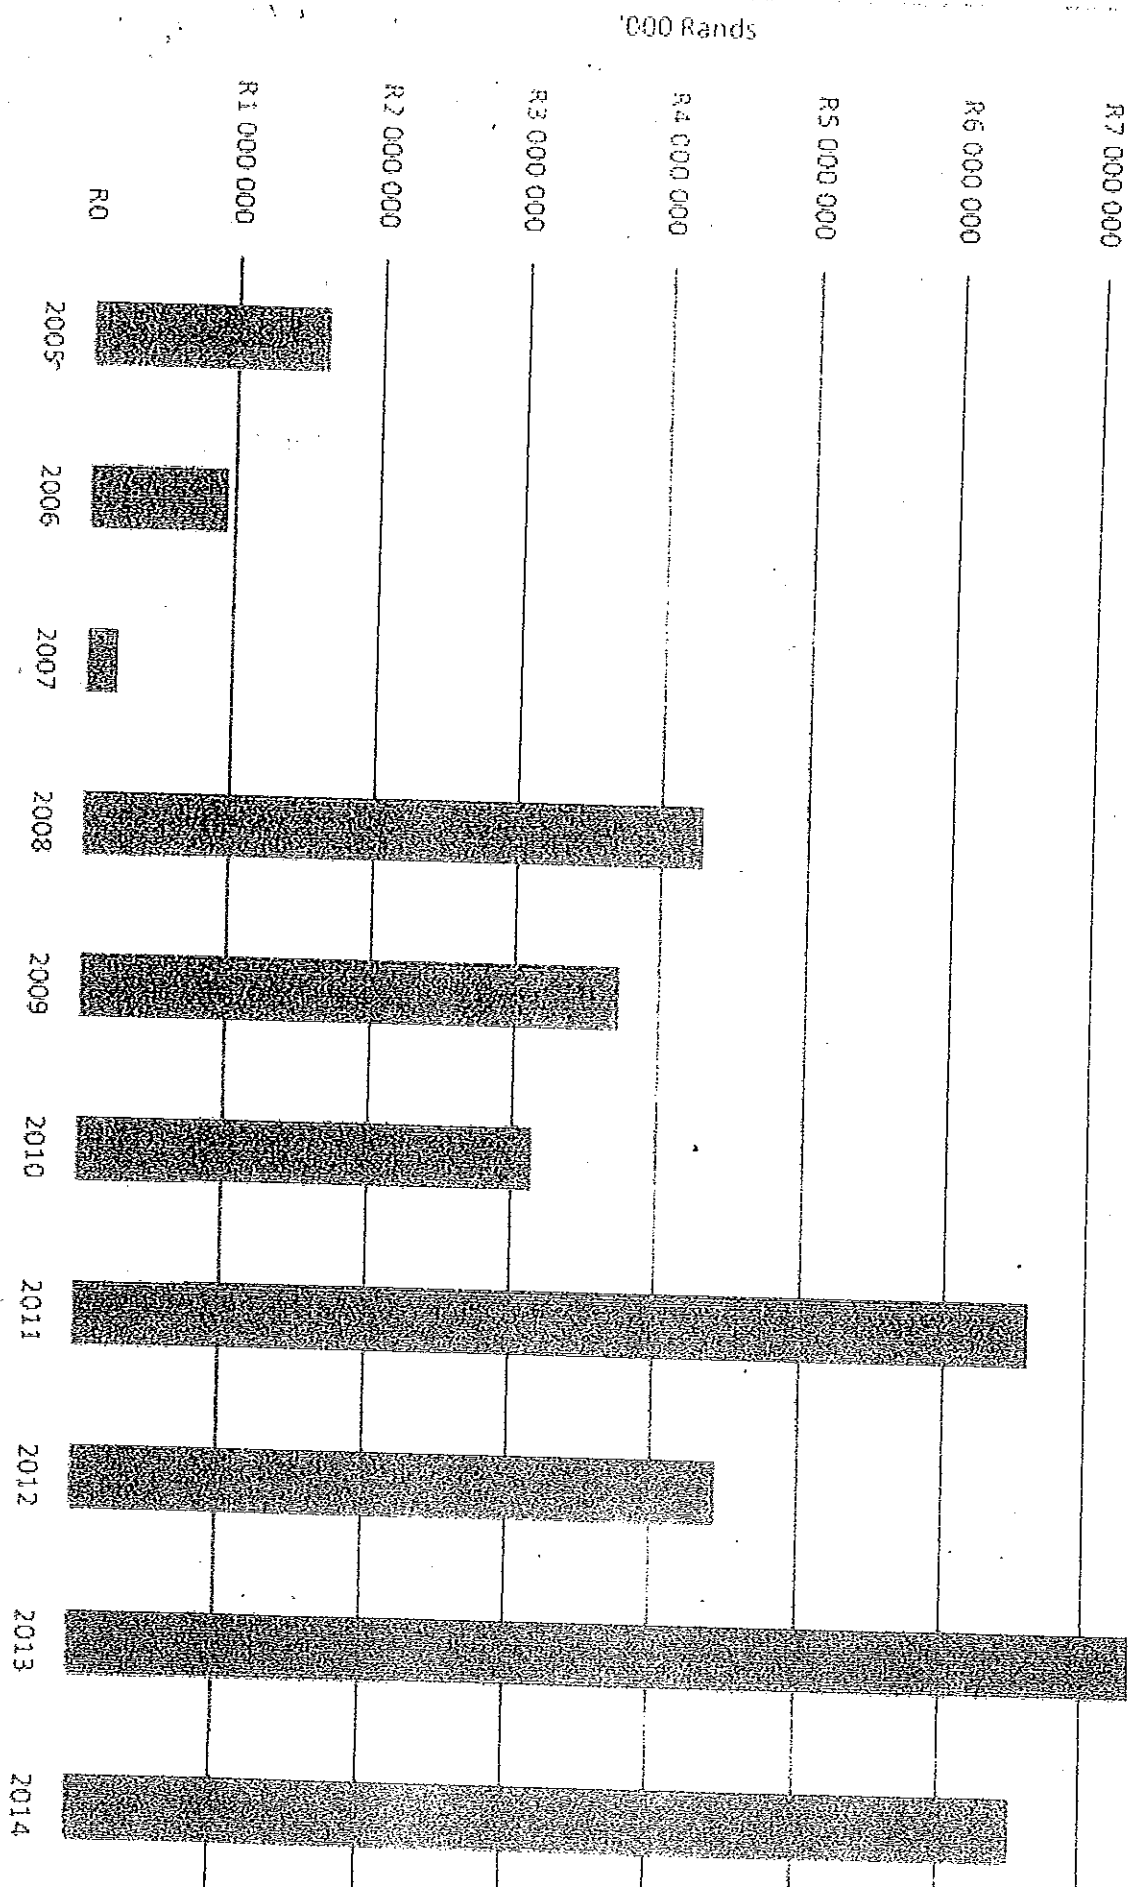

(h) Identify the research approach used to understand the role of family background in career choice. (3marks)

(i) Explain how parents may differ in children's career choice. (3marks)

2. TRANSCODING AND INTERPRETATION OF TABLES , GRAPHS

(a) FOR NORMAL SIGHTED STUDENTS ONLY. Study graph 1 and answer questions below it

Graph 1: South Africa's maize in rand value.

- (a) How is the value of maize represented? (2marks)
- (b) Express the value of maize in 2007 as a fraction of that of 2005. (3marks)
- (c) What is the total value in rands of maize of the first two odd years? (3marks)
- (d) Identify the period of greatest value of maize? (2marks)
- (e) In 3 grammatically correct sentences, comment on the trend in maize value.(5marks)

2(b)QUESTION FOR VISUALLY CHALLENGES STUDENTS ONLY. Read the table 3 below and answer questions a to c

TABLE 3

Table 3. Energy production by major source from 1960 to 1980 ¹					
Year	Total production (quad Btu)	Percent production			
		Coal	Petroleum	Natural gas	Other ²
1960	41.5	26.1	36.0	34.0	3.9
1970	62.1	23.5	32.9	38.9	4.7
1980	64.8	28.7	28.2	34.2	8.9

¹ Source: U.S. Energy Information Administration, *Annual Energy Review*

² Includes hydropower, nuclear power, geothermal power, and others.

- (a) Name one type of energy represented in the table. (3marks)
- (b) State the period covered in the table. (3marks)
- (c) Subtract energy production of Natural gas in 1960 from that of 1980 (2marks)
- (d) What is the total amount of coal produced in the period stated? (2marks)
- (e) In three grammatically correct sentences, comment on the trend given in the table. (5marks)

3. LIBRARY SKILLS(20MARKS)

- (a) Outline the steps you would use to identify a book in the library whose author is known. (5marks)
- (b) Arrange the following bibliographic details as they would appear using APA style;-
 - (i) Business studies 1989 Cassell Publishers Ltd. London ,Vaughan James. (2marks)
 - (ii) Hong Kong Macmillan Education Ltd. 1982 Mastering study skills, R. Freeman. (2marks)

- (iii) 3rd ed. Statistics for the Teacher . A.C Crocker 1981. NFER NELSON
Publishing company Ltd London. (2marks)
 - (iv) Paris. UNESCO.1967. The costing of Educational plans. UNESCO .(2marks)
 - (v) Blalock,H.M. Mc.Graw Hill book company. 1972. Social Statistics: A Text for
Beginners. New York-
(2marks)
- (c) Rewrite the references in 'b' above as they would appear in a bibliography of an
academic paper. (5marks)

4. STUDY SKILLS(10MARKS)

- (a) Write five study activities you would carry out when preparing to do
examinations. (5marks)
- (b) Explain how to form a study group . What benefits do you get from a study
group? (5marks)
